## Reagan Backs Down From Data Base Scheme

By Bill Laberis  
CW Staff

WASHINGTON, D.C. — The Reagan administration has backed down from a plan to create a computerized data base of all the nation's welfare recipients. The move follows allegations that the proposed plan violated constitutionally guaranteed privacy rights.

Instead, the U.S. Department of Health and Human Services is now proposing a vastly scaled-down version of the plan to detect welfare

cheats.

The new proposal, which may not involve the creation of any new computerized files, seeks to allow local welfare agencies to access the files of four major federal agencies: the Social Security Administration, Office of Personnel Management, Veterans Administration and Railroad Retirement Board.

This plan differs greatly from drafts of the original proposal for a National Recipient Information System. (Continued on Page 6)

## A Business-Like NCC: Suits Replace Sandals

CHICAGO — The maturing of the computer community was evident here last week as pinstripe suits and leather briefcases won out over beards and leather sandals as the preferred dress among the more than 73,000 attendees at the National Computer Conference.

The 30th edition of the computer community's annual "rite of spring" also stressed applications of proven systems over flashy new technology, again reflecting the attendees new-found business-like approach.

The maturing of the industry was most evident on the main convention floor — the "penthouse suite" — where the older, more established mainframe and minicomputer vendors were joined by a raft of micro vendors who stressed business over hobby and home applications in their first major penetration of NCC's main exhibit hall.

However, several smaller, newer and perhaps more innovative firms were stuffed into the basement of the cavernous convention hall here — and also received good attention.

But while the exhibits stressed business and proven applications of the computer technology, the technical session program did not keep pace. The program was dominated by the more traditional academic-oriented papers, although some effort was made this time around to give a smattering of sessions that would be of interest to

## Users Want Proven Solutions No Big Product Splashes at Show

By Brad Schultz  
CW Staff

CHICAGO — Perhaps the most significant product announced here last week wasn't even announced at the National Computer Conference — it was announced in a hotel suite rented for the occasion.

At the show itself, few products were introduced. That reflected the tone of the exhibit floor, where the action was business-like as attendees made it clear they wanted to see tried-and-true solutions.

The product introduction with the most pow — a 32-bit minicomputer from Systems Engineering Laboratories, Inc. — was not introduced on the show floor. The Concept 32/87 reportedly benchmarks at three times the rate of the Digital Equipment Corp. VAX-11/780 (see story on Page 8).

Perkin-Elmer Corp. gave NCC attendees more evidence that AT&T's most important penetration into DP shops

may be through software, not the hardware mentioned in federal court dockets.

PE gave its 3230 superminicomputer Bell Laboratories' Unix operating system, which already runs on many DEC systems and is the standard operating system for software development at BBN Computer Corp. The 3230 now has a version of Unix developed by The Wollongong Group under Bell licensing in Palo Alto, Calif., that reportedly supports up to 128 users in multiprogramming, time-shared environment.

Bell is allowed to sell software like Unix, provided it was developed internally to improve efficiency in Bell's voice communications business.

### Media Coverage

Several vendors timed important product announcements for media coverage during the week of NCC. The biggest surprise was Data General

Corp.'s revision of its Xodiac network architecture, which is now compatible with both IBM's Systems Network Architecture. (Continued on Page 10)

## BTI at Top, GA at Bottom In Datapro Mini Ratings

By Tim Scannell  
CW Staff

DELRAN, N.J. — Minicomputers from BTI Computer Systems, Inc. fared better than those from Digital Equipment Corp., Data General Corp. and even IBM in Datapro Research Corp.'s recent annual survey.

But, users told Datapro, machines from General Automation, Inc. leave a lot to be desired in terms of vendor support and software. This marks the second year in a row that GA has managed to crowd the other minicom-

puter contenders out of last place.

As the charts beginning on Page 45 indicate, last year's top winner, Tandem Computers, Inc., slid down to third position, closely trailing BTI and Point 4 Computer Corp.

Although Datapro contacted only six users of BTI's 5000 computer system, the 16-bit multiuser time-sharing minicomputer scored highest in overall user satisfaction with a near-perfect rating of 3.8. Tandem scored a 3.7 in overall user satisfaction, while Point 4

# Higher Software Productivity Linked To Fine-Tuning Development Process

By Marcia Blumenthal  
CW Staff

CHICAGO—Improving software productivity requires the fine tuning of every phase of the development process—from user involvement to selecting the right combination of productivity aids to building maintainability into the design of the system.

That was the view presented by a group of panelists speaking to an overflow crowd at a National Computer Conference session here last week.

Involving users in the development phase will improve productivity tremendously, suggested William Fronk, vice-president and manager of systems technology for Chicago's Continental Bank.

At Continental, users participate in the bank's automation planning process. Basic to this process is homing in on projects that will enhance the overall corporate objective.

Fronk likened this to evaluating an investment portfolio, whereby managers evaluate which investments are

funded and which get dumped.

To do this, managers on the user side who can approve projects should be part of the planning group as well as those managers on the system development side who can commit the re-

## CW at NCC

sources to develop new systems.

Besides management commitment, Fronk said the bank's program has two other criteria—billing users for all system development work and requiring users to submit formal project requests.

"If the users know they will pay, then they examine requests and filter out the less worthwhile ones," Fronk said.

Continental uses a checkpoint process where each stage of the planning process and development is reviewed and approved, before another phase begins. Moreover, users are required to develop the user manual for the

system. This solidifies the design process and is the basis for system walk-throughs which are used to detect conceptual errors in the proposed system, he noted.

Another technique for improving the productivity of system design is selecting a compatible group of productivity tools.

There are many applications development tools on the market, and the DP manager's job is to determine which of these tools work together efficiently, said Jane G. Morse, head of the software engineering unit at Arthur D. Little, Inc. (ADL).

### Dominant Functions

Morse and her team at ADL have devised a matrix for classifying applications according to their dominant computing function. Simply stated, these functions are computing, output, data base management, input and control tasks. For example, a payroll application is one which is output-dominated, she noted. Therefore, in selecting tools for such an application, output features should be most heavily screened.

Applications disasters are generally caused by a bad combination of tools. "If the tools are too complex for the job, then the application takes too much time to develop," she observed. And if the tools used are too simple, they will have to be manipulated too much.

Although most productivity issues address the design phase of an application, maintenance of that application is usually neglected, charged Carma McClure, an assistant professor at Northwestern University.

## NCC Puts on Business-Like Face

(Continued from Page 1)

the real world.

Overall, the more than 525 exhibitors were pleased with the business-like atmosphere and crowds, even though few of them took advantage of the show to announce new products. In fact, the only mainframe announcement came from a firm that did not even exhibit on the floor, using a hotel room to unveil its 32-bit mini (story on Page 8).

Software was on everyone's mind, even though it was not in abundant

evidence on the convention floor in stand-alone booths. However, all the hardware vendors—from Apple and Atari to Burroughs and IBM—stressed their software over the hardware features of the systems on parade.

Of the nearly 3,500 foreign visitors, the Japanese were the most visible; many new Japanese vendors used the show to test the waters of the American marketplace.

Representatives from more than 12 countries attended, including two from the People's Republic of China.

Incorporated."**

### Chart of the Month:

#### Growth of SyncSort OS users

**syncsort**  
INC.

*We didn't hold a press conference to announce that we were changing the name of our company to Syncsort Incorporated. But if we had, we imagine the proceedings might have gone something like this...*

**REPORTER:** Mr. President! Are there any reasons for this name change that weren't covered in your prepared statement?

**PRESIDENT:** No, it's all there. As I mentioned SyncSort has become the best-known sort in the world. It's now used by 69% of America's major data processors, according to the latest IDC survey. Then, too, the name SyncSort has become synonymous with leadership in sorting technology. These are powerful recognition factors. We couldn't see any reason to go on calling our products by one name and our company by another. It's as simple as that. Yes, the lady on my left.

**REPORTER:** I seem to recall that you received a patent on SyncSort. Am I correct in that?

**PRESIDENT:** Yes, last July we received a U.S. Patent on many of the "novel sorting innovations" we've made over the years. These are now embodied in SyncSort, and they make it possible for the user to do his sorting work for the fewest possible computer resources. Incidentally, these innovations underlie all modern, efficient sorting. Without them, you'd be back in the stone age. Yes, sir.

**REPORTER:** Is performance the only reason for SyncSort's popularity?

**PRESIDENT:** Not by any means. Two other reasons are becoming increasingly important. One is that buzzword productivity. As the industry has become more "programmer-bound," we've built in a host of labor-saving features that reduce programmer time for common non-sorting functions. The second reason for SyncSort's success is simply customer service. No matter how well you design a sort program, the wide range of user requirements makes it imperative that you provide fast, accurate sorting advice. I'm particularly proud that 85% of all customer requests for technical service are now resolved within 24 hours. Yes, ma'am.

**REPORTER:** Then if I understand you, this name change doesn't signal any great change in your method of operation. It's simply a way of reminding the public of what made you famous.

**PRESIDENT:** Exactly. We're like a man named George Herman Ruth who decides to change his name legally to Babe.

**REPORTER:** Well, at the risk of sounding churlish, I'll remind you that Babe Ruth wasn't a software company. He was a homerun hitter.

**PRESIDENT:** So is SyncSort. Thank you ladies and gentlemen. Now if you'd care to join us for refreshments...

Syncsort Incorporated 560 Sylvan Ave., Englewood Cliffs, N.J. 07632

# At Pre-NCC Meeting Angry Synergist Dealers Slap DG Practices

By Marcia Blumenthal  
CW Staff

CHICAGO — A group of angry Data General Corp. dealers met here the weekend before the opening of the National Computer Conference to develop a strategy to cope with what they consider devious business practices by the mini maker.

More than 15 present or former deal-

ers of the Synergist system and a small cadre of lawyers joined in the all-day round-table discussion.

The meeting was called in part because of DG's February decision to phase out the Synergist program. That decision could leave users at risk; Synergist dealers claim DG's promised support for the estimated 1,000 installed systems will be spotty.

## DG Exec Explains Why Vendor Dropped Synergist

By Marcia Blumenthal  
CW Staff

CHICAGO — Data General Corp. recently decided to drop its Synergist program because it was not as successful as the company's other small business system offerings, according to a company vice-president.

Despite the decision to end that program, DG will continue to provide support for the 1,000 systems it estimated are installed at user sites, claimed Lawrence Seligman, vice-president and general manager of DG's Small Business Systems Division.

DG became involved with the Synergist dealer network in 1977 when it acquired Digital Computer Control, Inc. (DCC) after that company admitted to using DG trade secrets to produce a Nova-compatible processor.

When acquired, DCC had about 40 dealers and DG said it would continue to invest in that system to develop additional operating and application software and to provide maintenance to the installed base. The Synergist system was DG's entry into the turn-key systems market.

Although the number of Synergist dealers eventually climbed to about 90, some of those dealers are now miffed at DG's decision to drop the program.

While fostering the Synergist program, DG was also investing heavily in its R-DOS/Business Basic and Icos/Cobol systems. All of these systems were about equal at the time, but R-DOS and Icos have been far more

profitable for the company, Seligman responded during an interview at NCC.

When asked whether the DCC/Synergist flap would further tarnish the company's image, coming on heels of continued poor financial performance and massive company reorganization, Seligman said a Fortune 500 company has to take the knocks of negative publicity.

Rather than continue investing in a losing program, DG in February offered Synergist dealers the option of selling Rdos and Icos-based systems. Those dealers who want to convert will be provided with some system engineering assistance and be given a break on the licensing fees for those operating systems, Seligman said.

However, some dealers are miffed because their applications, both those provided with the Synergist system and those developed by dealers, will run only on the EOS operating system.

Although conceding that dealers will have to undergo considerable expense converting their applications, Seligman claimed that in the long run the effort will pay off as there is much more application software available for R-DOS and Icos systems than EOS systems.

Although Seligman was not informed about the specifics of the meeting or who was in attendance, he speculated that those disgruntled dealers may have been some of the less successful Synergist distributors.

Spearheading the group is Robert Hahn, president of Hahn Enterprises of Grafton, Wis., who at one time was a leading member of the Synergist dealers organization. Hahn has filed eight suits against DG employees or former DG employees, alleging a variety of harassment tactics, including sabotage and slander.

DG, in turn, has filed a suit against Hahn for nonpayment of about \$200,000 worth of equipment, according to Lawrence Seligman, vice-president and general manager of DG's Small Business Systems Division.

### Ad in WSJ

Hahn placed an advertisement, which some observers called inflammatory, in the May 4 issue of the *Wall Street Journal*, in which he urged those DG users and OEMs who have gripes against DG to submit their complaints to a specified post office box.

These complaints will be reviewed by Hahn and a group of lawyers who will try to classify them in order to determine whether to institute lawsuits against DG.

However, three noted computer lawyers who volunteered to come to the meeting said the dealers should be aware of what it takes to sue a company like DG.

Hahn claimed that about 60 DG end users and OEMs asked if they could attend the meeting, but he decided to limit attendance to Synergist dealers for the initial get-together.

The Synergist program began in earnest in 1977 when DG acquired Digital Computer Controls, Inc. (DCC), a company which reportedly admitted to using DG trade secrets to develop a DG Nova-compatible processor.

What was unique about DCC was that it had developed application software to run under its EOS operating system.

Rather than abandon the Synergist program, which at the time DCC was acquired had about 40 dealers, DG recognized DCC as a subsidiary and pledged to foster the Synergist program with both hardware and software support, recalled Hank Wilcox, president of Systems Support Group, a Winston-Salem, N.C.-based dealer.

Wilcox was one of the first dealers to sign on with DCC before it was acquired by DG and participated in developing, with some other dealers, application software — APPL-W and APPL-M geared for the wholesale and manufacturing industries.

"DG met with dealers individually and collectively and said it would support the applications programs and support the hardware," Wilcox said.

Although estimates of the number of DCC systems installed have been pegged at 300 to 3,000, DG's Seligman placed the number at 1,000.

Despite these promises for service, many dealers at the meeting maintained support was slow in coming. Moreover, they claimed the APPL software didn't work as advertised by DG. Many dealers spent upwards of \$100,000 to modify the software.

In response to these allegations, Seligman questioned whether these dealers had maintenance contracts with DG or whether they were on a time and materials basis. Back in 1978

the company's support services were weak, he conceded, adding that service preference was given to users with maintenance contracts.

Wilcox charged that APPL worked for demonstration purposes, but when the data was loaded, the program had file problems and lost indices. He claimed DG's APPL product offering was far more extensive than the product that eventually was delivered.

Dealers complained that after they discovered the software was expensive to redesign, they refused to sell the number of systems they had agreed to sell and that DG was "hard-nosed" about keeping dealers to those contracts. As a result, DG "charged back" the amount for the OEM quantity discounts they had given dealers under contract.

"Let them sue me," countered Terry Patton, president of Cleveland Business Systems, who signed up to sell six systems, priced between \$40,000 and \$60,000 in his first year as a Synergist dealer.

One of Patton's users wanted an upgrade and DG refused to deliver the equipment unless Patton signed an agreement to sell another six systems. He signed in order to service his user, but has no intention of selling more Synergist systems.

However, as far as the dealers are concerned, the coup de grace came in February when DG announced the end of the DCC Synergist program. At that time the firm offered dealers the option of becoming dealers for DG's R-DOS/Business Basic or for Icos/Cobol. But, applications written for EOS will not run on these systems and the conversion cost will no doubt cost millions.

Seligman maintained DG would continue to provide support for those DCC systems, but the program was being phased out because it was not profitable.

## What It Takes To Sue DG

CHICAGO — "Suing Data General Corp. is not for the faint hearted," warned Rocky Unruh, one of several attorneys at a pre-National Computer Conference DG Synergist dealers' meeting held here recently.

Unruh should know. An attorney with the law firm of Bingaman and Davenport in Sante Fe, N.M., he formerly represented SCI Systems, one of the original plaintiffs in the DG anti-trust trial now in its second month. SCI recently settled out of court with the mini maker.

Unruh said that preparation for that trial took the litigants two years and required 500 depositions. They have spent between \$4 million and \$10 million in the past 2½ years, he estimated.

About four of the dealers at the meeting said they were involved in or considering litigation with DG or its employees. Unruh cautioned those dealers, saying that "DG is not the kind of company that will willingly settle a case. It will fight all the way."

# Capacity Planners Decry Methods

By Tom Henkel  
CW Staff

CHICAGO — The keys to capacity planning are there. But they are hard to find, hard to validate and different for almost every user.

Speaking at one of the sessions offered at this year's National Computer Conference last week, three capacity planners from IBM and one from Michigan Bell told attendees there are no simple solutions to capacity planning.

Methods for evaluating how much of a processor is being used and for making projections on how much expansion will be needed are still in their infancy. And, the capacity planning experts pointed out, CPU utilization is only half the problem — I/O utilization is an equally important issue.

Methods for evaluating that function are even less advanced than those for CPU utilization, they noted.

Michigan Bell's Philip F. Curtiss said IBM's Usage philosophy on capacity planning is the best he has found. But after using the IBM method — which consists of a series of programs and basically helpful hints — for the past three years, Curtiss said he found the method erratic at best.

Michigan Bell has used four different versions of Usage, each an evolutionary extension of the previous version. The first two plans resulted in moderate success, with Curtiss' shining moment coming in a two-month period in 1978, when he predicted processor utilization within 2% of the actual figures.

But the more recent third and fourth achieved less impressive success, with the latest plan being a virtual disaster, he reported.

Problems with the method revolved around several issues, according to Curtiss. IBM's facility managers, such as Resource Management Facility (RMF) and System Management Facility (SMF), do not offer enough information on what is actually going on inside a processor to produce accurate predictions on future CPU utilization.

Furthermore, capture ratios that are used to adapt data from IBM resource managers for capacity planning change with every new software release. Hence, even with new capture ratios, which Curtiss said are difficult to get from IBM, the change in the basic utilization numbers often invalidates previous RMF and SMF data.

## IMS Users

Curtiss urged IBM to develop a method of evaluating how many users are working with the IMS data base management system.

Many IMS users accessing the data base from different segments of a system can often distort CPU usage projections, Curtiss said.

The Michigan Bell capacity planner said asking users the right questions is often more important than the statistical analysis of raw data.

Curtiss cited as an example the fourth version of Usage, which predicted Michigan Bell's processor usage would increase by only 5% during 1981. The actual processor usage far exceeded that projection by the first week of April.

But just keeping track of CPU utilization is only a small part of effective capacity planning. As Curtiss pointed out, if a systems center suffers from all

its I/O channels being busy, acquiring another processor may not be an economical way to solve the problem.

## CW at NCC

Joseph Major, representing IBM's Field Support Center in Montreal, said the capacity planning function involves four major areas: throughput, (the traditional analysis of CPU utilization and response time) relative I/O content (the I/O performance as it relates to the relative CPU throughput), channel path time (or the wait time for a request to go from the processor to direct-access storage devices (Dasd) and back to the CPU) and Dasd time

(the actual time it takes a tape or disk drive to process a request).

If the user can effectively determine any two of the performance criteria, the other two can be derived mathematically, Major said.

The advantage of Major's thesis is it can be determined independently of hardware and software, an obstacle he said has long been a stumbling block to capacity planning.

While Major offered some mathematical formulas to determine utilization in each of the defined utilization categories, he cautioned that each site is different and the results of RMF or SMF data, for example, are neither good or bad, they just reflect what is going on in a given system.

CW Photo by A. Dooley

IBM attracts its expected visitors.

## Up Front

CA-SORT's advantages make all other sorts mere utilities.

Tired of "Fairy Tales" and distorted claims of leadership?

Just benchmark CA-SORT against any other Sort Utility. You will find that CA-SORT performs better... **plus**, only CA-SORT offers:

- Multiple Sorted Output: Up to nine different sorts from one pass of the input file.
- CA-DART: An Exit 35 Report Writer that eliminates unnecessary I/O.
- CA-SRAM: The advanced programmer's high-performance sort facility.

These and other exclusive features of CA-SORT have led to its use in more than 6,000 DOS and OS installations world-wide.

For more details, reply today!

# Environment Less Structured Don't Work in Vacuum, Office Planners Told

By Jake Kirchner

CW Washington Bureau

CHICAGO — The purpose of office automation is to allow workers to be more productive, not to force them into a more formal work environment, attendees at the National Computer Conference were reminded here last week.

Designers of integrated word and data processing systems should be trying to solve business problems and not posing "technical solutions in a vacuum," Robert J. Elliott of Arthur Andersen & Co. told an overflow crowd at the early NCC session.

"We as systems designers and implementers have to face the fact," he said, that "the knowledge worker works in a less structured environment" than do members of the data processing department.

"Maybe we just need to supply the tools" and let them decide how to apply them in their environment," suggested Elliott, director of Arthur Andersen's office automation consulting practice.

James Tunis, director of research at Lincoln National Life Insurance Co., agreed with Elliott, saying systems de-

## CW at NCC

signers should not dictate to each employee the functions of an integrated system to which he can have access.

"Let's let the users choose what they want to use," Tunis said. Lincoln's approach to office automation, he said, is to put into a single workstation all the capabilities of the system and let the individual worker use them as he sees fit.

In fact, he continued, this is the only approach that is practicable in a large organization. When designing Lincoln's system, the company found various organizational units were changing so rapidly that it would have been impossible to tailor separate parts of the overall system to individual end users' needs, he said.

Of the approximately 3,500 employ-

ees at the home office in Fort Wayne, Ind., some 350 Lincoln employees now have their own terminals and about 200 others are occasional users, Tunis said.

All users have access to the complete range of word processing and data processing functions of the system, he said, adding the system will probably grow to include as many as 2,000 terminals to serve all the secretaries and "knowledge workers."

After assessing the workers' needs, the company concluded "that maybe what we should do is just simply put together a tool kit . . . and give everyone a little training in all the areas," Tunis said.

The system design concept was to "give people as much functionality as we can in one box," Tunis said.

The results so far have proven the

desirability of that concept, he said, noting that the company's chief financial officer, who uses the system about three-and-one-half hours a day, often uses the word processing functions of the system. The firm's secretaries, he added, "use a little of everything," including the system's graphics capabilities.

By giving all users the full range of functions and letting them use them as they want, the company helped lessen what Elliott's colleague Evelyn Wilk called "the sense of loss" that workers feel when their jobs are automated.

All office automation "interrupts the very subtle and unconsciously worked-out environment" of the office worker. When we automate, she said, "we are in effect changing the rules of the game by which [workers] have learned to survive."

## Office Gear Seen Lagging In Quest for Productivity

By Bob Johnson

CW Staff

CHICAGO — "American industry is falling behind in office productivity," according to James H. Carlisle of Office of the Future, Inc.

The U.S. has become a post-industrial economy that needs new technologies. Chief among them, Carlisle said here last week at the National Computer Conference, are communications technologies, which hold the key to the successful implementation of the automated office in coming years.

Managers — not clerks and administrative personnel — are most in need of help, Carlisle said. Managers who cannot adapt to imminent technological changes — including the adoption of broadband networks, integrated graphics, digital and voice networks and dedicated multitasking microprocessors — may be lost in the office of the future.

"While managers don't rely on computer models to make decisions, they do want to use technologies they are familiar with," Carlisle said.

Word processing companies are moving into communications that rely on central data bases and communications controllers, and this fact further underscores the importance of com-

munications in the automated office, Carlisle said.

Such well-known communications companies as GTE, AT&T and Xerox Corp. are all gearing up for the new office. GTE, with its acquisition of Telnet and its offspring, Telemat, seems especially well-positioned to assist the manager of the office, Carlisle said.

In the same vein, Carlisle predicted that voice networks that can store and forward messages will come into their own, but that slow growth will characterize the digital voice field.

AT&T's Advanced Communications Service (ACS) has a very questionable future, according to Carlisle, because it has been plagued with problems so far. However, the company's Unix operating system will "shine."

Terminal languages "are not well developed for office automation," Carlisle said, mentioning that Xerox has made a "revolutionary" breakthrough with its introduction of the Star professional workstation.

"Xerox will push the industry into its style of terminal design," Carlisle said. He claimed that the human factors and ease of use of the Star system are just what is needed in the office of the future.

## Reagan Plan Scaled Down

(Continued from Page 1)

tem [CW, April 20]. The latter called for a computerized super-file of over 25 million welfare recipients, a file that could be accessed on request by an unspecified number of state and local agencies.

The original plan also called for the accessing of employment and income data held by the Internal Revenue Service, which the revised plan does not.

For its part, the Health and Human Services Department has categorically denied ever having proposed the computerized super-file. A department spokesman said that the draft proposals of the National Recipient Information System that freely floated around the halls of the U.S. house and senate buildings last month did not emanate

from the department office.

But according to the *New York Times* and other published reports, the draft proposal had been sent to Speaker of the House Thomas P. O'Neill Jr. as part of the department's overall welfare revision program. The draft was accompanied by a cover letter signed by department Secretary Richard S. Schweiker.

Reports of the draft proposal triggered a strong blast from the American Civil Liberties Union (ACLU). John Shattuck, national director of the ACLU here, told *Computerworld* that the proposed super-file was a clear violation of federally ensured rights of privacy and that the ACLU would likely contest the proposal in court should it gain congressional approval.

# Info on Ethernet Levels Ready This Summer: Xerox

By Phil Hirsch

CW Washington Bureau

CHICAGO — Xerox Corp. is planning to announce specifications for one or more higher levels of its Ethernet protocol this summer, a company official reported here last week at a National Computer Conference session.

Senior Staff Engineer Robert S. Printis, one of the managers of Xerox's local-area network development effort, also reported that voice messages have been transmitted experimentally on the developmental Ethernet system at Xerox's Palo Alto, Calif., research facility. "Nothing in the technology precludes the transmission of voice," he said, but declined to say whether Xerox plans to support this capability commercially.

Printis was one of four speakers — the others came from Intel Corp., Digital Equipment Corp. and Mitre Corp. — who discussed the present status and future prospects for Ethernet-type local-area networks. The first two companies, along with Xerox, are the main promoters of Ethernet at the moment. They have jointly published a specification — known informally as "the Blue Book" — which they are trying to establish as a de facto industry standard.

## Book Specifications

Appearing with Printis at the NCC session were David Potter of DEC and Phil Arst of Intel; Gregory T. Hopkins of Mitre Corp. served as session chairman. Some key points covered were:

- Xerox has installed 10M bit/sec Ethernet at "a number of sites," but the users have requested anonymity. This statement by Printis apparently was meant to counter an often-voiced criticism of Ethernet — that as implemented so far, it will support data rates only up to 3M bits/sec, and therefore lacks sufficient capacity for high data rate applications like video teleconferencing and computer to computer file transfer.
- Carrier-Sense Multiple Access/Collision Detection, the contention allocation method chosen by Xerox, Intel, and DEC for the Blue Book specification, was picked because it is a simpler, more thoroughly developed, and better tested scheme than its chief competitor, token passing. Baseband transmission was chosen instead of broadband for basically the same reasons.

- Differences exist between the Blue Book specification and the 802 local-area network standard being developed by the Institute of Electronic and Electrical Engineers (IEEE). The two efforts are working toward convergence, but total agreement will not occur until after this summer, when the 802 committee is scheduled to publish the final version of its initial local-area network standard.

- Interconnection of Ethernet with networks utilizing other protocols — such as X.25 — are technically possible, but all three speakers declined to comment on whether or when these enhancements would become available.

- The Blue Book specification implements the lowest two levels of communication needed to support information interchange between and among

users tied to an Ethernet system. A total of seven levels will ultimately have to be standardized.

## CW at NCC

The two levels in the Blue Book correspond to the physical and data link levels of the International Standards Organization (ISO) open systems interconnection model. Xerox has published specifications for a third, network layer which supports interconnection between physically separate Ethernet systems. This level is one part of ISO's Level 3.

An NCC Systems Crash?

## THE COMMANDER I SERIES

### FAMILY PLANNING FOR OPERATIONS MANAGEMENT

Capex believes in family planning for software. Especially in operations management where eliminating time consuming, error prone, repetitive tasks is the key to productivity.

The COMMANDER 1 SERIES provides strong solutions to operations management problems. It's a mature family of straightforward, understandable products for scheduling, documentation, disaster planning and tape management. The benefits include better control, improved resource utilization, automation of complex operations and a major gain in both system and personnel productivity.

Three family members are ready — now — to meet your needs. They're the ideal choice if you're challenged by growing user demands, upcoming conversions or rapid new program development.

- TLMS II provides operations management with control over tape data set libraries including storage, protection and movement.

- THE SCHEDULER offers production control management, workload resource simulation, on-line tracking and on-line documentation.
- JOBDQC permits on-line job documentation, job synopsis and reliable disaster planning support.

Together, the COMMANDER 1 SERIES products provide a unique, integrated approach to operations management and production control needs for today ... and tomorrow.

Call Capex at (602) 264-7241 today or write for complete information on COMMANDER 1 SERIES and its family members.

# Triples VAX Benchmark Rate SEL Brings Out 'Most Powerful' 32-Bit Mini

By Susan Coleman  
Special to CW

CHICAGO — A 32-bit minicomputer that reportedly benchmarks at three times the rate of the Digital Equipment Corp. VAX-11/780 was claimed by its designer to be the most powerful minicomputer in the world when it was announced here at the National Computer conference last week.

Systems Engineering Laboratories, Inc. (SEL), a subsidiary of Gould, Inc. will deliver the first Concept 32/87 next month.

Bill Ward, director of advanced development at SEL and the leader of the two-and-one-half-year project that produced the 32/87, said the machine had merged mainframe concepts of emitter-coupled logic (ECL) and large machine architecture with minicomputer economy.

The result is the top-of-the-range 32/87, which for around \$250,000, configured, delivers 3.6 millions of in-

structions per second (Mips).

Ward, who was instrumental in the design of NCR Corp.'s Criterion mainframe, said the 32/87 was developed after pressure from SEL customers, in such areas as seismic processing and power control. These customers demanded a machine that combined the capabilities of scientific number crunchers like the Control Data Corp. Cyber series with minicomputer prices, he said.

The system is software-compatible with the other machines in the SEL range. When benchmarked in Fortran, the 32/87 achieved 3,600 Whetstones per second (Whetstones are used to rate scientific processing) compared with the VAX-11/780 at 1,200 Whetstones per second.

Against a CDC 6600, the 32/87 showed equal performance — slightly under the performance of a Cyber 175, Ward said.

The machine, like others in the SEL

range of 32-bit minicomputers, features the Selbus, "a very high-performance multiplexed bus." This enables it to pass data at sufficiently high rates to satisfy the huge number-crunching capacity of the central processor and its assistant array processor, he continued.

## Four-Stage Pipeline

A four-stage pipeline enables four instructions to be executed at once, and the bit rate to cache memory is 90%, Ward said.

The 32/87 was microprogrammed via writable control store which, being loaded from floppy disk, enables updates to the system to be made. Earlier systems required firmware to be replaced.

The company is expected to announce very high-performance CAM computer-aided design and computer-aided manufacturing software for the 32/87 in August. SEL has five 32/87s on order

and expects to initially manufacture 40 each year, Ward said.

Prices start at \$235,000 for a basic 32/87 system with 1M-byte of memory, 16K-byte cache, integral single- and double-precision floating point processor, diagnostic processor, input/output processor, two floppy disk drives, CRT control console, dual-width cabinet, power supplies, firmware and diagnostics and complete documentation, the firm said. A similar configuration with 32K bytes of cache memory is priced at \$265,000.

SEL's new processor uses a software-transparent hierarchical memory system provided by Integrated Memory Modules, pioneered on the Concept 32/27, and an associative cache memory of either 16K-byte- or 32K-byte-capacity.

"This design is consistent with System's philosophy of modular performance enhancements," Ward said. The cache memory system was designed to provide the performance and throughput required for SEL's traditional and new markets.

"The Concept 32/87 runs System's MPX-32 operating system and offers full upward compatibility to the System's minicomputer user who wants to increase his computer performance and systems throughput without sacrificing his application software investment," Ward continued.

SEL reportedly offers diagnostic and maintenance support spearheaded by a diagnostic processor — allowing system diagnosis and troubleshooting. The microdiagnostics are loaded through a dedicated floppy disk, which is included in the basic system. Diagnostic messages are displayed on the CRT console, which is also used to display the normal control panel functions, the firm said.

The cabinet is 55.5 in. high, and has an improved cooling system. Since air is taken in and exhausted through the front and rear of the cabinet, it reportedly can be installed side-by-side with compatible peripheral cabinets.

# BAS Unwraps Operating System

By Lois Paul  
CW Staff

CHICAGO — Business Application Systems, Inc. (BAS) unveiled at the National Computer Conference here last week its machine-independent operating system that it designed to "free software users from the tyranny of hardware vendors," Earl Gilmore, president of BAS, said.

Basport, as the product is called, provides language capability, file structure and programming tools to build and support an interactive commercial application, Gilmore explained. He added that it provides "big-machine" features such as 32-bit address space and multiprogramming.

Major components of Basport include Basport Business Pascal, standard Pascal with extensions that reportedly facilitate commercial applications; a Basic Command Processor that is the primary user interface to the system; a debugger that can be used with Business Pascal and Cobol; a text editor; and a file system.

Utilities include a text formatter;

Forms, a dictionary-driven information management system; and report and query capabilities.

Gilmore explained that programs compiled on a Basport system are portable at the object-code level. They can be transported from one Basport machine to another without being recompiled.

"It can run on anything," Gilmore said. "Users can select the machine based on what they want to do. The only difference from processor to processor is the time it takes to complete an application."

The Basport system has been in the development process for a number of years. "We have been working on machine-independent software since 1977," Gilmore said.

Basport is a full software environment for a minicomputer or microcomputer. "It can be viewed as all the software you need to be a legitimate commercial organization," Gilmore said.

The Basport system was designed with the end user in mind, Gilmore

stressed. "He can learn the system once. This is for the person who is tired of hardware manufacturers continually changing the world under him."

Users can gradually and linearly add applications to the system, Gilmore said, noting that BAS will be converting its application software to the machine-independent Basport software base.

"We will be selling vertical market packages to end users and distributors," he added.

Gilmore sees Basport as potentially filling the gap that exists between the introduction of new hardware and the availability of good compatible software.

"The public is starving for software for low cost processors," Gilmore said. Basport is available to end users for prices ranging from \$3,000 to \$10,000. BAS is located at 7334 Chapel Hill Road, Raleigh, N.C. 27607.

# Graphics Offerings Show True Colors at NCC

By Jeffrey Beeler

CW West Coast Bureau

CHICAGO — This year's National Computer Conference may go down in history as one of the most colorful shows in recent memory. But NCC '81 held here last week showed its true colors, not in its exhibitors' eye-catching product displays or slightly outrageous sales pitches, but in the variety of hues and shades emanating from the show floor's terminals and printers.

Perhaps no other conference in NCC's nine-year history has boasted such a wide assortment of color graphics exhibitors and exhibits.

NCC '81 attracted color graphics companies of nearly every stripe, from IBM with its Model 3279 terminal — introduced at last year's show in Anaheim, Calif. — to Atari, Inc., which displayed an education system featuring multicolored CRT output.

Even suppliers of color graphics software got into the act, with firms like Integrated Software Systems Corp. (Issco) busily putting their products through their paces.

## Color Spectrum

Rounding out the spectrum of color graphics exhibitors were vendors like California Computer Products, Inc. with its Graphics 7 system; Chromatics, Inc., which displayed its CGC 7900 and CG series stand-alone processors; Intelligent Systems Corp. with its line of color CRT terminals; and Megatek Corp., which showed its Whizzard family of faster display units.

The line-up of color graphics suppliers might have been even more impressive if some of the industry's leading display system manufacturers like Ramtek Corp. had not elected to forego this year's NCC.

Many of the exhibitors on hand for the conference's 1981 installment agreed that the large turnout of color graphics firms reflected growing user interest in — and demand for — multicolored business output in pictorial form.

Only a short while ago, color graphics capabilities were geared primarily to fairly simple applications like imaging and the production of bar charts, pie charts and other routine business drawings. In short, the color graphics

field was limited mainly to passive reporting.

But with recent advances in raster-scan techniques, the color graphics field is beginning to expand into increasingly sophisticated applications in both the business and technical realms, according to Megatek vice-president Peter Shaw.

Although color graphics is still used heavily for converting management information from tabular to pictorial form, the display technology is increasingly being harnessed to do interactive line drawings, which demand a higher level of product sophistication than simple reporting applications.

In the business sphere, interactive line drawings are allowing users to answer "what if" questions and to

tackle complex financial modeling, simulation and planning applications that until recently lay beyond the capa-

## CW at NCC

bilities of color graphics technology. The rise of interactive color graphics is also having a similar impact on the world of computer-aided manufacturing and design, Shaw said.

Among users of noninteractive graphics systems, demand is steadily growing for improved display resolution and aesthetics, according to Issco's vice-president of development Anders Vinberg. That demand is particularly pronounced among nontechnical business executives, who have long been accustomed to visually pleasing charts and graphs and are reluctant to accept anything else.

In the early days, color graphics companies were so preoccupied with mastering the technological "basics" of their field that they had little time to worry about whether their screen displays or hard-copy output looked professional and presentable.

But now that the technological groundwork of the color graphics business has finally been laid, vendors can now afford to turn their attention to the artistic niceties that contribute little to information content but that enhance computer output's visual appeal and user acceptance, Vinberg said.

## BDS LINE PRINTER SYSTEMS

# 30-50% SAVINGS

BDS, your independent printer supplier, has the most cost effective answers to your exact line printer requirements.

With savings from 30-50%.

With printer speed ranges from 100-1800 LPM.

Diversification as needed, Matrix, Graphics, Band, Drum.

And quick delivery—30 days in most cases.

Now BDS adds even more.

### TURNKEY SERVICE.

Line printer, interface, and controller, delivered at your door. Plus installation. (Over 2000 installed.)

One call to BDS at 800/227-7342 is all it takes. Service available in over 100 U.S. cities.

# No Big Product Splashes at This Year's Show

(Continued from Page 1)

chitecture (SNA) and the X.25 communications protocol SNA does not support domestically.

The DG software products that comprise this Xodiac revision make DG's flagship 32-bit system, the MV/8000, a direct competitor with IBM's 8100 and certain 4300 systems in decentralized, IBM-hosted data networks. Moreover, this software makes DG Eclipse mini-computer systems plug-compatible with IBM 3274 and 3276 cluster controllers, and certain DG printers and terminals plug-compatible with IBM counterparts.

Another major announcement made to coincide with NCC coverage was Xerox Corp.'s unveiling of the Star workstation for integrated data/word communications in the Ethernet local network Xerox developed jointly with DEC and Intel Corp. The basic Star features a 192K-byte 16-bit main memory and 10M bytes of disk storage.

Zilog, Inc. chose NCC to announce its Distributed Commercial Systems (DCS) series to go with its Z-Net local network architecture. This would seem to quash rumors, vigorously denied by Zilog earlier this year, that the Exxon Corp. subsidiary means to pull out of the small systems arena. DCS are based on Zilog's MCZ-2 microcomputers and support multiuser Cobol applications.

Intel recently revealed plans to market controllers and other devices for Ethernet environments and, at NCC, introduced its IMMX 800 Multibus message exchange, a software package

intended to simplify multiprocessing and message flow under the protocols of Ethernet and IBM.

## Software Products

Everyone had plenty of new software to consider at the conference. Cincom Systems, Inc. announced that various data base products, such as the Cincinnati firm's data dictionary, can now run as an integrated IBM-compatible system.

Harris Corp. rigged its 1600 series remote batch terminals for SNA duty with the vendor's new 377X/SNA emulator. And Harris also picked NCC to give 1600s interactive Ansi 1974 Cobol.

Microdata Corp. unveiled the Results Job Accounting Application System and Ad Pak, a software package for advertising agencies. And Zenith Data Systems announced four software packages oriented toward office applications.

On the communications front, Paradyne Corp. announced a 16K bit/sec voiceband modem. Although this would outperform the two fastest commercial voiceband modems — Paradyne's MP 14.4 and Codex Corp.'s SP 14.4 — the new speed demon is "essentially a military box" and will see initial service as a digitized voice, not data, device.

Paradyne also added a network control system, the Network Administrator, to its Analysis product family, and the TC 9600 modem, which the Paradyne spokesman claimed is now the least expensive point-to-point 9,600 bit/sec modem. It costs \$2,740, includ-

ing a year's parts and labor warranty.

Televideo Systems, Inc., a company noted for its CRT terminals, unwrapped a family of small business systems that range from a single-user computer to a 16-user distributed network. The Systems I, II, III feature 64K bytes of random-access memory and up to 70.5M bytes of hard disk storage. The systems use a multiuser operating system developed by the firm, and a variety of languages including Basic-80 and PL/I-80.

The Televideo systems range in price from \$3,995 to \$19,995, with additional user stations for the high-end system priced at \$1,795.

Not one to be left out of the crowd, Altos Computer Systems unveiled a multiuser computer system that combines 10M bytes of hard disk storage with floppy disk or magnetic tape backup media.

The ACS8000-10 is reportedly the first multiuser, 8-in. 10M-byte hard disk microcomputer system to enter the crowded small business market. The Z80-based system integrates the company's single-board computer and DMA controller with a Winchester drive. It has 208K bytes of internal random-access memory, six programmable ports and can handle data rates up to 800 bit/sec, a spokesman said.

The system costs about \$8,500 with a single-sided floppy disk or \$9,500 with a double-sided floppy disk. The computer is also available with a magnetic tape cassette, which boosts the cost to \$10,990, Altos said.

## Peripherals Unveiled

On the peripherals side:

- Braegen Corp. unveiled a 15-in. version of the Digital Equipment Corp. VT-100 terminal called the BT-100. The terminal features advanced video and a printer port as standard features and costs \$1,995.

- Ampex Corp. introduced a line of CRT terminals that have a touch input capability. The units use a scanning infrared beam technology and allow the user to interact with the host computer. The Dialogue Touchterm 80 has an RS-232C asynchronous interface, operates at transmission rates up to 19.2K bit/sec and costs \$2,498.

Other peripherals that made their grand debut at the show are: a number of printers by General Electric Co., including a Termet 200 split-platen line model that operates at 9,600 bit/sec and prints at 200 char./sec and a 1,200 bit/sec Termet tabletop matrix printer that features dual microprocessors and prints bidirectionally at 120 char./sec.

# Teachers Tell How to Push Use of Micros in Schools

By Susan Blakeney

CW Staff

CHICAGO — There seem to be two kinds of teachers: those who support computer-aided instruction (CAI) and those who do not. And the first group is battling to convert the second.

That was the thrust of a session called "Teachers' Experience with Microcomputers" held at the National Computer Conference's Personal Computing Festival here last week. The eight-member panel from various Illinois school districts represented that first group of teachers.

Jerry Wicks, coordinator of a CAI program in Northbrook, Ill., recommended what he called the "back-door" approach. Computers should not be imposed on teachers from administrators on high, but instead should be brought into the lower levels and introduced to the classroom teachers first, he said.

Also, rather than forcing programming down the teachers' throats, Wicks encouraged a computer literacy program instead.

## Demands on Students

Sandra Bode from the DuPage Career Center advocated the use of computers in the classroom because of society's increasing demand on the student to know information processing. Now, she claimed, computers are very much like "the video machines that sat in the corner of the room because teachers were afraid to use them," but that is changing fast.

In many classrooms, Tandy Corp.'s TRS-80 and Apple Computer, Inc.'s Apple micros are an integral part of the curriculum in kindergarten through 12th grade, despite the sizable obstacles of cost and attitude.

Disappointed by the considerable downtime of the large mainframes, several administrators have turned to micros as a kind of dual solution for office use and classroom applications, session participants said.

Thus, computers are finding their way into the music room, the typing class, the English courses and, of course, the math department. Not surprisingly, most students are more responsive to them than many instructors.

## Attack Plan

Jim Dollinger of Naperville, Ill., embraced this phenomenon as part of his "very definite attack" on his school district because once the teachers and administrators see the students' enthusiastic reaction, it seems to spread.

Dollinger suggested that in drumming up support for CAI, one should draw upon all the resources in and around the community. Ask for surplus equipment to lessen the costs, he told session attendees.

Other advice to teachers who are just beginning to wage their own CAI war included:

- Do not emphasize the use of computer games in the classroom — administrators will not like it.
- Stress the number of jobs now available in the DP field.

- Stay away from disk and use tape instead — it is sturdier with children.

Northbrook's Jerry Wicks has successfully built up his "Apple orchard" in spite of barriers and criticism. Judy Kralik of Woodridge, too, has overcome arguments that a declining literacy rate in this country must not supercede the need for CAI but, rather, that CAI should be employed to reverse this trend.

## NCCers Get Opportunity To Weigh Pros and Cons Of ACM, DPMA Curricula

CHICAGO — The American Federation of Information Processing Societies, Inc. (Afips) is many things to many people. But can two of its bodies — Association for Computing Machinery (ACM) and Data Processing Management Association (DPMA) — be the same thing to the same people?

This was the subject of the session, "A Survey and Comparison of Model Curricula for Information Systems Education" last week at the National Computer Conference.

Thomas H. Athey of California State Polytechnic University, Pomona,

spoke on behalf of the newly proposed Computer Information Systems (CIS)

### CW at NCC

curriculum proposed by DPMA.

DPMA is challenging the information systems curriculum developed by ACM that has been in existence for more than 12 years. Jay F. Nunamaker Jr., who teaches at the University of Arizona, explained the origin of the ACM curriculum and mentioned that it is being revised once again to keep pace with changing educational and corporate needs.

DPMA seems interested in a slightly different educational emphasis — application program development. This is in contrast with ACM's analyst/design emphasis.

Athey explained that the DPMA program is heavily committed to structural methods, but did not advocate a specific methodology. Nunamaker, on the other hand, said the ACM program rested on the conceptual foundations for building a corporate information system.

Both Athey and Nunamaker emphasized that their students gained an applied, real-world education which would allow them to become quickly productive in an organization.

DPMA's core undergraduate curriculum was composed of the following courses:

- Introduction to Computer-Based Systems.
- Applications Program Development
- I. Applications Program Development
- II. Systems Analysis Methods.
- Structured Systems Analysis and Design.
- Data Base Program Development.
- Applied Software Development Project.

The ACM Curriculum Committee for Information Systems, on the other hand, had identified a number of core courses in information systems analysis, data base, software design, system design and implementation, file systems, data management and data communication.

Neither DPMA nor ACM found a consensus on what language should be taught, although both agreed that one should be specified by the school. In one survey DPMA conducted, 93% of the respondents indicated a preference for Cobol.

Walter J. Hadcock, speaker from the A.O. Smith Corp., said he felt the DPMA curriculum produced a more "immediately useful graduate," while ACM's curriculum might be better for "mid-term and long-term goals."

Fifty-two schools now meet ACM requirements in their undergraduate curriculum. DPMA claims some 20 unidentified institutions will try out their curriculum.

Most schools take several years in committee to approve a change in curriculum. The needs and interests in data processing are changing, sometimes daily, further complicating the development of curriculum standards.

## Intel's IRM Seminars: the productivity investment you've been banking on.

Tap into a wealth of productivity solutions, compliments of Intel.

Intel's Information Resource Management (IRM) product family is the productivity investment you've been waiting to make. Our nationwide seminars will be focusing on the hands-on productivity solutions we've tailored for you in the eighties.

Intel uniquely applies Information Resource Management to give you product solutions within a complete context. The benefits of Integrated Data Dictionary and advantages of data base management are fully outlined, and we don't stop there. Intel's IRM seminars address the issues of application, end-user and organizational performance, laying out solutions and product benefits.

### THREE HOURS.

Consider three hours filled with the how-to's of optimizing your information-based productivity. We focus on gaining efficiencies in application development and end-user access, as well as maintenance and security considerations. SYSTEM 2000®/80 DBMS alone offers the plus value of added-component capabilities.

If you're looking for a productivity pay-off that nets you considerably more than you've put in—and one that yields significant return on investment—join us at any of the seminars listed on our schedule.

### RSVP

Take the time now to make the productivity investment you need to cinch the eighties. Call Intel's Market Information Office at 512/258-5171 with the details for your attendance. Or, simply return the invitation for reservations.

# And Increased Rewards Predicted Opportunity Sighted in Software Maintenance

By Tom Henkel  
CW Staff

CHICAGO — The programmer's graveyard is alive with opportunities. Software maintenance, long regarded as one of the true drudge jobs of programming, may find new life, according to John Reutter III representing Dynabyte, Inc. Reutter said that as costly as software is, maintenance is 40% more costly. He theorized the average data processing shop spends 30% of its development budget on programs and another 70% to keep them running.

With those figures in mind, Reutter told a standing-room-only crowd at the National Computer Conference here last week that the future of software maintenance is taking a giant step forward in overall shop importance.

And software maintenance no longer means just debugging. Reutter said coding and emergency repairs amount only to about 10% of a maintenance programmer's duties. Most of the maintenance programmer's time (about 45%) is spent making enhancements to existing systems. Another 25% is spent keeping up with changing conditions or the way the business is handled, and about 12% of the time is spent on upgrades or recoding to adapt to hardware upgrades. The final 10% is devoted to growth or expanding the existing system to accommodate a higher demand, Reutter said.

Speaking in favor of a structured

methodology of software maintenance, Reutter said the maintenance programmer should have four basic goals in mind.

He should be dedicated to correcting and improving the programs, smoothing out both hardware and software changes and improving the overall quality of the shop's software and be able to produce enough maintenance-type services to keep in step with the development activities.

But aside from the idyllic view of what a maintenance programmer should be, Reutter said there are some clear areas developing in maintenance that are becoming increasingly important. Job classifications like perform-

ance measurement, run-time error detecting, program strength analysis managing reference facilities are jobs

are started from scratch.

Speaking in defense of Reutter's thesis, Michael J. Lyons of the Catalyst Corp. said on a conservative scale, each line of code costs an estimated \$10 to write. Therefore, it makes much more sense to upgrade current software packages, as opposed to developing new programs from scratch.

To further sweeten his stance, Lyon said switching to a structured method of programming can increase programmer productivity by a three-to-one ratio. Therefore, he concluded, the combination of structured methods and a sound maintenance program could greatly improve software productivity.

## CW at NCC

that will increase in popularity. Ultimately the financial rewards associated with those jobs are projected to increase, Reutter said.

Attacking the thesis that maintenance programming is a dead-end job that does not allow the programmer to grow, Reutter said more programs are enhanced into bigger, and potentially better, programs than are projects that

## A. Price, Performance, Compatibility Q. Why buy line printers from Continental?

Continental Resources is a leading supplier of integrated printer subsystems. As a result, we make it easy for you to purchase only the type of printer you need. Nothing more. Nothing less. Then we integrate that printer with your CPU.

Our latest technology printers range from 200 to 1800 lines-per-minute in a choice of matrix, band, drum and chaintrain print mechanisms. All at considerable savings.

### Here's what CRI offers you:

- Familiarity with your requirements
- Complete end-to-end interfacing.
- System Integration Assistance—our specialists will provide throughput, integrate and install the printer at your site
- Off the shelf delivery
- Service capability through our own coast-to-coast offices
- Complete supplies and accessories support
- Complete spares and options inventory
- Complete financial plans, including flexible rental and lease plans
- Savings—CRI can save you up to 50% off the manufacturer's list price

## Japanese Focus On Software

By Tim Scannell  
CW Staff

CHICAGO — Armed with notebooks, cameras and an insatiable curiosity, the Japanese were out in full force last week at the National Computer Conference.

But this year they were focusing on software and U.S. software companies, rather than on the latest hardware and technological developments.

The majority of Japanese visitors were interested mainly in the exhibits showcased on the three football field-sized floors of McCormick Place, according to Kazuhiro Ishida, a tour director who organized a group of 38 Japanese businesspeople and brought them to the show. Smiling at references to the highly publicized "Japanese invasion" and claiming that Japan is probably equal to the U.S. in hardware capabilities, he said it is painfully behind in software and software development.

As an example, Ishida pointed out that his countrymen presently have no convenient or global method to keep track of any Japanese technological breakthroughs. Therefore, while productivity is high and the technology comes fast and furious in Japan, there is also a lot of duplication of manufacturing effort.

The Japanese are studying the U.S. patent procedures and tracking methods to overcome this problem, Ishida said. "Software sales are not so popular in Japan, so there is a possibility for a lot of new business to come into the country," he explained.

# Blumenthal Urges Industry Effort on TDF

By Marcia Blumenthal  
CW Staff

CHICAGO — Burroughs Corp. Chairman W. Michael Blumenthal urged the creation of a cooperative computer industry effort to monitor and disseminate information about proposed or

enacted transborder data flow legislation during his keynote address at the National Computer Conference here last week.

Blumenthal gave examples of how restrictive legislation, stemming from economic protectionism in various

countries, will impact his company. Burroughs recently felt the barb of protectionism in its remote support pro-

gram. However, when asked whether Burroughs would spearhead such an effort, Blumenthal said the TDF Forum should be the responsibility of professional and industry organizations such as the Computer and Business Equipment Manufacturers Association (Cbema).

Blumenthal also called for joint ventures with other countries as a means of allaying foreign countries' concern with U.S. dominance in the information processing industry. "Protectionist barriers will not fall until other countries feel they are not threatened by the American information gap. We must temper our frustration over these barriers with the awareness that, in other industries, it is the Americans who raise the barriers of protectionism."

It is not hard to see why foreign nations are concerned about U.S. dominance in the information processing industry when 56% of the large data bases for service networks are located in the U.S.; and these data bases account for more than 80% of worldwide transmissions, Blumenthal said, citing statistics from the Organization of Economic Cooperation and Development (OECD).

Burroughs is actively exploring a joint venture arrangement, but Blumenthal would not comment on the nature of any proposed venture or with what countries that type of arrangement is being discussed.

European Economic Community officials recently called for joint ventures and cooperative agreements among European DP firms to develop the equipment for a European advanced telecommunications network, he noted. "If this plan works, the Europeans will control not only the type of information transmitted but the media over which it is sent," he said.

Although transborder data flow restrictions are imposed by nations in the guise of enforcing privacy laws, European nations define privacy much more broadly than the U.S. government. European nations fold within the privacy net entities such as multinational corporations, which permits a country to regulate industrial, financial and commercial information as well as personal data.

Differences in the definitions of privacy create different privacy legislation among nations. The Europeans, outside the OECD, have adopted a binding treaty within the Council of Europe, Blumenthal said. This treaty allows a country with national privacy legislation to restrict data flow only to countries where no equivalent legislation exists.

## Xerox's Star Takes Starring Role at NCC

CHICAGO — On the third day of the National Computer Conference here last week the exhibit that looked like a sure-fire winner from the start — Xerox Corp.'s Star 8010 professional workstation — turned out to be just that.

Between 150 and 200 visitors per hour passed through the Xerox booth, estimated George Kingston, marketing manager with Xerox's Office Products Division.

Visitors ranged from curious spectators to interested potential users, according to Kingston.

## CW at NCC

The Canadian government refused to allow Burroughs to dial into the government computing system to service hardware, citing privacy as the reason for the denial.

### R&D Efforts

In other issues hitting close to the Detroit mainframe's turf, Blumenthal said the firm's widely scattered research and development effort could be hampered if foreign governments prohibit the transfer of information through communications networks. "This would force us to fall back on personal visits or mail unless we invent an international pony express."

Blumenthal is the second major industry executive to call for industry-wide cooperation in the past couple of months. Robert M. Price, president and chief operating officer of Control Data Corp., recently suggested a framework for joint microelectronics research [CW April 13].

W. Michael Blumenthal

## MTI adds New Jersey demo center!

### Celebration Sale:

**LA 120...\$2295 \$2225. Save \$70.**

**For New Jersey customers we'll throw in a free KA-kit! (Paper basket, shelf and casters worth \$85.)**

Help us celebrate the opening of our new demo center located at 383 Route 46 West, Fairfield, New Jersey, and help yourself to a terrific price on this high-performance, high-speed terminal.

The LA 120 features smart, bidirectional printing at 180 characters per second, and has a 1000-character buffer to keep up with 1200 baud transmissions. Communications rate is selectable up to 9600 baud, and there are more than 45 user-selectable communications, printing and formatting features.

Even when we're not celebrating with a sale, our lease and purchase prices are hard to beat. MTI is the one source for all of the terminals, peripherals, applications expertise and service you'll ever need for your communications network. Call MTI today.

# Reusable Code Prescribed For Software Productivity

By Lois Paul  
CW Staff

CHICAGO — If we define application software productivity as the amount of effort required to produce the software needed, then the larger the amount of reusable code, the higher the productivity, Daniel Teichroew of the University of Michigan said in a panel discussion at the National Computer Conference held here last week.

At the session "Definition and Measurement of Application Software Productivity," Teichroew cited the large number of tools available that can add up to increased productivity. These include data dictionaries, programmer workbenches, computer-aided design and workstations. The more effectively these tools are integrated, the more effective they will be in increasing application software productivity.

According to Teichroew, many organizations wait until "the 365th day of the year" to look at the problem of productivity. Benn Konsynski of the University of Arizona, session chairman, stressed the importance of identifying and removing unproductive practices, then making decisions regarding objectives of productivity and setting up monitoring capabilities.

## IBM Project

At IBM's Research Center in San Jose, Calif., five researchers, including speakers Eric Carlson and Stephen Zilles, went through this process four years ago. They began by reviewing mostly unpublished IBM studies of application development productivity.

They found that the methods of measuring productivity, whether by number of lines of code generated or man-days required, do not matter as long as ratios of input and output are used and these are consistent.

It also became obvious that application development productivity will not change as long as the high cost of and need for maintenance programming remains. Application productivity will not improve until there is more support for the early stages, including the ability to reuse instead of reinvent code, Carlson said.

The studies also revealed that application development productivity was less for interactive programs than batch programs, he said, pointing to the need for improved tools in this area.

Modularization of software applications does not necessarily lead to increased productivity, Carlson continued, adding that the process of factoring is better and more effective.

Factoring, which was developed at IBM's Research Group as a result of the study of productivity, is a method of "factoring out" blocks or pieces of code which are independent of the application of the program and therefore are reusable, Zilles said.

Richard Harris, manager of advanced corporate systems for Xerox Corp., said his company began trying to measure productivity in 1974. At the same time, Xerox was interested in looking at tools and techniques to increase productivity; its data dictionary and pre-compiler resulted from this process.

"We know there are things you can do which can increase your productivity because this is provable in our own

experience within the company," Harris said.

Those groups within Xerox that had the highest productivity had a mature

## CW at NCC

data base environment, a strong data base administration function, heavy use of the data dictionary and pre-compiler and on-line programming.

Konsynski noted that the ultimate measure of productivity is how much of an impact is made on the user's productivity. "We are tool builders building tools for tool builders."

CW Photo by A. Dooley

Lear Siegler railroaded attendees into its booth.

## Only to Systems Managers who want to get huge productivity gains on CICS

Virtual Systems Software, Inc.

### VSS offers tools to increase productivity: CICS Interactive COBOL Symbolic Debugging System

#### Features:

- Special design for COBOL programmers
- Zero learning curve
- COBOL-oriented debugging commands

#### Results:

- 98% of all CICS COBOL program errors can be found and corrected in a **single debugging session** without recompiling the application program
- More than **1000% increase** in programmer productivity

**Illusion** provides spooling support for CICS printer terminals

**Discovery**, a CICS transaction that interactively displays VSAM dataset attributes and statistics

## DATA SYSTEMS for INDUSTRY

3450 E. Spring Street, Long Beach, CA 90806  
(213) 595-8741

Six 'pioneers' who helped develop the first production model of Univac I reminisced recently before a mock-up of that CPU, which was displayed at NCC. Inspecting original program records and circuit components were (left to right) Cedric Lee, A.B. Tonik, Jean G. Smith, Neil MacMillan, Arthur Gehring and Oscar B. Hobb.

## Pioneer Day—Misty Eyes, Laughs, Standing Ovation

By Marguerite Zientara  
CW Staff

CHICAGO — Take eight computer pioneers, an audience of 500 and Dr. Carl Hammer as emcee, mix well and what do you get? Two National Computer Conference sessions that saw plenty of laughter, some misty eyes, one standing ovation and the presentation of a huge brass plaque during NCC's Pioneer Day celebration held here last week.

The standing ovation was accorded the indomitable Dr. Grace Murray Hopper, one of the developers of Cobol, after an articulate and entertaining speech describing the early work on Univac I, the first commercial computer.

And the brass plaque was presented by Hammer to Daniel B. Levine, deputy director and acting director of the U.S. Census Bureau, the first Univac I user. The plaque, signed by officers of the American Federation of Information Processing Societies, cited the improved "quality of life for all people" that has resulted indirectly from the bureau's placement of its fateful order for Univac I.

The first session of the afternoon featured four pioneers who discussed their seminal work on the machine, including internal developments and the image they planned to create with the Univac I data processing system.

Present besides Hopper were J. Presper Eckert of the original Eckert-Mauchly team, now vice-president of Sperry Univac; T.H. Bonn, director of the computer research laboratory at the Sperry Research Center in Sudbury, Mass., who discussed hardware developments of the system; and Erwin Tomashi, chairman of the board of Dataproducts Corp. and founder of the Charles Babbage Institute, who recalled the marketing of Univac I.

Session Two was dedicated to the outside world's perception of the Univac I and featured the following speakers: Dr. Mina Rees, president emeritus of City University of New York, who was in charge of the committee that selected Univac I for three government organizations; Arthur C. Nielsen Jr., chairman of A.C. Nielsen & Co., the firm that almost bought the first Univac I;

and CBS news correspondent Charles Collingwood, who was on hand for the first computer-aided presidential election projection in 1952.

Also speaking at the second session were Levine and Dr. Henry Tropp of the department of computer science at the University of San Francisco, who gave a brief historical summary of the events of 30 years ago.

### A Few Vignettes

The following vignettes represent only a few of the many fascinating thought-provoking tales that these pioneers had to tell:

- Eckert: "I'm often asked if I anticipated what the future held after the development of Univac I. Of course I didn't. I foresaw some of the events, but it all happened much faster than I expected. Who could have imagined that the development of the integrated circuit would follow so soon after the invention of the computer?"

- Hopper: Arising from the early need to copy code from each other's notebooks, "one of our startling discoveries was that programmers cannot copy things and programmers cannot add." The knowledge led to the development of the first compiler so the computer could take care of such tedious tasks.

- Hopper: "Betty [Holberton of the National Bureau of Standards] taught me to draw flowcharts, and I really wish we hadn't moved away from flowcharts. In multicomputer systems it is very important to know the structure of our systems so that we can indicate it to others."

- Hopper: "There is one great danger in computing today, and that is the phrase, 'But we've always done it that way.' If anyone here utters that phrase in the next year, I promise I'll instantly materialize beside you and haunt you for 24 hours and try to get you to change your mind."

- Tomashi: "The Univac I took 50 tons and 50 kilowatts of power to install. It was done on a Saturday so the street could be closed to traffic; a crane was mounted on the top of the building and it was hoisted from the street. Not just a window, but a whole section of the building was removed to allow the transfer."

# Spotting Flaws Early Seen Quality Assurance's Aim

By Phil Hirsch

CW Washington Bureau

CHICAGO — Of all the design flaws that occur in software development projects, 60% to 70% appear during the requirements analysis phase, when they can be fixed at minimal cost. Therefore, it is crucially important to have a quality assurance/review program that can spot these problems immediately.

So said Wayne Smith, director of quality assurance and business systems at Applied Information Development, Inc., Oak Brook, Ill., a custom programming firm. He was among the participants in a series of National Computer Conference sessions last week on implementation of DP-related technology transfer. As defined by the session chairman — Denny O. Wallace, of Illinois Tool Works, Inc. — the discussion covered implementation of hardware and/or software technology new to the implementing organization.

Smith illustrated the benefits of a quality assurance program by pointing out that an error which occurs during the requirements analysis phase of a software development project typically costs about \$1 to fix, but if the error isn't corrected until the end of the project, this cost rises to \$300 to \$400.

## Key Elements

Key elements of a successful quality assurance program, he added, include:

- Centralization of responsibility.
- Clearly stated implementation procedures which are made part of the project's day-to-day operating routine, and which have a clear relationship to cost/benefits.
- Sharing of responsibility for success of the project between the quality assurance representative and the project manager.
- The quality assurance/review program must provide data that is useful to the project management staff; it must not be simply an auditing process, Smith added. Also, there must be regular review of progress in relation to original goals.

At Smith's company, a checklist has been developed covering all phases of the software development process. It consists of questions which the project manager answers at frequent intervals. The answers are scored and the project is then placed in one of four categories. At the top of this hierarchy are those projects which have a high

probability of meeting their goals; at the bottom, those which have encountered "substantial problems."

## CW at NCC

Careful selection of quality assurance personnel is another key consideration. Smith suggested choosing senior analysts with project management experience rather than young technicians. Those selected should "know enough about the technology not to get snowed," he added. Tact, analytical ability and inquisitiveness are other desirable traits.

## Capacity Planning Called Management Issue

By Tom Henkel  
CW Staff

CHICAGO — Theorists may derive mathematical formulas for producing a snapshot of how much of a processor is actually being used, but the decision to buy hardware is a management decision.

So while mathematical formulas and complex technical methods used to evaluate processor performance are quite important to the capacity planning issue, they are not the *only* issue, according to Leonard D. Lipner of BGS Systems, Inc., in Waltham, Mass.

Lipner told attendees at a National Computer Conference session last week on the management issues in capacity planning that other important issues fall within the realm of the management function. Those issues include how to insure that work load forecasts are accurate, how to organize the DP facility for maximum resource utilization and how to oversee the computing process.

### Early Days

In the early days of computing, the notion of capacity planning was a relatively simple thing to deal with. When it looked like there was too much work for an existing computer system, the vendor was called in to upgrade or replace the system. Things have changed dramatically in the past 20 years, and many more decisions now go into the capacity planning process. There are, for example, more vendors on the scene offering a variety of mini-computers, microcomputers, software and both in-house and out-of-house DP services.

Distributed processing also gives the manager a viable option to extend a system's capacity, according to Al Williams, a capacity planner at Mobil Oil Co. in New York.

Information processing services take more and more of most firms' profits each year. Thus managers have to make the right decisions and be able to justify them. "Mistakes are more costly and easier to make," Williams said, noting that the expansion of the computing services business poses the highest potential for errors in system expansion decisions.

"Computing services now impact the day to day, and even the minute-to-minute, operation of companies," Williams said. He added that management must decide when a company needs a

computing service and when it is appropriate to expand the in-house computer system.

Speaking of the capacity planning

## CW at NCC

program that has been in operation for the past six years at Mobil, Williams said he leaves the technical evaluations to his computer staff. The various Mobil divisions are responsible for managing their own portion of the total system, but the expenditures for system upgrades are evaluated by the New York office.

But the Mobil system is slightly larger than average. The firm has the equivalent of 33 IBM 3033 processors. CPUs installed at Mobil range from a 4331 and two Digital Equipment Corp. Decsystem-2060 processors to seven 3033s. Other information functions, like word processing and image processing, also are governed by the capacity planning team, Williams said.

Mobil bases its capacity planning on a five-year plan, with an emphasis on the first two years. The long-term capacity plan is updated annually, and necessary changes are implemented on a one-year lead time, according to Williams.

However, the five-year plan only evaluates processors, based on monthly CPU usage figures collected each year. Peripherals are not included in the analysis until one year before a new processor, or an upgrade plan, is set to be installed. And provisions for simulations, what-if analysis and linear analysis are not included in the capacity planning outlook, Williams said.

'And This Little System is So Fast It Comes With Matching Disk Brakes!'

# Front-Office Support Urged Technology Transfer Issues Eyed

By Bill Laberis  
CW Staff

CHICAGO — The successful introduction of new computer technology to a business demands a strong managerial mandate coupled with a system of rewards for those who assist downstream in the planning and implementation.

But this front-office support cannot take the form of a unilateral management edict without running the risk of cramming the technology down the company's throat, thus sabotaging efforts to change and grow.

That was the message delivered last week by panelists in a National Computer Conference session titled "Technology Transfer — Management Issues," the first of three sessions dealing with the thorny technology transfer issue.

In addition to giving its unconditional support and guidance in introducing new technology — be it distributed data processing, structured analysis and programming or the data base approach — management must also scrutinize its own organization and decide what elements of it might impede implementation and acceptance of state-of-the-art technology.

"Management must sell and support the project as aggressively as it can, not just within its own ranks, but to everyone else who will be developing and ultimately using the new system," Charles L. Gold, manager of MIS planning at IBM, said.

## Bottom Line

"The bottom line is, if you want to expand fully with computerized technology you must do so with a user-friendly system," he said. "This means management must give the project a great deal of attention, involving a range of both DP and non-DP personnel in all stages of development."

Panelist John B. Belknap of Belknap Data Solutions, Ltd. said his company's recent survey of more than 800 large corporations which have introduced distributed data processing showed a consistently high level of upper management involvement in the planning process.

"In most cases non-DP people were heavily involved all the way through the various steps of implementation, although somewhat less so when it came down to vendor selection," Belknap said.

Based on some 700 phone inquiries, Belknap was able to determine that top management championed the DDP cause seven times in 10, actively supporting its introduction while avoiding running the show entirely on its own.

The survey also showed that the primary motives for introducing the new technology were an assumed need for

## CW at NCC

greater user involvement plus a strong desire for management to retain centralized corporate control while reducing the load on the best mainframe.

"The benefits [of successful technology transfer] were also borne out in the survey," Belknap added. "About 60% of the applications that resulted from using distributed data processing have been developed within the companies

since the technology was introduced. New technology really does spur innovation, if it is accepted."

In a presentation punctuated by his own technology transfer model, panelist J. David Benenati of Bendix Corp. likened the technology transfer path to an excursion through valleys and around hills, highlighting the pitfalls that await the ill-prepared.

"The company must take a structured approach each step of the way, with the emphasis on management sponsorship," Benenati said. "This implies taking a good look at the management structures and the environment in which the transfer is going to take place."

## "WHO WOULDN'T SMILE..."

### WITH A TEST DATA GENERATOR LIKE TUG

He's a project manager responsible for implementing a computer system. And he's smiling because every program was thoroughly tested and ready for production — on time. The reason? TUG — *Technalysis Utility Generator*.

TUG is a flexible and dynamic test data generator for program checkout and debugging. With TUG, you can develop and test every module in your system — without depending on other programs to drive and feed the module. TUG generates the exact data, calls and executes the module, and provides before and after images of the data areas.

TUG will improve productivity... speed testing turnaround and system implementation... enable more effective project control... and eliminate reruns.

#### OTHER REASONS TO SMILE:

- CSS... Corporate Support Systems (HP3000 Business Software)
- TACS... Technalysis Automated Conversion Service (COBOL to COBOL)
- TIPS... Technalysis Improved Productivity System (Preprocesses Source Code for Any Language)

PUT A  
LITTLE SMILE  
IN YOUR LIFE

## Computing Power Seen Spreading to Populace

By Jeffrey Beeler

CW West Coast Bureau

CHICAGO — Although government agencies and private corporations still control most of the world's available high technology, computing power is slowly beginning to find its way into the hands of the general populace, a National Computer Conference speaker noted here last week.

"Computers are no longer the exclusive property of large organizations," *Privacy Journal* editor and publisher Robert Ellis Smith said during an NCC program session on "Effects of Computers on Personal Life." "Increasingly, technological goodies are coming under the control of the people."

Just five years ago, Smith recalled, computing power was concentrated almost entirely in large bureaucracies

### CW at NCC

and institutions rather than in the hands of the people those organizations were supposed to serve.

The Internal Revenue Service (IRS), for example, operated a large Martinsburg, W. Va., computing center for processing federal tax returns, but provided no comparable service to help taxpayers complete their 1040 forms. Likewise, police departments maintained large crime information systems, but offered no corresponding facilities to aid crime victims.

#### Steady Democratization

Since then, the patterns of computer use within the IRS and the police community have changed only slightly. But despite that fact, computing power is being steadily democratized, Smith said.

Smith cited examples of growing computer use by the physically handicapped and of private corporations that are increasingly allowing their employees to work from on-line terminals in the home rather than drive each morning to their offices.

Smith attributed the increasing popularization of computing partly to the rapid growth in the industry's hardware manufacturing capability.

Two years ago, he said, some four million microprocessors were produced annually. Today, the same number of components are assembled each week.

"Computer production now exceeds the number of live births, and by 1984, computer volume will be greater than the total world population," he predicted.

#### Handgun Argument

People who deride the increasing movement of computing into the home and into the hands of private individuals often justify their beliefs with a line of reasoning reminiscent of handgun advocates.

Such people argue for the "right to bear terminals" on the ground that personal ownership of computer equipment would help protect the public if the federal government someday decided to use high technology against its citizens, the *Privacy Journal* editor said.

But although computers are making increasing inroads into the ranks of the common man, the trends in high-technology use are not entirely encouraging, Smith added. He cited the case of the federal Department of Human Services, which recently dusted off an old proposal to create a nationwide data bank listing every individual who had ever received a grant or loan.

Known as the National Recipients System, the proposed data bank would be the "noncriminal equivalent of the FBI's National Crime Information Center" and would affect an estimated one-third of all U.S. households, Smith said.

## Mainframers' Mistake

## Vendors Warned of Micro Incompatibility

By Tim Scannell  
CW Staff

CHICAGO — The microcomputer industry is making the same mistake the minicomputer and mainframe industries made during their early periods. One vendor's hardware is designed not to communicate with another vendor's machine, and money is being poured into software that cannot easily be transferred from one system to the next.

That was the clear warning from publisher Adam Osborne, whose keynote address on new directions for personal computers kicked off the Personal Computing Festival at the National Computer Conference here last week.

If this type of practice continues, Osborne cautioned, manufacturers will be so busy reinventing the wheel that there never will be truly low-cost computing — at least not from U.S. manufacturers. Because "if we don't do it, the Japanese or somebody else will, and we'll have nobody to blame but ourselves."

## What, Where, Why

Speaking to an overflow crowd, Osborne talked about the what, where and why of the personal computing industry and noted some changes he believes will take place in the very near future. Osborne drew comparisons between the "chance, luck and happenstance" of yesterday's microcomputer development world and the Wall Street investment-glutted industry of today.

In order to get a clearer picture of where they are going and exactly where they should be, manufacturers have to pause and take a look at where they've been. Unfortunately, most companies are operating "like the guy who confused arson with incest and set fire to his sister," Osborne said.

In the past, many of the microcomputer companies were founded and run by "techies," Osborne explained. Although the hardware and software back then was relatively bad, it did have a redeeming value. It had a commonality with competing systems, which turned out to be the driving force that launched the entire industry.

Many of these early companies did not survive because they were poorly managed, he added. The "techies"

## CW at NCC

knew how to build or package a system, but couldn't survive the business aspects of the industry.

Now, however, the tables have turned and most microcomputer manufacturers have that needed business savvy. Companies like Apple Computer, Inc., Commodore Business Machines, Inc. and Tandy Corp. brought a credibility to the industry through their good business sense, he said.

Unfortunately, these highly successful firms are ignoring the principles "that made the microcomputer industry happen in the first place," Osborne stated. In an effort to stem competition, every one of these micro giants is building systems and developing software that can't be used outside a particular vendor's domain. As a result, while the companies may survive, the momentum that has driven the whole industry has died down.

Most companies are successful because they are adequate, Osborne claimed. They've learned the IBM-authored lesson that "to be No. 1 you don't have to be the best or even be good. You just have to be adequate and well-supported."

NCC? 'It's a miracle!'

## Automatic Backup &amp; Recovery

- Incremental Backup of Datasets
- Archive Inactive Datasets
- Automatic Volume Reconstruction
- Dynamic Allocation of Disk Space
- Migration Between Unlike Devices
- Automatic Tracking of Backup Tapes
- Complete Volume & Dataset Reports
- Free 30 Day Trial — IBM OS, VS & MVS

ABR provides an efficient and easy to use method of managing the space on direct access volumes. Disk volume and dataset backup can be automated based on last reference date and update characteristics. Datasets which have not been used for a time period can be automatically archived, freeing the disk space for more productive use.

## Panel: Computers Not Creating Generation of Math 'Whiz Kids'

By Jake Kirchner

CW West Coast Bureau  
CHICAGO — By exposing our children to computers in school are we creating a generation of mathematical whiz kids with no interest in artistic creativity, spontaneity or social intercourse?

"No," was the consensus at a National Computer Conference session last week. That optimistic conclusion was not unequivocal, but speakers and attendees at the "Computers and the Future of Literacy" session generally agreed children gain more than they lose through interaction with microcomputers.

The basic question was posed by Session Chairman Frederick L. Goodman of the University of Michigan, who raised questions about possibly adverse effects of "micros and their almost ubiquitous emergence in schools."

Technology, he said, "is changing what it means to be literate in some subtle and important ways." Literacy, he continued, "values imprecision and ambiguity," but computing, while not an entirely exact science, does demand increased precision.

While children need to learn the value of precision, they may overreact to the "seduction" of computers, Goodman said. If that happens, he asked, will computers constrain children's development in ways that involve some loss to society?

### Finding Answers

Goodman said he does not have the answers to these questions, but suggested, "highly creative people will be seduced into a definition of what it means to be creative that is highly different from what it meant in the past."

Another panelist, Lawrence B. Heilprin of the University of Maryland Computer Science Department, agreed that increased interaction with computers "diminishes the time spent in individual, personal contact" and "tends to displace traditional cultural knowledge — art, poetry, history and other 'classic' fields."

But there are important "pros" to those "cons," he said. For one, "exposure to

computers heightens the sense of order in nature, of precise laws." According to

ness."

Other panelists and audience members argued passionately

## CW at NCC

Heilprin, "it emphasizes relations and their treatment in science, engineering and law, as well as in everyday busi-

ness that the potential of computers to unlock childrens' creativity far outweighs any threat of forced regimentation.

# Standards Seen Needed for Data Dictionaries

By Tom Henkel

CW Staff

CHICAGO — Data dictionaries can be a boon to data base management, but they can also be a new kind of systems bottleneck. It all depends on how the dictionary is designed, and a team of researchers speaking before the National Computer Conference held here last week recommended standardization of data dictionary designs as a

solution.

Data dictionaries, or information resource dictionary systems, are software facilities that keep track of resources, such as files and groups of data elements. The dictionary develops a relationship among these elements.

Michael Meyer, with Honeywell, Inc.'s McLean, Va., installation, said that in an era of rapidly declining hardware costs and soaring software ex-

penses, software that cuts the programmer's time is an essential element of a computer

by a data dictionary. The software facility can give the systems manager more control

## CW at NCC

system.

Essential parts of a data processing system, such as a file management system, end-user facilities and data entry facilities, can all be managed

over the system, solve the problem of data elements ownership and cut the total cost of system development, Meyer said.

But the problem with current

data dictionaries is they tend to be developed differently. Meyer noted there are at least three organizations working to develop standards for data dictionaries.

The British Working Party is trying to standardize a conceptual design for data dictionaries, and two U.S. groups — the National Bureau of Standards and the American National Standards Institute — are working to develop standards that could be used in the field.

But for data dictionary standards to be useful, Meyer said they must be applicable to the whole system life cycle. As data dictionary technology advances, use of the facility will grow closer to the design phase of systems development. At that point, standardization becomes even more critical to insure that systems are built in a similar fashion.

### Handle Expansion

In addition, a data dictionary must be able to effectively handle systems expansion and changes to the design. Noting that especially in the area of software, the specifications for a system have often dramatically changed before the ink is dry on the coding pad, Meyer said the data dictionary must be flexible enough to handle constant change.

It must be able to handle new attributes and clearly define relationships among changing data elements to be effective. And the dictionary must also be able to adapt to technological changes, Meyer said.

The trend in systems design is to steer away from keeping track of physical files to governing logical, or like files. That makes the job of the data dictionary a bit more complex, but it also forces the data dictionary to perform a more important task.

When programs that affect the same group of files are introduced from a variety of sources, it takes extra effort on the programmer's part to make sure parts of one program don't have an adverse effect on the data or other programs that use a common file. A properly designed data dictionary can perform that function and free up expensive programmers for more developmental duties, Meyer said.

DEC's the world's leading supplier of general purpose minicomputers. And if you're a DEC user, you know that their equipment is excellent.

And that their pricing often isn't.

In fact, it can be quite a problem. So can DEC's slow delivery (which can be easily 6-9 months), restricted service, and... well, you're a DEC user. You know the problems better than anybody.

But now, you also know about us.

We're Data Systems Services. And we're the people who can do what we believe DEC can't: deliver in days, not months; provide fast, competent service for DEC and non-DEC equipment through an established third party organization; supply DEC-compatible sub-

systems at a fraction of DEC's prices; and more.

Like complete subsystem testing and burn-in before delivery. Formatted disk packs. An inventory of plug-to-plug peripherals. Turn-key installations. And trade-in allowances, too.

Our only business is to serve the DEC user. And in a totally professional way that we're willing to have you compare with DEC. Or anyone else.

Of course, there are other suppliers you can call. But do they offer state-of-the-art subsystems? Full burn-in and formatting? Are their peripherals completely media compatible and software transparent? Do they offer reliable maintenance and service? Will

they try to sell you more than you need? Or less than you need?

Here's what you really need:

# Today's Historians Likened to 'Seed Corn'

By Marguerite Zientara  
CW Staff

CHICAGO — The handful of computer historians in the world today represent the "seed corn" of coming growth in the area and indicate the maturity of the industry itself, according to Paul Armer, executive secretary of The Charles Babbage Institute.

As session leader of "Perspectives on the History of Computing" at the National Computer Conference held here last week, Armer noted the recent increased interest in computing's history as embodied in several newly or about-to-be published books and observed that the field of computer history is now at the stage where computer science itself was in the 1950s.

While it is fairly commonly known

that the German scientist Konrad Zuse constructed the first automatic, programmable calculating machine dur-

## CW at NCC

ing World War II, it is less commonly realized that he also made significant contributions to the theory of computer science, as well as to the design of the machines themselves, according to speaker Paul Ceruzzi, assistant professor in the Department of Science and Technology at Texas Tech University in Lubbock, Texas.

Zuse studied at the Technical College of Berlin in the 1930s, concentrating on civil and mechanical engineering, Ce-

ruzzi said. One of the problems he encountered in his studies was that of static indeterminate loads, which called for complicated mathematical formulas.

It was through this need that Zuse got the idea to mechanize the routine calculations required and to solve systems of linear equations. Zuse had no training in advanced mathematics or electrical engineering, although he was skilled in mechanics.

In 1936 Zuse recognized that the binary system was the best one to be used by automatic calculating machines, long before the idea was commonplace.

At that time, Zuse designed a method of representing binary digits through a mechanical system, primarily mechan-

ical relays.

Zuse ran into problems in the design of the arithmetic unit of the proposed machine and backed off the puzzle in 1937. At that point, he developed an abstract representation of binary switching, working out the relationships among the three fundamental notations AND, OR and NOT.

Zuse soon returned to the construction of a digital device, a project that resulted in the construction, aided by Helmut Schreyer, of the Z-1 computer.

The Z-1 never functioned correctly because of problems in the mechanical switching elements, Ceruzzi noted. The next machine, the Z-2, featured electromagnetic circuits, and the Z-3 was an all-relay device, the original of which was destroyed in 1945 in the final days of World War II.

Work on the Z-4 began also during the last days of the war, but was interrupted when Zuse was evacuated from Germany and migrated to an Alpine village, taking his machine with him.

Since the machine was stored in a barn with sporadic supplies of electricity, Zuse couldn't do much work on it; after its early head start on America — German work on computer development came to a halt.

Zuse then concentrated on theoretical work and designed his "Plan Kalkul" system of notation, containing many of the features of the higher-level languages.

Zuse also designed what would today be a hard-wired compiler, Ceruzzi said, and independently established the isomorphism of statements of symbolic logic to relay circuits.

Zuse went on to found a company that was later absorbed by Siemens and which was in the 1950s No. 2 in Germany after IBM. He is still very active today, Ceruzzi noted.

### Development Centers

Speaker Martin Campbell-Kelly, lecturer on computer history in the Computer Science Department at the University of Warwick in Coventry, England, discussed the three major centers of computer development in England around 1950: Cambridge University (developer of Edsac), Manchester University (developer of Mark I) and the National Physical Laboratory (developer of the Pilot ACE).

After displaying slides showing a subroutine for a square root in each of the three centers' notations, Campbell-Kelly noted that Cambridge was by far the most advanced in programming development at that time.

Most of the subsequent early computers drew on Cambridge's expertise, he noted, including Mark I, Mark I\*, Pegasus, HEC 2M, HEC 4, Elliott 402, Deuce, Mosaic, Leo, Treac and Nicholas.

## NO MEMORY PARITY? Good luck!

BILLINGS BC-12 FD COMPUTER SYSTEM

The difference between a "hobby" computer and a "professional" system can mean the difference between success and failure when accuracy and dependability are at stake.

For example, professional computers go to the extra expense of adding memory parity. This feature uses an extra 64K Bits of RAM to monitor the condition of the computer's memory tanks. When a memory chip malfunctions, the

memory parity watchdog immediately identifies the malfunction without losing data integrity.

In "hobby" computers without the memory parity feature, a memory error goes undetected often causing the program to "walk" all over the customers data files. To a hobbyist such problems are an interesting challenge to test his skill. To the businessman, they are expensive and intolerable.

All Billings Computer Systems have been designed for professional applications. Every machine has full memory parity capabilities. These features cost a little more, but we believe that a few dollars invested in good equipment will result in substantial savings for years to come for the serious computer user. If you would like to know more about Billings quality products, please contact us today.

# DOMAIN PROCESSING

Apollo Computer has finally put an end to the computer compromise.

With the introduction of Apollo's DOMAIN, you can now get both the resource and data sharing capabilities of today's best timesharing systems with all the performance and responsiveness of a dedicated mini—all in one cost-effective system.

DOMAIN (Distributed Operating Multi-Access Interactive Network) processing is a new and dramatically different approach to computing. It's a high performance

local network of dedicated computers in a distributed environment. Its unique architecture is designed to allow each user maximum autonomy within the network, while retaining the vital communications and resource sharing capability among every user.

The principal advantages of DOMAIN are greater system productivity and total system cost-effectiveness. The key to these advantages are:

A high level of predictable performance, including a VLSI CPU (with 32-bit architecture) dedicated to each user on the network, executing in a 16 megabyte demand paged virtual memory.

A new mode of user machine interactivity, including a high-resolution bit map display permitting each user to run multiple programs simultaneously.

A network level modularity, providing a system with a very high performance level, a wide range of growth capability, and a vast improvement in system reliability and availability.

DOMAIN is designed to accommodate a wide range of application environments, including scientific, engineering, research, finance, CAD/CAM, text processing and transaction processing. The system is capable of running very large, single program applications, as well as multiple program applications.

By configuring dedicated CPU's in a network architecture, Apollo's DOMAIN really does let you have your cake and eat it too.

For more information on DOMAIN processing and Apollo Computer, simply fill out and return the coupon below.

## Beal Urges New Breed Of Informatics Expert

By Jake Kirchner

CW Washington Bureau

CHICAGO — Delivering a National Computer Conference keynote address last week, Special Presidential Assistant Dr. Richard S. Beal called for a new breed of "informatics generalist" to assist the country in its transformation into an information society.

"What is constipating society is a fail-

ure for information access is becoming more pressing every year.

Unfortunately, he said, the White House information facilities have fallen far behind those of other institutions. "In meeting the management challenges of the modern presidency, we find that we don't even have the right kind of wires in the building," Beal said, noting he had difficulty getting "a simple graphics terminal" installed in his office.

The new administration is well aware of these problems, Beal said. He read from a White House telegram to the NCC in which Reagan noted "in the years ahead, new technologies will be required to meet the ever-increasing demands of our modern society to ensure America's growth."

The problems are not limited to the executive branch of the government, Beal continued, but are being felt in all branches of the federal bureaucracy.

"There is a lot of catching up to do in the '80s," he said, pointing to the growing obsolescence of government computer systems. He also noted statistics produced recently with IBM's aid that project the government falling further and further behind the private sector in sophisticated information technology use.

The federal government currently has one terminal for every 36 employees, compared to one terminal for every 48 workers in the general American workforce, according to the statistics.

In the near future, Beal said, every 10 employees in the general work force will have access to a computer terminal, but by then the government ratio will only be one terminal per 20 workers.

The problem is directly related to the changing roles of all institutions, not just the government, as the confluence of computing, communications and information remakes the face of our society, Beal stressed.

It is clear, he concluded, that informatics "raises a previously unaddressed set of questions" about federal mechanisms and government investment in information development and dissemination.

## CW at NCC

ure to make decisions," according to Beal, White House assistant for planning and evaluation. Today's decision makers "simply do not know how to use the technology" that is becoming available, he said.

We cannot wait for a whole new generation of decision makers, he continued. "Decision makers have to lead and cannot lag in comprehending and adopting" the technology. In the near future, he concluded, they will have to rely on informatics generalists who can adopt the technology to new decision-making systems.

Beal foresees these generalists as experts in system design, data acquisition, data reduction and dissemination and other technological specialties needed by today's managers.

"Such people are made, not born," he said. "Such people are not technologists, but effective use of information and information technology should be their second nature."

From his own perspective, Beal said the need for such assistance "is even more acute in the White House... For us," he said, "the stakes are high." The value of policies and decisions made in the White House "are disproportionate to the cost of producing them," he explained.

And the costs are not low, he said. Pointing out presidential decisions affect the whole federal budget, Beal valued President Reagan's time at \$100,000 per second.

"For the first time in the Presidency we have in the White House a professional communicator," Beal said of Reagan, arguing the White House's

## Panel Criticizes ISO Model For Linkage Shortcomings

By Brad Schultz  
CW Staff

CHICAGO — Many IBM customers want smooth communications among different brands of DP equipment, an

### CW at NCC

IBM scientist told a National Computer Conference session last week, but other speakers joined him in claiming the International Standards Organization's (ISO) model for open systems interconnection fails to satisfy fully this demand.

The ISO model — a prototype network architecture comprised of seven protocol layers — is not yet fully defined, the speakers noted. However, Digital Technology, Inc.'s John Day, who has assisted efforts to develop the model, said a draft of all seven layers may be adopted by ISO this summer.

ISO has adopted three layers thus far, corresponding to the physical interfacing of terminal equipment, the passage of data from terminal equipment to the user's interface with the public network and transfer across that interface to the public network.

IBM's Systems Network Architecture (SNA), which began as a basis for products in 1974, is also a hierarchy of protocol layers, but differs from the emerging ISO design in constraints on communications between different product brands and the relation of host systems to dispersed machines.

#### SNA vs. ISO

Matt Hess of IBM's operation in Research Triangle Park, N.C., said ISO's model for open systems interconnection addresses communications between end-user systems, but does not handle important considerations of how the user may control systems in different vendor environments.

SNA, on the other hand, has come to bear on both links between end-user systems and the control issues, Hess maintained.

Nevertheless, many experts have criticized SNA as allegedly locking the user into sole-source dependence on IBM.

John G. Fletcher, who developed the Octopus network for Lawrence Livermore Laboratories, told the conference session that definitions of protocols in the ISO model are too obscure, ambiguous and noninterdependent. The ISO model diffuses user management responsibilities, Fletcher said, suggesting that the model delegates too much authority for effective overall controls to exist.

Dr. Vinton G. Cerf of the Defense Department's Advanced Research Projects Agency said data communications for the nation's military calls for network architectures with features ISO and most commercial vendors have not developed. The armed forces may, to an extent, run systems primarily developed for commercial DP, but unsuitable for wartime situations where transmission wires are burned up or microwave broadcasting is jammed.

Cerf said standardization of network architectures may allow the National Bureau of Standards to insist that the

General Services Administration order compliance with protocol standards in federal DP installations.

However, Fletcher said Lawrence Livermore, which serves the Department of Energy, is reluctant to adopt the ISO model until analysis shows the research institute's needs would then be satisfied.

The conference panel agreed that ISO's model has at least standardized the vocabulary for discussing issues of network architectures, allowing experts to focus on what those issues are. IBM's Hess added that the ISO model seems likely to become the basis for a raft of future protocol standards, some of which may be recognized by SNA.

## Packetized Voice Seen Impacting Workstations

By Phil Hirsch

CW Washington Bureau

CHICAGO — Development of personal workstations far more sophisticated than those now becoming available is one likely result of current research on packetized voice transmission, said Robert E. Kahn of the Advanced Research Projects Agency (Arpa) here.

Kahn, who participated in a National Computer Conference overview session on "Packet Speech Communications," said Arpa — a Defense Department research agency — is now experimentally transmitting packetized voice messages through a multiplexer that interfaces four local-area networks to a 3M bit/sec satellite chan-

nel. Each local-area network operates at 1.5M bit/sec and services a number of voice terminals. Packetizing/depac-

### CW at NCC

etizing occurs at the terminals.

A key benefit of using packet networks to transmit voice messages is that it greatly improves bandwidth utilization, Kahn pointed out. He estimated that, as a result, utilization of a given amount of bandwidth can be improved one-and-a-half to three times when packet switching is substituted for circuit switching.

Transmitting voice in digital form, besides making it possible to exploit packetization, also allows the message to be interpreted by a machine — thus permitting humans to interact directly with computers rather than through a keyboard, pointed out session chairman Danny Cohen of the University of Southern California.

"The cost of digital speech is decreasing at a remarkable rate," Cohen explained. "Therefore, even though the cost of digital speech may still appear prohibitive, the situation is bound to change in the near future."

#### Better Understanding

Until recently, the task of converting analog voice signals into digital form "was not well understood," Cohen said, "and it required computations at rates that could be provided only by supercomputers. But as a result of the work of many researchers in several institutes, a better algorithmic understanding of the vocoding task has recently been achieved. Recent developments in computer technology and architecture as well as in the very large-scale integration field allow the implementation of these algorithms by a compact hardware configuration."

Packet-switching technology "has proved capable of supporting real-time speech applications. Recent developments in signal processing, vocoding algorithms and hardware have made the implementation of voice terminals a very practical means of voice communications. The interest that several telephone companies have shown in packet speech and the amount of effort they are investing in it are a significant testimony to its importance and potential, he concluded.

# AT LAST, A DATA TERMINAL COMPANY THAT ISN'T LOYAL TO ANYONE.

Call a manufacturer and you'll hear one story: Me, me, me.

Call Selecterm and you'll hear the whole story: Which manufacturer is best for what kind of business, where the new technology is coming from, which terminal and how many.

Selecterm leases the finest data terminal equipment from all the major manufacturers of terminals. We don't just push one (unless we think he happens to be the best one for you).

We won't recommend more terminals than we think you need.

**SELECTERM**

We won't hold anything back. If there's better equipment coming out in a month or two, we'll tell you to wait.

You see, we're in business to offer you management help on the selection and service of the best terminal equipment.

The best doesn't mean the one that's most easily available, or the one that brings in the highest commission.

The best means the one that's best for you.

Because what's best for you is best for us.

To our way of thinking, an open mind is a lot better than blind loyalty.

# BOEING BOUGHT OUR FIRST 32-BIT COMPUTER. SIGHT UNSEEN.

Nobody buys the first of anything.

So whatever possessed Boeing to take the first ECLIPSE MV/8000™ computer off our production line?

They believed we'd deliver what we said we would. Because we always had.

In this case we told them we'd deliver a 32-bit system unlike any other on the market.

One with the reliability of VLSI program array logic technology. A machine bandwidth 2-4 times faster than the nearest virtual memory competition. And a separate diagnostic processor with the most advanced hardware protection you can get. And the hardware features on this state-of-the-art system supported by software. On the day of delivery. (Something some computer companies never get done.)

Which was precisely what they needed to work with the ECLIPSE® systems supporting development of the flight control/avionic systems for their new 757 and 767 airplanes. The first integrated avionic systems built around digital technology for commercial applications.

As it turned out, their MV/8000 system arrived ahead of schedule. Got up and running ahead of schedule. And from day one, has lived up to their expectations.

We tell you this story to point out that

in an industry noted for abandoning its customers with every advance in technology, we have continued to take care of our own.

So much so that you can run your NOVA® and ECLIPSE code on our latest, state-of-the-art MV/8000 system.

This is not meaningless generosity on our part. It is a business

decision. The one upon which this company was founded.

If you would like detailed information about our new MV/8000 system, call your local Data General sales office. Or write us at MS C 228, 4400 Computer Drive, Westboro, MA 01580.

And should that information tempt you to buy an MV/8000 system, there is one more thing we would like to point out.

You will not be the first.

**Data General**  
We take care of our own.

## None Universally Acceptable DBMS Styles Held to Differ

By Jeffrey Beeler

CW West Coast Bureau

CHICAGO — No single style of distributed data base management system (DBMS) is equally suitable for all users and applications, a Univac spokesman said during the National Computer Conference.

Because data base requirements vary widely from installation to installation, users need a broad selection of DBMS approaches, Richard Greene, who works in Univac's data management systems operation in Blue Bell, Pa., said in a session entitled "Distributed DBMS in the Transaction Environment."

Users also have to choose carefully among the various DBMS styles to make sure their preferred approach conforms closely to their individual application needs.

To underscore his message, Greene likened DBMS approaches in at least one important respect to programming languages. The quality of a programming language, he said, depends on the extent to which it fits the characteristics of its intended application, and exactly the same principle applies to DBMS styles.

One of the many DBMS styles now under development or already available for users is the so-called "cooperative multithread" approach, which Univac has recently devised in an attempt to provide a quantitative method for evaluating data base system performance, Greene said.

Other session participants included Dr. John Smith, a research codirector for the Cambridge, Mass.-based Computer Corp. of America (CCA); and Paul De Citre, a research scientist with the University of Grenoble in France.

### Retrieval Problems

Smith highlighted a technical problem common to many DBMS users: the need to retrieve data from multiple, heterogeneous data bases.

To overcome that hurdle, Smith and his CCA colleagues have developed a system known as Multibase, which allows users to integrate different kinds of data bases, he said. In essence, Multibase

makes heterogeneous DBMS, even those situated in geographically widespread regions or associated with different vendors' hardware, seem like one to their users.

The prime objective in developing and supplying Multi-

base, Smith said, is to provide rapid responses to inquiries

involving different data bases.

A secondary goal is to "support the [transfer] of applications from an existing collection of data bases to another, more advanced collection."

# Data Base Technology Said Lagging Theory

By Tom Henkel  
CW Staff

CHICAGO — Data base machines are getting better, but the technology is still lagging behind the somewhat extensive list of theories on the subject, according to a panel of researchers.

Speaking before attendees at the National Computer Conference last week, session leader C.R. Carlson, with the Naperville, Ill., division of

Bell Laboratories, noted this year's NCC had at least two vendors offering data base machines. Technology in the data base machine field is still far from its potential.

Data base machines, Carlson said, are used to take the load off the host processor in a data base environment. Often a host can become bogged down with queries to a data base management system (DBMS). By placing a processor — or

group of processors — between the host and disk storage, the host processor is, at

least theoretically, relieved of the burden of processing DBMS queries, Carlson said.

There are many ways to implement such a system, technically called a back-end processor, but the method that best suits a given application depends on the user's needs

and, to some extent, the philosophy of the system developer, Carlson said.

"There is no single machine that meets everyone's needs," Carlson said, noting there are

two basic ways to construct a back-end processor. The question can be viewed from a single or multiprocessing point of view. In the single processing philosophy a general-purpose processor is often used as the go-between. In the multiprocessing environment dedicated processors are often used between the host and disk storage. Some data base machines use a combination of general-purpose and dedicated processors, Carlson said.

## Back-End Processors

While there have been varying degrees of success with data base machines, Carlson pointed out that research has shown some ways of improving the success rate with back-end processors.

First, Carlson said, the choice of disk storage is important. Fixed-head disk drives work well with some systems, and floating-head drives work better with others.

How data is stored is also an important factor. Carlson said users must prioritize their data and store it in a hierarchical fashion.

Data that is used frequently should be stored closer to the end user than infrequently used data. That makes it easier for the data base processor to find the data, get it out of disk or cache memory and send it to the host, which will then process it and present an answer to an end user's query.

One such system is being developed by Oki Electric Industry Co., Ltd. in Tokyo. Speaking for the company, Sadayuki Hikita said Oki's Content Addressable Database Access Machines (Cadam) employ three 16-bit microcomputers linked as one processing unit.

Other panelists were Mamoru Maekawa, with the University of Tokyo, and Sakti Pramanik Indiana University and Purdue University.

## Introducing Magic Aisle® X

The MAXimum in high density storage.  
Doubles capacity and saves space.

Have you ever seen sardines packed loosely in a can? Of course not. Because space is used most efficiently when they're lined up neatly and orderly, fin-to-fin.

The same principle applies to your computer room storage. If you're using stationary cabinet or open shelf storage, you're wasting space.

That's why we're introducing the new Magic Aisle X series. It's the multimedia storage system Acme Visible designed for the computer center — to save you space, time and money. MAXimum space savings.

Now you can let Magic Aisle compact mobile shelving double your storage capacity. Units slide together eliminating unnecessary aisle space.

New cantilevered shelf storage.

With adjustable levels of storage on each side, units make maximum use of every cubic foot.

### MAXimum time savings.

Magic Aisle gives you fast access to whatever information you need. At a push of a button or turn of a

handle, these track-mounted units slide open to allow entry at the proper location. New cantilevered shelving allows fast scanning over an entire storage bank. Add new KromaCode® color-coded tape reel labels to the system and filing time can be cut up to 40%. Eliminates misfiles, too.

### MAXimum flexibility.

Magic Aisle provides storage accessories specially adapted to many different types of media. For tape reels, disk packs, data binders, printouts and more.

### MAXimum ease of installation

Why risk excessive downtime with units that require tracks built into your floors?

Magic Aisle utilizes a new modular track and deck system that mounts directly on current raised flooring. Installation is fast, clean and economical.

Your existing stationary shelving can also be incorporated into the Magic Aisle system. Simply put your current storage units on carriages and tracks with the rest of your new Magic Aisle units.

### Another new idea from Acme Visible.

Magic Aisle X series is just one of the many new systems Acme Visible has designed to meet the needs of information management.

Find out what else is new. Call us collect at 804-823-4171 or return the coupon below.

## Advances in DBMS Create Gap in Security, Control

By Bill Laberis  
CW Staff

CHICAGO — Galloping technological advances in data base management systems (DBMS) and the manifestation of those advances in business are creating a security and control gap — one that can be of nightmarish proportions for data base auditors.

The shared data environment must be designed from the beginning with an eye toward control, yet in all too many systems the control and security factors are considered after the fact. Then the auditor is called in to make sense of what may be a critical security problem, despite the fact that adequate control techniques are usually avail-

ble in the design stages.

That was the sobering message delivered last week by a panel of three seasoned field and internal auditors in

### CW at NCC

a National Computer Conference session titled "Audit and Control in a Data Base Environment."

"This is kind of a situation which has fostered the common belief that DP auditors are corporate commandos who wear a three-piece suit, arrive after the battle to criticize the survivors and then shoot the wounded," Michael Stoneheme, field auditor for Coopers and Lybrand in Toronto, said. Stoneheme described the data base environment as one characterized by an increasingly complex sharing of data, data shared among autonomous departments rather than by individuals exclusively. He said this rapidly changing environment is one in which an auditor "no longer looks at a simple one-to-one data relationship where he knows who has access to what data."

#### Lack of Personnel

Moreover, it is an environment in which there is an acute lack of personnel capable of handling and utilizing the continuous flow of new and innovative software developments that the vendors are madly churning out.

"With the number of data bases and systems out now — a number growing very fast — the audit function has become complicated even in some of the simpler routines," Stoneheme said.

To combat potential security and control problems, DP departments should act on a management mandate to build a better organizational infrastructure to minimize risk as much as possible. "That is, a business has to try and institute a data base system so that the level of risk built in is a manageable quantity, one addressed in the planning stages," Stoneheme said.

When asked, however, Stoneheme could not quantify what a manageable quantity of risk might be for any particular company, saying that overall control and security problem areas are diminished with careful planning.

Wally Pugh, national director of DP audit at Price Waterhouse and Co., said one factor that can affect control techniques in the data base environment is the migration of controls from the application program to the data base itself.

Among the techniques to be considered in the planning stages is implicit restriction of access to the data base's various subschemata.

In addition, system designers can make use of the encryption of security "locks and keys" and can build into the design the ability to monitor and analyze DBMS design codes.

But a potentially more serious concern in the development of data base controls lies in the intransigence of many system designers who chronically fail to "sit down in the design stages and bother to discuss with anyone just how they are going to build the controls in," said panelist Wayne Gould, vice-president and internal auditor at Bankers Trust Co. of New York.

## MCBA Software.

## When hard work is not your game.

MCBA is a software house that specializes in developing and supporting business application packages for mini-computers. We license our packages to hardware manufacturers, OEM's, ISO's, System Integrators, other software houses, and End Users who have their own support resources. Licensees receive Source Code, complete documentation, and one year's warranty.

## Dearth of Good Ideas

# Small Systems Language Technology Attacked

By Robert Batt

CW West Coast Bureau

CHICAGO — A strong attack on the use of outmoded technology in the use of programming languages for small systems was made here by Elizabeth Rather, vice-president of Forth, Inc. on the opening day of the National Computer Conference here last week.

Speaking to a packed audience of programmers and systems analysts, Rather said the software industry was suffering from a dearth of good ideas, despite the fact that the industry had been through major hardware changes in the last two decades.

"The hardware industry has been through three complete revolutions in the form of transistor, solid-state and large-scale integration architectures. But people are programming computers with the same technology they were using 20 years ago," Rather said. "Most of current-day languages are direct descendants of old technology and there is no breakthrough you can see on the horizon. There are very few genuinely new ideas in the entire software industry," she added.

Rather claimed that all the software on today's scene was originally designed to run on mainframes and had been squashed and made to fit into a small systems environment with varying degrees of success. There was a great deal of resistance to the concept that programmers should have to learn something new, although nobody questioned the notion that as hardware revolutions progressed, systems engineers have had to start from scratch again and again.

"Many people believe that new computers have to be made to look like old computers of 20 years ago, and I don't think that is necessary at all. Instead, we should be looking for small software. As users, you should demand that the programming language is small enough to run on the system you are compiling it for," she said.

### Development Problems

Large programs, Rather said, were extremely expensive to develop in terms of time, debugging, maintenance and even, on occasions, cost. In addition, they were insulting to the ability and capabilities of programmers. "Lots of systems are designed from the point of view that most applications programmers do not have an IQ of over 75," she added.

The Forth language expert also poured scorn on the practice of overloading operations. Her overall objection was that the cost of an operator's trying to figure out which operation it was supposed to perform was not worth the effort involved. "I want an operator that can do the job, quickly, efficiently and well," she said.

Addressing the theme of this year's NCC — Keys to Productivity — Deane Blazie of Maryland Computer Services, in Bel Air, Md., said it was necessary to look at language as an all-encompassing programming environment.

"It is a total environment, having all the structured constructs incorporated into languages. In the 1980s we need to go a step further than we have done in the last 10 years and integrate facilities into the language or programming environment."

Blazie said an example of such a feature would be a data base management system built as an integral part of the language.

"If we do this kind of thing, we will see a great increase in productivity. We will end up seeing the difference between interpreters and compilers going away or at least hidden as far as the programmers are concerned," Blazie added.

At the same session, David Robson of Xerox Corp.'s Palo Alto, Calif., research center, described some of the work the company was doing on developing a small systems language called Small Talk.

The language, he said, was oriented

toward objects, classes and messages. So far, the language had only been run on four or five machines, Robson said.

## CW at NCC

He jokingly added: "To date, the smallest thing about the language is its user community."

Nevertheless, the language received a great deal of interest from the audience, with many questions coming from the floor. In response to one of these, Robson said he believed that while the concepts one uses to describe a system should be small, the

facilities to which it allowed access ought to be large. From this point of view, Small Talk aimed at having lots of functionality, including graphics, animation and a library browser. The smallest system would be around half a megabyte.

Robson said that hardware needs to be small because users want to be able to carry systems around with them. But, he added, the quality of smallness did not necessarily apply to software.

"Smallness in the size of the program is not always better. Take, for example, the case of APL, which in one line might be totally incomprehensible to a programmer, while in 10 lines it might begin to make some sense," he said.

# Corporate, Collegiate MIS Reciprocity Urged

By Bruce Hoard  
CW Staff

CHICAGO — Reciprocity between corporate and collegiate MIS departments enhances all parties concerned, according to speakers representing those disciplines at the National Computer Conference session on "Joint Business-University Professional Development and Research Programs."

Robert Bensen, founder and director of the Center for the Study of Data Processing (CSDP) at Washington University described the birth of the CSDP as one of necessity. Because of St. Louis' isolated geographical location, it was necessary for the area to turn inward in search of MIS educational services.

"St. Louis ain't exactly the East Coast

or the West Coast," he commented.

Formed five years ago with the backing of eight corporations in the St.

## CW at NCC

Louis area, the CSDP now enjoys the support of 23 corporations that receive a variety of remunerations for their financial support.

The idea behind CSDP is to bring together members of the corporate community that would otherwise consider themselves competitors instead of compatriots and to provide them with a forum where they can discuss mutual problems and work toward solutions, Bensen said.

One example of services rendered by CSDP is the round table it presents. The corporate affiliates (which sign up for an annual fee) provide the facilities and expertise for presentations on such topics as systems development methodologies or office automation, Bensen said.

One of the institution's biggest problems is its diversity, the founder noted. Another problem is its "insidious growth."

Although it is wonderful to see full classrooms filled with enthusiastic students, it is less wonderful to keep up with the drain on resources that requires, he said.

James C. Wetherbe of the University of Minnesota's MIS Research Center said the objectives of that center have

remained constant since its inception in 1968: the education and development of high-quality MIS practitioners and academics.

Corporate subscribers to the center are required to maintain their corporate headquarters in the Minneapolis-St. Paul area. There are currently 20 of them that pay \$5,000 per annum, Wetherbe said.

The main thrusts of the center are MIS management, systems development, data base and distributed data processing. Research in those areas focuses on case studies, field experiments and specific areas of interest to subscribing companies. "We operate on a quid pro quo basis," Wetherbe said.

Task forces formed by the center bring companies together in the same manner of the CSDP, encouraging them to pursue topics of mutual interest and to write position papers on the results.

Student projects and internships may take the form of four-member groups that provide member companies with free consulting in areas of interest. Once again, the end result is usually position papers, he said.

The center offers training programs for companies outside of the center through its executive development centers. Members, however, receive a 25% discount.

### Focus on Industry

Edwin Kerr, founder and executive vice-president of QED Information Sciences, Inc., approached the education requirements of DP professionals from a nonacademic standpoint.

Decrying the spread of media-based learning, he described his company's Electronic Data Processing Education Program (Edpep). Edpep was designed as a low-cost, dependable education program based on company subscriptions. During its original work with Babson College in 1974, the firm provided the curriculum and the school provided the facilities.

Since then, the company has grown to include six regional programs featuring two sessions annually. Companies subscribe by buying a block of seats that they may utilize in any fashion they desire, Kerr said. That includes the option of taking courses at any of the regional centers.

One advantage of the program is its tendency to make DP managers sit down and make binding decisions on the educational futures of their employees. Another advantage is the advisory councils found in each region, Kerr said.

Members of the advisory councils represent subscribing companies and meet once or twice monthly to discuss their needs. That prompted the executive vice-president to say, "Users have shaped the program for us."

## When you can't get your price lists fast enough—call International Graphics.

International Graphics converts your computer tapes into printed and bound price lists—quickly, professionally and economically.

Join the growing number of companies who keep their price lists, parts lists, catalogs, manuals and other printed materials up-to-date the quick, efficient way through the computerized composition and printing services of International Graphics.

Here's why:

- 1. Speed.** International Graphics saves you time by formatting and typesetting directly from your data base computer tapes! Then we print your material and deliver it. We're also close to you with 5 plants coast to coast.
- 2. Quality.** Phototypeset pages are easier to read than computer printed pages. And International Graphics has the latest state of the art computer driven phototypesetting equipment to give you a wide variety of typestyles and sizes to make your pages look neat and professional. We offer complete design services.
- 3. Security.** Because your work is produced under one roof data remains secure and confidential.
- 4. Economy.** When the job calls for many pages and large quantities, the cost is surprisingly low. We format and print directly from your data. You save both time and money. You'll also save on paper and shipping costs because typeset pages require up to 40% less space than computer printed pages.

For full information on how International Graphics can save you time, money and give your price list a professional look, call 800/328-7172, ext. 1024 or send the coupon below to: Computer Directed Services, International Graphics, 1660 S. Highway 100, Minneapolis, MN 55416.

"Do You Know This Computer Has 17,302 Small Working Parts All Supplied by the Lowest Bidder?"

# Outnumbered Other Foreign Contingents Japanese Focus on Software at NCC This Year

By Tim Scannell  
CW Staff

CHICAGO — Armed with notebooks, cameras and an insatiable curiosity, the Japanese were out in full force at this year's National Computer Conference.

But this year they focused their attention and lenses on software and the U.S. software companies, rather than primarily on the latest hardware and technological developments.

Officials at NCC's International Visitors Center — a friendly, glass-enclosed island set up in the sea of people and machines — believed that the Japanese outnumbered any other foreign contingent here at the conference and exhibition. They were followed closely by visitors from Brazil and England.

More than 500 foreigners had registered with the center just hours after the exhibit floor opened to the public, according to Milton D. Shulman, a professor at nearby DePaul University and one of the center's official "greeters." However, thousands turned up before the show's end last Thursday.

## Interest in Exhibits

The majority of Japanese visitors were interested only in the exhibits showcased on the three football field-sized floors of McCormick Place. Very few were even marginally interested in attending any of the NCC's program sessions, according to Kazuhiro Ishida, a tour director who organized a group of 38 Japanese businesspeople and brought

them to the show. This is the fifth year that Ishida has offered a tour to the NCC through his company, Travel Tokyo, Inc.

Fingering a black briefcase filled with statistics and the itineraries of his 38 charges, Ishida noted that nearly all of them were interested in one thing — software. In fact, half of the executives in the group

were software manufacturers or are involved in some type of software research.

the U.S. in hardware capabilities, Ishida admitted it is painfully behind in software and

men presently have no convenient or global method to keep track of any Japanese technological breakthroughs. Therefore, while productivity is high and the technology comes fast and furious in Japan, there is also a lot of duplication of manufacturing effort.

The Japanese are studying  
(Continued on Page 36)

## CW at NCC

Smiling coyly at references to the highly publicized "Japanese invasion" and claiming that Japan is probably equal to

software development.

As an example of Japan's software inadequacies, Ishida pointed out that his country-

## The new look in low-cost data entry.

It's the brand new HP 2622 block mode terminal from Hewlett-Packard.

With its high-resolution character cells, forms firmware and full display enhancements, the 2622 gives a dazzling screen performance for jobs like data entry and retrieval.

But what makes this terminal look even better is its price—just \$2075.

### Drawing the most from your system.

The HP 2622 display station goes beyond the standard low-cost block mode features. With its format mode and optional line drawing sets, you can design forms just like the ones your people are used to working with. And there are two full pages of scrolling memory to help make everything picture clear.

But the HP 2622 is more than just a flashy screen personality. It has a typewriter-style keyboard with separate numeric keypad for quick and easy data entry; eight user-definable soft keys; self-diagnostics for high reliability; even an optional built-in thermal printer for hard copy at the touch of a key.

See how good your system can look with the HP 2622. For an eye-opening demonstration, call your local HP sales office listed in the White Pages. Or return the coupon to Hewlett-Packard, Attn: Tom Anderson, Dept. 398, 974 East Arques Avenue, Sunnyvale, CA 94086.

# Japanese Expecting to Move Up at NCC

By Bruce Hoard  
CW Staff

CHICAGO — Did Japanese vendors get short shrift when many of them were grouped on the less desirable basement level here at the National Computer Conference? "No way," they said. They were happy to be here. "I think it's just a matter of time," David Larin, sales manager for Hitachi, replied when asked why his company was downstairs instead of up. "We expect to have a better location in the future based on our four years of participation."

Dr. Hidehiko Ishikawa, general manager of the Office Automation Products Department for Konishiroku Photo Ind. Co., Ltd., said space was made available for his firm only after

NCC's sponsor, the American Federation of Information Processing Societies (Afips), decided to open up more display space than was originally

planned.

"We were on the waiting list," he said. "There were about 200 companies on the waiting list, so they

## The Afips Points System

How does the American Federation of Information Processing Societies (Afips) determine booth locations at the National Computer Conference?

Exhibitors are given priority on the basis of a points system, according to an Afips spokeswoman:

- Ten points are given for each year a company has been represented at the show.

- Eight points are awarded for each year a firm has taken part in the Personal

Computing Festival.

- One point is awarded for each 100 sq ft of exhibit space used in exhibit programs.

If a company drops out of NCC for two years or longer, it loses all its points. If it stays away for only one year, its status remains intact.

Space assignments for next year's Houston "Astrohall" show were being made last week.

changed the basic schedule." Because of its preeminence among computer shows, NCC is a must for Japanese vendors who wish to make it in the lucrative U.S. marketplace, he added.

"For survival in Japan, we have to sell our products in the American market," he continued. "If we only compete in Japan, we cannot survive, and we be-

## CW at NCC

lieve these are basic policies of most Japanese companies."

Will Konishiroku be back next year? "We would like," Ishikawa commented.

Fujitsu America is having it both ways with booths on both the upper and lower levels. Charles Palmer, a manager for the Far Eastern firm, sees no conspiracy against the Japanese in booth assignments.

"It's my understanding that in order to get to the prime space, length of service is a requisite, and we are late-comers," he said.

It is very important for Japanese vendors to be represented at NCC, according to Palmer. "With 70,000 people coming through, validity in the marketplace can be established by coming to NCC."

Fujitsu, which applied for booth space around last Christmas, also got off the waiting list and onto the exhibition floor when Afips opened up additional space.

Arthur L. Munzig Jr. was most emphatic in denying the Japanese had been relegated to inferior status on purpose. "It's impossible," the president of Computers International declared. "It's done very openly and everybody knows how."

How important is NCC to companies like ITS Japan, for which his company distributes in the U.S.? "It's quite essential, just as other computer conferences are," Munzig said. "If you could only go to one show a year, it would be NCC."

Companies like ITS Japan would die out if they were locked out of the U.S. computer market, he added.

## Japanese Focus On Software

(Continued from Page 35)

the U.S. patent procedures and tracking methods to overcome this.

The 38 Japanese businesspeople — mainly from the manufacturing arena — signed on for Ishida's NCC scouting trip through the *Daily Industrial News*, a Japanese newspaper that ran several ads to drum up interest in the trip. The group is coordinated by Haruhisa Ishida, an associate professor and head of research and development at the University of Tokyo's computer center.

Besides helping the group separate the software wheat from the chaff at the show, Prof. Ishida also took the group to local universities and companies to examine their computer operations. Back in Japan, each of the 38 businesspeople will deliver a report on various impressions of the U.S. software field.

The group was scheduled to return to Japan late Wednesday.

# Bellisario Urges Imagination, Innovation In Telematics for Business, Society

By Marguerite Zientara  
CW Staff

CHICAGO—The future merging of data processing and telecommunications technologies will be "one of the most important changes in business and society," keynoter Marisa Bellisario said last week.

In effecting that merger, "we must use our imaginations and innovation without being tied to the traditional data processing and telecommunications approaches," she advised an audience of 500 National Computer Conference attendees.

Bellisario, described as "the highest ranking woman line executive in the computer industry worldwide," is co-general manager and member of the management board of Italtel SPA in Milan, Italy.

Following a five-minute welcoming speech by Chicago Mayor Jane M. Byrne, who noted that those not involved in DP are "overwhelmed" by the fast progress and ubiquitousness of the computer industry, Bellisario described the future merging of the DP and communications worlds.

## Office Productivity

Drawing on the European experience in France, the UK, West Germany and Italy, Bellisario cited the increased productivity in the office and noted that "the new technology should be dedicated to increasing the ease with which people do their work and to making their jobs more interesting."

Exploring "The New Field of Telematics" (from the French-coined word "telematique"), Bellisario displayed slides showing that white-collar productivity has lagged behind blue-collar productivity in recent years. "That situation will change sharply in the future; it is a great opportunity for our industry," she observed.

Based on the two-way exchange of information using home or business television sets and pushbutton telephones, development will occur in the areas of data collection and processing, development and generation of images, text development and generation and documentation and storage, she predicted. Languages, data, text and graphics will all be integrated by telecommunications in applications accessible through any of the 500 million telephones installed worldwide, she noted, adding that every phone is "a potential terminal in the home or business for the new world of telematics."

## Business Applications

While explaining that the merger of telecommunications and DP will result in such generally useful applications as telecontrol of energy consumption and police "tele-alarms," Bellisario concentrated on the developing business applications in the field. Citing a projected annual increase of 7.2% between 1980 and 1990 in the world market of office automation, she pointed out that lowering telecommunications costs will result in more efficient telematics technology.

Describing the score of telematics projects now being undertaken in France, England, West Germany and Italy, she stressed the great impact these technologies are having and will

have on society at large. For example, in West Germany teletex is expected to replace telex services in the next few years. "Providing two services with one machine will mean a sharp reduction in the work done in the office."

England's Prestel service, the most

## CW at NCC

advanced of its kind, already allows users to access a number of different services using a television set, in a two-way exchange of information. She cited one successful business user, "related to the stock exchange" in

London.

In discussing the future role of the PABX, Bellisario explained that telecommunications equipment, distributed information processing and telematics will all be connected to PABX systems for the integration of relative services. "We will be able to exchange information among all those services."

In conclusion, Bellisario projected that telematics' growth will probably follow a scenario in which the Japanese develop the most low-cost equipment, Europe contributes the data bases and services provided through its already evident initiative and "the U.S. will probably be the one in the end to standardize all this."

## The ADABAS Answer:

# Give your programmers a 10 to 1 development edge

Right now, you could be developing ten new application systems in the same time it's currently taking to develop just one - without adding to your present DP staff.

All you need is the NATURAL edge.

NATURAL is Software AG's instant online applications language for the ADABAS environment. This revolutionary, easy-to-use system contains all the components you need to build highly sophisticated, yet practical, applications online. This includes data management, programming, fully independent screen mapping, program testing, and compilation.

NATURAL eliminates 90% of the time it now takes to develop new applications or to modify existing programs. This means you get speed that just can't be matched by any other applications system now available.

With NATURAL, programmer productivity and cost-effectiveness increase instantly. And because new application development is so efficient, end-users gain access to crucial information resources faster than ever before.

Used in conjunction with ADABAS — Software AG's award-winning data base management system — NATURAL meets the needs of today's most demanding DP centers. In fact, NATURAL has proven itself so effective that in many installations it has become the primary applications language.

If you'd like to know more about NATURAL, just fill in the coupon, and mail it today. We'll show you how to give your programmers an unbeatable 10 to 1 edge in new applications development, starting right now.

## Registration for Some Took Less Than 10 Minutes

CHICAGO — Would you believe that you could register at the National Computer Conference in less than 10 minutes, even if you had not done one bit of preregistration planning? Well, it happened.

Harry Poole, a Rhode Island computer consultant, hopped bleary-eyed off the Palmer House hotel shuttle bus at 8:40 a.m. last Monday, after first taking a Chicago city bus from his hotel 10 miles from McCormick Place. He had not decided to attend the conference until Sunday night and he was convinced that registration would be a horror.

At the shuttle bus door Harry was met by candy-striped student guides hired by McCormick Place to speed the

registration process. They directed him to "follow the red rug," the rug designated for all those unlucky enough not to have done any preregistration preparation.

Commenting on the quality of the rug, Harry soon realized that he had run out of it. He immediately made a left-face and asked a woman seated at a nearby official-looking table, "Where do I go?" The woman answered, "What are you?"

"I've been asked who I am, but never what I am," Harry noted, but then realized what the woman wanted to know was if he was an exhibitor, member of the press or an attendee. "I'm an attendee," he said. The woman replied, "Then why don't you follow the red rug?" "Because I ran out of rug," he exclaimed. Luckily, at that point Harry noticed he was standing exactly where he was supposed to be.

Filling out the registration form was relatively easy. The only information missing, Harry noticed, was whether to put his first name first or last name first. He was adventurous and did it his way, first name first.

"The lines are short!" Harry exclaimed. They were, in fact, only five or six people deep, which made the process of forking over the \$75 fee a lot more tolerable.

Next stop was a visit to the ACS Registration Control System, which supplies the conference badges. Another student, JoAnn, keyed in Harry's registration information and in seconds had a plastic badge for Harry to pin on.

It was a pretty painless procedure. "I have to give credit to Afips for a good method of registration," Harry noted.

## NCC: A Must For Local Youth

CHICAGO—The IBM, Qantel Corp. and Digital Equipment Corp. exhibits on the floor of the National Computer Conference were of particular interest to Kay Borzoy last week. Sessions on high-level languages and software development are also on his agenda. Why should his interests by any more important than anyone else's? Because Kay is only 12 years old.

With NCC in town, Kay, a sometime user of a DEC CPU at the Ogden School here, felt a visit to the show was a must.

The Chicago schoolboy was a guest at Apple Computer, Inc.'s International Apple Core meeting held here. He had written a letter to Apple's founders, Steve Jobs and Steve Wozniak, and told them of his interest in computers, especially their Apple II.

"I'm very interested in the world of computers and computer technology," he said. "I try to keep up with as many of the publications which cover the field as best I can." Kay's long-term aspiration is to own his own software business, which he is beginning to formulate. He wants to be like his "heroes," Jobs and Wozniak.

When asked if the size and magnitude of NCC left him a little in awe, Kay said, "Not really, I've been to this kind of thing before."

## "Our inventory is our existence. Think we'd trust it to anything less than Scotch® Brand Diskettes?"

**Don Stone, President,  
Mass. Auto Supply Company,  
Inc., Boston, Mass.**

Scotch Diskettes are the diskettes you can depend upon with the information your business depends upon.

Each one is tested and certified error-free before it leaves our factory. Because we know nothing less than perfection is acceptable for your vital business data.

Scotch Diskettes are available in regular or mini sizes, compatible with almost any system.

# Silent partner.

In the business world of today, just about everybody could use a silent partner. After all, they give your operation a real shot in the arm and hardly ever make a sound.

Now Lear Siegler can fill the bill. Because our 310 Ballistic™ Printer is one silent partner that knows when to HUSH up.

The 310 is the quietest dot-matrix printer in its class. In fact, the 310 Ballistic Printer with HUSH checks in at a soothing 56 dBA.

That's quieter than most typewriters. And when you

stop to think of the accumulated noise beating on your eardrums all day, the 310 emerges as a valued colleague indeed.

And what price do you have to pay for such an asset? Only \$2170. (Quantity 1).

As if that weren't enough, the 310 also fea-

tures an expandable print buffer with up to 2048 characters. It gives you complete horizontal and vertical forms control. And it's compatible with all LSI terminals.

Other outstanding features include the 310's printing characteristics. And a 9 high by 7 wide dot-matrix provides true underlining and lower case descenders.

In addition, the sophisticated 310 is multilingual. Because character sets are available in a variety of languages. At 180 cps, the 310 Ballistic Printer with HUSH gives you high throughput. It's rugged and durable but stylish in design and fits right into any office decor.

The 310 Ballistic Printer with HUSH is a real business secret. Why not make one your silent partner today and see what a difference it makes.

## Managers on the Move

**WILLIAM L. SANDERS** has been appointed director of systems for Inland Steel Co. of Chicago. He succeeds G. Nichols Simonds, who recently resigned.

Sanders joined Inland in 1969 as a staff assistant in the systems department and served

as manager of manufacturing systems. Named assistant manager of data processing in 1975, he went on to become manager of systems maintenance in 1978 and manager of manufacturing systems in 1979.

In resulting and concurrent

promotions, Warren J. Harrington has been named manager of corporate systems; John E. Mitchell has been appointed manager of manufacturing systems; and Jerome J. Rudy has become assistant superintendent, operations analysis.

He joined the organization in 1970 as assistant manager of systems development.

Both Barley and Shattuck are recent graduates of Harvard University's Program for Management Development.

**JOHN P. SINGLETON** was recently named executive vice-president in charge of Maryland National Bank's operations and data processing divisions.

Formerly senior vice-president responsible for those areas, Singleton will report to the bank's president and chief executive officer and serve on the bank's management committee as part of his new position. Singleton was appointed senior vice-president at Maryland National Bank in 1976. He previously served as corporate vice-president in charge of the systems and DP division of the Great Western Financial Corp. of Beverly Hills, Calif.

ILMARS RITINS has joined the staff of CDI Corp. in Philadelphia as corporate director of management information systems.

With his extensive background in computer operations and management information systems, Ritins will now head up all corporate information processing functions within CDI and its subsidiaries.

**JAMES A. MAGUIRE** has been promoted to manager, data processing, at Chloride, Inc. in Tampa, Fla.

Maguire joined the Chloride DP staff in May 1980 as operations manager. He has an extensive background in information processing beginning in 1964 when he joined IBM and has held managerial posts in both systems/programming and operations. He received his B.S. degree in economics from Fordham University.

Brian J. Donushi succeeds Maguire as operations manager, data processing. He has served as project manager in the firm's DP department since 1979 and as project leader and senior programmer analyst before that.

Marcie Long has been appointed to the newly created post of manager, systems and programming. She will direct the corporate systems and programming staff and oversee the maintenance of programming standards for the company. Long came to Chloride in 1976 and has served as a project manager, program analyst, senior programmer and project leader.

**CHARLES COUGHLIN** has been promoted to systems development manager in the management information systems department of Kendall Co., a subsidiary of Colgate-Palmolive Co., located in Boston.

Coughlin came to the company in 1969 and has held several positions within the management information systems department since that time. He is now responsible for all systems development, computer programming and systems implementation.

Coughlin holds a bachelor's degree in business administration from Bryant College.

**ROBERT L. BARLEY** and **JAMES A. SHATTUCK** have been appointed assistant vice-presidents for the Missouri Pacific Railroad's information and control systems department, based in St. Louis.

Barley, who had been assistant director of planning and operations since 1978, joined the railroad in 1970 as manager of systems analysis and procedures.

Shattuck had been assistant director of development and implementation since 1978.

### AVOID DOWNTIME!

## WATER ALERT®

FOR COMPUTER AREAS

**Warns you of water leakage in sub-floor wiring areas.**

- Produces a loud, intermittent alarm when activated by presence of water.
- Completely self-contained...no wiring, no connections.
- Early water detection (1/64" water film activates alarm) provides maximum time for corrective action.
- 24 hour per day monitoring.
- Options include remote indicator, remote flashing light, and automatic telephone dialer.

8 Models from \$59 - \$110

## The Disk Controller With More Punch For Users of Perkin-Elmer 32-Bit Minis.

Includes the Perkin-Elmer 7/32, 8/32, 3220 or 3240's. DIVA can give you storage capabilities that will satisfy you on two big counts: price and performance.

COMPARISON:	DIVA Computroller V	Perkin-Elmer Controller
Intelligence:	Yes	No
7 Byte Error Correction:	Both header and data	None
Formatting Speed: (e.g. 300 Mbyte Disc Pack)	8 Minutes	8 Hours
675 Mbyte Disc	Yes	No
Drives:	8/Per	4/Per
Buffering:	Full FIFO	No
Mix/Match Disc Drives:	Yes	No
Data-Lates:	No	Must Start Over
CPU Space:	One B or E Selch	Two I/O's
Construction:	Multiwire	PC

For more information, write or call us.

607 Industrial Way West, Eatontown, New Jersey 07724 Tel: (201) 544-9000

## Perkin-Elmer or Interdata, we can help you store data better and faster.

With one easy piece.

## Forum to Foster DP Literacy

PALO ALTO, Calif. — The American Institutes for Research has started an information forum called Network for Industry, Computers and Education (Nice) to promote communication and computer literacy by creating links between the education community and the computer industry.

Nice publishes a newsletter for its members and plans to sponsor seminars and workshops, and to act as a clearinghouse for materials that can be used to encourage computer literacy in schools.

Those wishing to be added to the Nice mailing list can obtain information from the American Institutes for Research, Box 113, Palo Alto, Calif. 94302.

# BASF Disk Packs help keep 7 UP<sup>®</sup> profits sparkling.

For all internal accounting and payroll management functions, The Seven-Up Company relies on BASF disk packs. One good reason is our tough testing. We have stringent tests to check coating thickness, impact tests to determine headcrash resistance, detergent tests for resistance to wear and temperature variations, and drop tests to make sure nothing goes out of whack during shipment. To make a product worthy of the BASF name, we're a lot tougher on our disk packs than our own tough customers are.

The same tough standards that maintain our disk pack quality also apply to our other media. Whether you order disk packs, floppy disks, tape, mag cards, disk cartridges, or cassettes, BASF delivers the best-performing, longest-lasting product you can buy today.

At BASF, we seek out the tough customers, proven performers like The Seven-Up Company. Our customers rely on us because, after all, who knows more about magnetic media than the people who, back in 1934, invented magnetic tape? If your

application demands a magnetic medium that meets or exceeds the industry's toughest standards, write BASF Systems Corporation, Crosby Drive, Bedford, MA 01730...or call (617) 271-4030 for the name of your nearest supplier.

## BASF

Ask our tough customers.

# BTI Minis Rated Above DEC's, DG's, IBM's

(Continued from Page 1)

and its relatively inexpensive small business computer held second place with a 3.78. BTI was also the only company out of 28 individually listed firms to have absolutely no problems listed in a category focusing on such things as late deliveries, inflated hardware and software costs and system compatibility.

## Extensive Project

In its annual survey, which is the second most extensive project ever undertaken by the research firm, Datapro contacted computer users from its and *Computerworld's* subscriber lists. The company received replies from 2,173 users for a total of 2,804 minicomputer systems. Last year's survey, which generated more of a response, included 2,309 users and 3,437 systems. Also, in that survey a total of 34 vendors were rated, six more than this year's number.

The number of users and systems represented for any one firm ranged from a low of four users and four computers for Modular Computer Systems, Inc. to a high of 835 users and 996 systems for IBM. Systems were rated on a scale of zero to 4 — with 4 being the highest — or assigned percentages indicating how many of the polled users were happy with vendor support, system reliability and other human/machine aspects.

Besides coming in last with an average score of 2.2 in overall user satisfaction, GA — which was represented by

12 users with a total of 13 systems — scored lowest in technical support, a category that includes vendor troubleshooting, education and documentation. In addition, more than half of the polled users reported that GA did not provide all of the promised software and support, and three claimed that it was difficult to keep up with all of the vendor's changes to system hardware and software.

Finally, summing up their frustrations with GA's SPC-16 and 18/30 machines — the two systems spotlighted in the survey — nine out of the 12 users noted they would not recommend their system to other users. This ratio was greater than any other contained in the extensive survey.

About half of the surveyed GA system users were planning to replace their systems sometime this year, preferably with another vendor's machine. None of the dissatisfied users planned to stay in the firm's seemingly troubled hardware or software neighborhood. In addition, although the majority of GA system users claimed their computers lived up to expectations, a larger majority — nine of the users — said they would not recommend the system to other users.

Of the minicomputer heavyweights and those with more than 100 users and systems represented in the survey, Hewlett-Packard Co. gathered the greatest number of user satisfaction points, followed by IBM, DEC and DG. However, 8% of the IBM and 12% of the DG users reported they would not

recommen their systems.

DG users showed the least enthusiasm for the firm's Nova 2 and Nova 800 computers, with about a quarter of the 11 polled users stating that the machines did not do what was expected. The firm's CS 40, 50 and 60 computers fared much better in the survey, although a small portion indicated that software deliveries were late and the CS 60 users noted some problems with the system's vendor-supplied applications programs.

## Series/1 Complaints

Most complaints aimed at IBM minis seemed to center around the Series/1 and the System/38, according to Datapro's figures. About one-fourth of the 27 Series/1 users that responded to Datapro's questions noted the system and its software were delivered behind schedule. In addition, the same number pointed out that the configuration initially proposed by IBM was much too small to handle their requirements. Twelve percent of these users complained that the system did not do what was expected, and nearly 10% said they would not recommend the system to another user.

Although the 26 System/38 users in the survey have had their computers for only nine months or less, six have already complained that IBM did not keep all of its software support promises. A small percentage also stated that deliveries of both the System/38 hardware and software were late.

Despite these isolated problems, only

about 3% of the 835 IBM users reported that their systems did not do what was expected, and a little more than 8% indicated that IBM computers would not be on the tips of their tongues when they whispered recommendations into other users' ears.

The computer systems voted most likely not to be recommended to other users were those from Computer Automation, Inc. Although only six users responded to the survey, two said the system was not all the vendor claimed it was and an equal number admitted that their comments would probably not be used by the firm to sell additional computers. Also, three of the six CA system users in the survey claimed the vendor did not provide all the promised software or support.

While a healthy portion of the more than 2,000 users surveyed by Datapro acknowledged they would be expanding their present hardware, only a small percentage indicated they would add distributed processing capabilities. In fact, a large majority of the users in the survey currently had central processing operations, with only a small chunk running distributed processing sites.

About a third will expand their data communications facilities, while about 12% to 15% will add integrated word processing to their sites. About a quarter of those surveyed said they would be acquiring additional software in 1981, with the sources for this software split almost evenly between the system vendor and outside suppliers.

# OVERKILL?

**Beware wasteful modems.** Modern overkill can waste big money. Yours. It happens, for example, every time someone specifies a \$6000 modem for an application that could be served every bit as efficiently by a \$700 Astrocom short haul. Wherever shorter distances are involved, you can save thousands of dollars at each location by not overbuying (or overleasing) modem capacity. And still have all the modem power you need, with optimal test features designed in. Just remember Astrocom's SH96 (asynchronous) and MOS/2 (synchronous) Limited Distance Modems. And the Astrocom Modem Emulator, which takes the place of two modems in applications 200 feet or shorter. Our band of knowing, happy repeat customers have saved their companies millions with these products since we pioneered their development. Designing out expensive overkill is inherent in our approach to designing solutions.

For more information, write Astrocom Corporation, 120 Plato Boulevard, St. Paul, MN 55107. Or call toll-free 1-800-528-6050, Ext. 1104. (In Minnesota, call 612-227-8651 collect.)

## Introducing a two terminal system. Under twenty.

The customer who's too big to start small, but too small to start big, needs the Texas Instruments DS990 Model 3. At less than \$20,000 (quantity one, U.S. domestic price) it includes two terminals, 2.3M-byte dual diskettes, 96K bytes of memory and a 150 CPS printer.

The Model 3 features COBOL software, upward compatibility with the DS990 line, and expandability

**The  
New DS990 Model 3.  
For the medium-size  
businessman.**

to 4 terminals so it can grow with your customers. Add to that IBM 3780 communications capability and TI's comprehensive service support, and you've got a best-seller. The DS990 Model 3. It's the right size, at the right price. For more information, contact Texas Instruments Incorporated, Box 202146, Dallas, TX 75220. Phone 1/800/257-7850 (N.J., 1/800/322-8650). "DPS 6 is simply too big an idea to be called a minicomputer."

Hank Haugland, Director,  
Small Systems Marketing,  
Honeywell Information Systems

With DPS 6, Honeywell has set a new standard for small business systems.

Small systems that combine power, flexibility, growth potential, and cost effectiveness.

Consider.

The new DPS 6 family includes ten models.

At the low end there are 16-bit systems with power and capability heretofore associated with much larger computers. At the top end there are 32-bit systems that we believe are the most powerful ever announced for business applications. And in between, systems that keep adding incremental value to support different kinds of growth.

All of these systems are compatible.

Programs that run on the smallest 16-bit system also run on the largest 32-bit model. Without modification.

What's more, the larger 16-bit computers can be quickly converted into 32-bit systems when you decide you need them.

DPS 6 is ideally suited to deal with the hard, unpredictable realities of modern business.

---

*"Everything about DPS 6 says: Here are systems built for business."*

---

DPS 6 also includes COBOL, transaction processing, word processing, data entry and communications. A package that experts are calling the best business-oriented software available today. And it should be. Honeywell has been helping business solve tough problems for 25 years.

Over time, we have combined our proven hardware, software, and human expertise into a highly efficient tool: Businessware. It's more than a word. It's a way to pit our vast

resources against the jobs business needs done.

---

*"DPS 6 is designed to meet the business challenges of the 80s head-on."*

---

Naturally, DPS 6 works splendidly in distributed environments, providing data where it's needed to ensure greater productivity right on down the line.

DPS 6 systems are easy to install and maintain. And so simple to expand that unexpected growth won't be a problem.

It all comes down to this.

Why settle for minicomputers when you can have DPS 6?

For more information on our new family of small systems write Honeywell, 200 Smith St. (MS 487), Waltham, Massachusetts 02154.

# QMX MAINFRAME

## Nanodata's soft machine.

It gets more out of your IBM/370 software than IBM hardware can.

Designers call it a "soft machine," this open-ended array of microprogrammed components and specialized buses. Many call it the computer of the future.

Nanodata Computer Corporation is the leader in the design of emulating computers — the standard by which other companies in the industry are measured. With the QMX Mainframe, you can now take advantage of our decade of experience.

The unique QMX frees you from the limitations of conventional mainframes.

and packs more processing power than a comparable IBM 4300. It runs your entire inventory of IBM/370 software more efficiently, with no need for conversion or reprogramming.

Since you're not restricted by your initial mainframe requirements, you can add processing power, memory and channels to handle heavier workloads and new applications — all at a minimum cost — simply by adding or changing modular QMX components.

In essence, you can now have the benefits of conventional mainframe power and capacity with the advantages of modularity of upgrade and on-line flexibility.

To learn more about Nanodata's remarkable soft machine, the QMX Mainframe, call or write:

**“If the data processing system you’re buying today can’t handle office functions, it’s already obsolete.”**

**I**t won't be enough for your next computer to solve today's problems well. It must also be ready to solve tomorrow's.

**Word Processing, Electronic Mail, Voice Communications. You're going to need them all.**

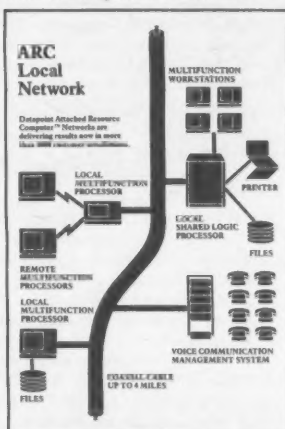

People are multifunctional. But most office machines are not. That's why we developed the first computer that handles *all* the basic business functions — data processing, word processing, electronic message service, and management of voice and data communications.

All functions are truly integrated and available at every workstation. You can enter data...compute and file...retrieve and incorporate in text...transmit to other workstations across the hall or across the nation...and receive confirmations automatically. The result—increased productivity and tighter management control.

This is Datapoint's Integrated Electronic Office, a unified approach to office automation with virtually unlimited growth potential.

**The cornerstone is a local network that's at work now.**

Datapoint introduced local networking over three years ago. Now more business is processed on ARC™ coaxial networks than all other cable systems combined.

ARC networks enable workstations, processors, printers, and files to be linked together so that all resources are available to all users. Shared access brings significant economies while uniting all members of an organization with a high-speed artery for information exchange.

But ARC goes well beyond conventional cable networks. Users

*Vic Poor is Executive Vice President of Research and Development at Datapoint. He pioneered dispersed data processing, designed the first computer-on-a-chip, and developed ARC™—the most widely used coaxial network for linking business machines.*

may access physically distributed files as a common information base containing both words and data. And this information base may be organized to match a company's structure with comprehensive security controls at all levels.

**You decide what to start with, what to add next.**

Start with a single workstation or a small cluster. Order data processing and word processing to begin. Graduate to communications management and electronic mail as you go along. Or vice versa.

A choice of compatible processors and a broad range of peripherals allow you to match capacity precisely to the job.

**Stop replacing hardware. Stop rewriting programs.**

Many computers bog down trying to provide more and more functions to more and more users. This one won't.

**Word processing with new search power.**

Add word processing to existing workstations whenever you're ready. Because WP and DP are truly integrated, you can retrieve information from DP files and incorporate it into WP documents.

And Datapoint word processing offers you a productivity tool no one else can. It's AIM™, Datapoint's Associative Index Method™. It brings automation to the filing cabinet at last.

With AIM you can search files and documents by their content. You don't need to know the document number or title. Search by subject or a remembered phrase. AIM will find every document or data file in which the key words occur.

Electronic message capability allows completed documents to be transmitted to other Datapoint workstations, cutting paper work and speeding communications. You can even use it to send file updates and new application programs to your geographically dispersed processors.

**Cut long distance telephone costs up to 40 percent.**

Your telephone expense may be rivaling your data processing costs. We can help there, too.

The Datapoint Long Distance Control System operates with your existing PBX or CENTREX and automatically routes each long distance call over the least-cost line. It can hold specified calls until a low-cost line becomes available. And it prints out information on phone costs and traffic to let you optimize and control your telephone usage.

**Begin now. We're ready with service  
and support.**

Datapoint systems have been proven in more than 30,000 user locations and are backed nationwide by over 800 customer service engineers.

For more information, send for "The Executive Guide to the Integrated Electronic Office." Write: Datapoint Corporation, Corporate Communications T-41CW, 9725 Datapoint Drive, San Antonio, TX 78284. Or call (512)-699-7059.

*With conventional computers you can only add processing power in large, expensive steps. With ARC, you can add power in small increments, closely matching capacity to user needs.*

## EDITORIAL

### NCC Grows Up

Just like the industry it serves, the National Computer Conference has grown up.

The latest edition of the show, held last week in Chicago, was marked by a quiet, business-like atmosphere. Absent was much of the hoopla and hype that characterized many past shows.

But while the huge exhibit hall reflected the business-like character of the attendees — few exhibitors introduced products, choosing instead to push tried-and-true systems that end users can use immediately — the technical program continued its academic orientation.

Still mired in the early 1960s, when bit fiddlers ruled the roost, the academic program covered topics of interest to only the few members of the academic community. For the practitioner, the person on the line trying to use computers effectively, there was almost nothing.

In the past, NCC served as the rite of spring for the computer community, an "in" group whose members knew each other and were interested in the latest research. But times have changed. The applications explosion of the past few years has made management realize the value and importance of information processing, and concerns have changed from bits and bytes to return on investment.

It was clear last week that the exhibitors had gotten the message. But the dichotomy between the business-like atmosphere on the exhibit floor and the boring academic feel of the technical program highlighted the basic problem with the American Federation of Information Processing Societies (Afpis), which sponsors the annual gathering.

For tax reasons — no other — Afpis tries to perpetuate the myth that NCC is a scientific and educational show, even though it is one of the largest trade shows in the business. Firms do not spend hundreds of thousands of dollars to mount educational exhibits — they come to the show to sell, pure and simple.

If Afpis would admit that fact, it might be able to get away from academic computing and offer the attendees something of real interest in the program. Unfortunately, there doesn't seem to be much hope that will ever happen.

## DATA PAST

### Five Years Ago May 10, 1976

RICHMOND, Va. — The Federal Communications Commission's (FCC) plan to initiate a registration/certification program for use of noncarrier equipment on the telephone network was halted at the last minute by a federal court order. Scheduled to take effect May 1, the FCC program was "stayed and enjoined pending petitions for review" by Judge H.E. Widener Jr., U.S. circuit judge for the Fourth Circuit Court of Appeals here.

WASHINGTON, D.C. — Almost one-fourth of the computer-generated checks sent to recipients of the Social Security Administration's (SSA) newest federal welfare program in the last half of 1975 were wrong, the agency's Quality Assurance Program determined. Statistics for the SSA's two-year-old program for blind, aged and disabled adults showed a 23.7% error rate in pay-

ments made to a sample of the 4.3 million people receiving Supplemental Security Income.

### Ten Years Ago May 12, 1971

SEEKONK, Mass. — The principles of shared software, distributed DP, CATV and computer-assisted instruction would combine to form the "wired city" by 1975, according to industry and user reports from a conference here. Two Sperry Univac experts at a meeting of the Association for Systems Management agreed with a Sanders Associates official on the likelihood of a wired city, but predicted it would not occur until 1980.

WHITE PLAINS, N.Y. — IBM announced the 3270, its lowest priced full alphanumeric CRT terminal system, which offered such options as an improved printer and 1,920-character display. The 3270 displaced the 2260, offering users an upgrade with more features at half the cost.

### Larger Role for APL

I read with enthusiasm the In Depth article by Martin Collins and John MacGregor ["Designing Computer Models that Work," CW, April 20] because it touched on two areas of interest to me: corporate modeling and the APL programming language.

The authors described several modeling system/language combinations, briefly mentioning APL with unfavorable comments. But, we are told, APL is not entirely unacceptable in spite of its problems, and "some financial models have been successfully built using this language."

The primary advantage of a modeling system written in APL is its quick responsiveness to changes in users' needs. The user is, in my experience, not interested in the model except as a tool to process his numerically encoded information. All models will at one time or another require custom modifications.

Since the user will usually not be involved in the coding, shouldn't the time factor be weighted quite heavily in the choice of modeling methodology? Specialists, operational research analysts and, above all, outside consultants don't come cheap, so the less they bill to the user's account the better!

It is true that APL's interpretive nature consumes more overhead than compiled subroutines, but I make the case that total cost, consisting of labor charges as well as computer resources consumed, makes APL a more cost-effective tool. Executives, whose time is not cheap, will surely understand this point of view.

I respectfully submit that APL has a larger role to play in modeling methodology than Collins and MacGregor would allow.

### Situation Too Common

The scenario described in the letter "Another Stumbling Block" [CW, April 20] is, unfortunately, still all too commonplace.

The thought of a programmer working for two hours and sitting idle for six because of poor turnaround brings back fond memories. Some 15 years ago, I had a summer job which, because of a delay in installing local hardware, necessitated 48 hours turnaround. Punched cards were delivered via the morning mail truck to another company site, results (if any) were on the next morning's truck and changes were submitted the following morning.

This procedure called for patience, a different style of programming, a different mental set and a different work load — but it didn't call for idleness.

First, the opportunities for doing multiple projects or, at least, multiple test steps concurrently had to be explored. There was now time to plan, design and execute good documentation. In addition, we had time to read, to learn, to experiment and so on. When I needed better turnaround, I hopped on the mail truck.

Since there are fewer and fewer mail trucks in the system test cycle, hitchhiking is no longer the answer. Recognition of the problem(s), short-term scheduling solutions and longer term system selection and project staffing solutions need to be addressed.

Both improving turnaround and "living" within a given level of turnaround are key management tasks. The more things change, the more they stay the same.

## THE TAYLOR REPORT

Alan Taylor

## Forth Raises Issue Of Programmer Power

The traditional method of buying program transportability in those now nearly universal high-level languages has been by restricting the power of the programmer. This has been done quite consciously, either so that he can simply ignore what the hardware is (using Fortran, Cobol, PL/I), or else to permit computer novices to get production quickly (using APL, Basic, Pascal).

Indeed, the idea that transportability can be obtained without restricting programmer power simply has not been considered for years, so it is not surprising that when a method does arise, it is not recognized.

This has happened with a language I will call "Third." Third is the language that might have come before Chuck Moore used the extended programmer power it gave and went on to invent Forth.

Like any practical programmer, Moore doesn't throw good things away after using them, and so a lot of the inventions he made in quite early applications have become so traditional that people have thought they were intrinsic to the whole Moore concept of programming. Then, while trying to learn the new concept, people also thought that in order to understand it, they had to learn and accept all Moore's techniques first.

That simply is not so. Moore's tech-

niques are those of an experienced master craftsman and were never designed to be used as teaching methods. Teaching Forth in its current form is rather like starting a wood-working class by trying to reproduce Chippendale chairs the way Chippendale himself built them centuries ago! To really understand what woodworking — or a powerful programmer computer language — is about, it is necessary to step back.

### Two Element Types

Looking at Forth now, we can break it up into two groups of elements — some that are really fundamental, and that must have been in my mythical "Third," and some which, no matter how neat and useful, could have been done differently. Even now, a programmer or a teacher of computer languages interested in teaching how to keep high-level advantages without losing programmer power might want to design these elements differently to illustrate elementary programmer power and appropriate applications.

**Transportability.** Transportability is provided for in Forth by permitting a programmer to have new hardware-level interfaces inserted at the user level without changing the application definition, either before an application is on the air or after-

## READER COMMENTARY/John D. Silvia

## Twig on DP Branch May Hold IRM Solution

The comments of Dr. Elizabeth Adams et al [CW, April 13] pointing out the need for an information resource manager (IRM) were well taken, but there is also a need for fewer NMS (narrow-minded suppositions). I question the soundness of a business practice deliberately aimed at ignoring a potential resource.

How can the financial controller make effective decisions regarding the use of money or the plant manager decisions regarding energy resources? Ideally because they are each well versed in the fundamental theory and tools germane to their particular area of expertise. Why then should an organization make the *carte blanche* decision to ignore those people within the organization who are well versed in the fundamentals of computing?

Perhaps, on an individual basis, some will be identified as unsuited to the tasks of executive management, but it strikes me as a dangerous bias to assume that none have the requisite talents.

Unfortunately, this bias does in fact exist, and worse, it exists at the fountainhead of many future executives — the most respected business schools in the country. Perhaps it is time to explore some of the premises upon which this bias is based.

The fundamental premise appear-

ing in public commentary on this issue is that the DP/MIS chief tends to be technically oriented, primarily concerned with efficiency of systems. There is a wealth of historical data supporting this idea. The first generation of computer professionals grew out of engineering and science and began applying their talents in the business arena. Most were still technically oriented and the above premise is reasonably valid.

However, the next generation, guided by a few from the first, began to develop a branch to the parent tree of computer science — the distinct discipline of data processing. To the rest of the world, this distinction appears invisible, yet to ignore it would be analogous to ignoring the distinction between communications engineers and marketing staffs using the medium of television.

Computer scientists are the tool makers of the profession. DPers, on the other hand, make use of those tools within a specific context. DPers' considerable knowledge about their tools is no more a handicap than is an advertising executive's knowledge of the fundamental characteristics of the medium of television. Each does and should know the limits of the technology he is using.

A second, widely held premise is (Continued on Page 62)

## READER COMMENTARY/J. Harris

## Business vs. Political Managers

Recent articles have pointed to the weaknesses of the technical manager. The technical manager poses a minor problem to business, but it is only the tip of the iceberg, because technical managers do not last very long. Technical managers leave management quickly because they cannot cope in a business environment, or they become "political" managers.

Political managers are the real threat to business, but they are difficult to identify because there is no such thing as a 100% pure political manager. Every political manager must have some business sense, and all business managers must have political awareness to survive the challenges of management.

When we look for the characteristics of a political manager, a clearly defined profile develops:

1. **Politics**
  - Has highly developed debating skills.
  - Strives for power.
  - Uses subordinates in political situations.
  - Takes credit for group or individual innovation.
  - Recognizes accomplishments by group.
  - Eliminates or controls support groups.
2. **Personnel management**
  - Controls all delegated work.
  - Evaluates on reputation and sub-

jectivity.

- Promotes workers based on performance, time, visibility and allegiance.

- Makes upward pressure by creating top-heavy organizations.

3. **Planning**
  - Avoids measurable planning.

4. **Controls**

- Avoids controls.

5. **Economic measurements**

- Builds defense by blaming others.
- The political manager may not know he is a political manager. He may be highly intelligent, capable and successful, but he can destroy a company.

### Typical Case

Let us examine the creation and progression of a typical political manager in a programming environment.

Joe graduated from a good university computer science course and worked for a number of programming contractors prior to being hired by a large programming firm. His first assignment in his new job was to design and code a complex data base system. He was an outstanding programmer, and after three years became not only the recognized expert on data bases, but also the project leader on two other major applications.

Joe's manager had a winner. Joe

handled all the technical aspects of the business, while the manager handled the financial, project control and personnel work. Joe and his manager were highly respected by the company executives.

It didn't surprise anyone when Joe, with his manager's assistance, was named manager of a newly formed development group. Joe received a good deal of management cooperation in his new job and was permitted to choose the people he wanted. Since he was an outstanding programmer, he selected the best available team for the assigned project. It just happened that the group was 75% senior professionals. Joe did not realize that salary affected costs.

As a "technical" manager, Joe directed all design and implementation aspects of his project. When problems were encountered, he worked around the clock discovering the source and coding solutions.

The system was completed and installed ahead of schedule. The customer made a personal visit to the director of development to applaud Joe's work. Joe became a successful technical manager.

### Success Slipping

His second project did not go as well. The customer constantly added new requirements which were accepted because they would improve

the system and Joe wanted to do a good job. The project started to slip its schedule, but no one noticed.

One month before product ship, Joe realized he was in trouble. When he informed his manager (who wasn't doing his job) of the situation, the coverup began.

Needless to say, Joe and his manager were able to contain the situation by shifting expenses, adding more people and working with the customer. The product overran the estimate by 30%, it was two months late for installation and it required more than the normal number of post-installation fixes, but Joe made it through the ordeal. What's more, he learned a lot from the experience — everything, in fact, except how to manage a business.

Joe became a "political" manager. He had learned how to build a defense and shift expenses.

### Primary Goal: Survival

He would never again rely on planning groups. From that point on, Joe insisted on planning and staffing his own projects. He would also incorporate many contingencies in his plans. His survival became his primary goal.

As a political manager, Joe excelled. He was very expensive, but he always finished ahead of schedule. He

(Continued on Page 60)

## Fourth Solution

Alan Taylor's article "Cobol-81: Search for a Solution" [CW, April 6] mentioned only three ways to solve the problem of the ALTER verb:

1. Permit the use of ALTER only when patching already-working programs.
2. Harass users of ALTER with warning message printouts.
3. Provide a separate compiler for ALTER-containing programs.

There is a fourth solution which should be considered: remove ALTER statements from Cobol source code automatically. A simple program can be written to replace ALTER verbs with MOVE verbs and insert matching IF and GOTO statements in the referenced paragraphs. Here is an example of how the proposed program would work:

```

INPUT:
WORKING-STORAGE SECTION.
PROCEDURE DIVISION.
A100-BEGIN-PROCESS.
GO TO A200-CONTINUE-PROCESS.
A200-CONTINUE-PROCESS.
ALTER A100-BEGIN-PROCESS
TO PROCEED TO A300-END-PROCESS.
GO TO A100-BEGIN-PROCESS.
A300-END-PROCESS.
GOBACK.

OUTPUT:
WORKING-STORAGE SECTION.
01 CONTROL-TABLE.
05 CONTROL-SWITCH-1 PIC X VALUE
SPACE.
PROCEDURE DIVISION.
A100-BEGIN-PROCESS.
IF CONTROL-SWITCH-1 = 'A'
GO TO A300-END-PROCESS.
GO TO A200-CONTINUE-PROCESS.
A200-CONTINUE-PROCESS.
MOVE 'A' TO CONTROL-SWITCH-1.
  
```

## LETTERS

GO TO A100-BEGIN-PROCESS.  
A300-END-PROCESS.  
GOBACK.

My guess is that the program has already been written, or at least planned by some installations. But I doubt whether the Travelers Insurance Companies assumed its use when they estimated their Cobol-81 conversion costs at \$20 million.

## Changes at Burroughs

As editor of *BWI Monthly*, a publication for Burroughs users throughout the world, I am very interested in the plans of the new Burroughs Corp. chairman. I have begun to see a defi-

nite change in philosophy between the current chief executive, Michael Blumenthal, and his predecessors, Ray MacDonald and Paul Mirabito. I believe this current transition, especially Blumenthal's change of perspective in management theory, is necessary to help chart a successful corporate path for Burroughs in the '80s.

Undeniably, Blumenthal's discussion on strategic planning, delegation of authority, cash management and implementation of an organizational system appropriate for a firm the size of Burroughs is not the same dialogue we used to hear from the chairman of Burroughs. Nor did there used to be much talk of the operational problems such as weakness in customer service and support, the "faulty distribution system," inappropriate personnel policies and a lack of coordination between marketing and manufacturing.

These problems were previously left in the background, not to be discussed and dealt with. Instead, we

Two Styles  
For Managers

(Continued from Page 59)

had much more spare time than ever before, so he began to make "contacts." He got the opportunity to place one of his "loyal" senior analysts on the director's staff. His job became even better.

Joe was promoted to manager of projects and immediately interviewed the project managers assigned to him. Joe had his first surprise. Two of the managers were business managers and their presentations were completely foreign to him. Luckily the other two had backgrounds similar to Joe's, and a good deal of time was spent discussing mutual acquaintances.

After a short period of time, it became evident that the two business managers had to be replaced. Joe had no trouble in finding two qualified "technical" managers.

Joe and his four political managers became a dedicated entity. Joe was the leader and everyone under him supported his goals. He was no longer concerned with survival, he would now begin to grow and expand his influence.

As you can see, Joe believes in what he is doing. He no longer feels subservient to the company because he believes he doesn't need the company.

Joe and his staff make impressive presentations. His track histories, shown with color slides, expertly prove the capabilities of his groups. The only thing missing in Joe's presentations is his expense-to-revenue position. Joe's departments lose money, and morale is slipping because the work load is too light. In addition, the programmers are talking about forming a group to promote opportunity and fairness.

The company becomes the ultimate loser, unless a business executive recognizes the political regime and educates the members and/or moves the leaders into nonmanagement positions.

Harris has held three management positions since 1968 and currently manages three professionals and six technicians, including a department manager.

MANAGERS:  
Your DP training is an investment!

Make it a profitable one with the help of Edutronics/McGraw-Hill

Money Spent on Data Processing training is an investment. The expected dividend, of course, is an increase in efficiency and real productivity. So why gamble with your money and your people? Invest in an organization with an international reputation, extensive resources and unlimited growth potential. Invest in Edutronics/McGraw-Hill. We can help make the most of your training investment today as well as tomorrow. Whether it's training in subject areas such as VSE, Structured Program Design, PL/1, VS/1, VSAM or JES3, we've got what you need in a library of video-

tapes designed to be used on your job site. For more information on making the most of your DP training investment, write or call us toll free at 1-800-255-6324. We'll turn your investment into a profit.

were snowballed with the more positive aspects of the corporation, such as Burroughs' dynamic emergence in the data processing industry, its strong and innovative full line of compatible products, its 15% to 20% annual growth plan, the doubling of the company's size every five years, the marketing assault on IBM and so on.

Blumenthal is still saying many of the same good things about Burroughs, but he realizes the internal problems must be confronted and handled openly and honestly. I believe that prior leadership at Burroughs would not have "bitten the bullet" and taken the \$125 million write-off this past December. Nor would former leaders have implemented the new policy of shipping only complete systems to customers at Burroughs' fiscal year end.

Initially, the MacDonald philosophy served Burroughs well and brought the corporation to the forefront as a strong, aggressive "maverick" in hardware design. Progress demands change and the corporation's present problems now need new solutions. It is time to instigate a new corporate philosophy.

MacDonald brought a salesman's attitude to the executive suite at Burroughs. He was interested in measuring success by the attainment of "quotas"! His goal, beginning in the mid-'60s, was to show an annual increase of 15% in Burroughs' revenue and to maintain 20% pretax return on sales and capital.

MacDonald worked more than 40 years at Burroughs, and many believe he was almost single-handedly responsible for putting Burroughs squarely in the mainframe computer business. He probably helped save Burroughs from merger in the early '60s with his emphasis on profit and his idea that for Burroughs to succeed in DP, its products had to be more innovative and easier to use than those of other vendors who made "IBM-like" machines.

Similar to many salesmen, MacDonald liked to talk about the capabilities of Burroughs products. He understood and contributed to the innovative design of Burroughs computers.

However, to be an effective corporate leader, he needed to delegate authority. MacDonald resisted this type of change.

The fact remains that during his reign, Burroughs revenues went from \$489 million in 1966 to \$2.5 billion in 1978. Under MacDonald, Burroughs released systems in the 500, 700, 800 and 900 families. I agree with the writer who indicated that MacDonald was so involved in the product line that Burroughs was "primarily interested in selling machines and not worried about the nonsense of solving all the problems in business."

But, with this phenomenal growth came a flood of new problems such as the inability to keep up with product demand and the lack of sufficient field organization to support the increasing customer base. I believe MacDonald would have been more successful if organizational changes had been made to coincide with Burroughs' growth.

MacDonald's immediate successor, Paul Mirabito, realized the weak link between administration and the users group and began to alter the almost total dependence of Burroughs

on MacDonald.

Mirabito understood a significant change in management was needed for the long-term benefit of Burroughs. Although he was chairman only a short time, he was instrumental in recruiting Blumenthal to Burroughs.

I believe Blumenthal has a clear view of the present needs of Burroughs and Burroughs users and is prepared to guide the corporation under a new philosophy, one that is current with today's trends.

### What Beasts These?

By training we are journalists, so it was an accident of Fate and by force of paycheck that we ended up at this computer company. Because we are in another country, we request some help with the language.

For instance, we are unsure what a superminicomputer is. We can only speculate by means of metaphor. Let's use rodents. A rat is a computer, a mouse is a minicomputer and a superminicomputer is a shrew. Would that be correct?

Then we have personal computers (and, presumably, nonpersonal computers). Here we think of locker rooms. A personal computer is the

bar of soap you bring yourself; a non-personal computer is the sliver of soap (you find on the tile floor) that you pick up, use and drop back on the floor for the next guy to use. Towels, by the way, would also work as metaphors, although somewhat dry ones. Would that be correct?

Finally, we would like *Computerworld* to provide a prediction. Will someone someday invent a superminimicrocomputer, not to be confused with minimicrosupercomputers or microminisupercomputers, or minisupermicrocomputers...? We could go on, but only an engineer would understand. That would be correct.

# Forth Raises Programmer Power Questions

(Continued from Page 59)  
ward. Transportability is essential, and therefore these characteristics would be in Third.

**Memory efficiency.** Memory efficiency is enhanced in Forth partly by encouraging the use of small values.

For a working craftsman like Moore, memory efficiency is as essential as varnishing was to Chippendale's creations. It does have many

ramifications (including the encouragement of integer arithmetic as opposed to the more familiar fixed- and floating-point decimal arithmetics). Any professional who has been convinced of the value of memory efficiency enough to understand integers as a normal way of thinking will be able to handle this. But is it needed to teach or use the basic Third concepts? No — so out it

goes, and let the Third programmer learn to exercise his power to set up and use different types of arithmetic.

**Stacked postfix notation.** Similarly, with the most controversial and unfamiliar item in Forth — its postfix notation. Simply put, in Forth the operators like "rogrammer," ":", ":", ":", ":", and so on get fixed after the number to which they apply. Thus "2, 3, rogrammer" is

the equivalent of "2 rogrammer 3" in prefix notation.

That seems simple. But Forth uses many operators, such as "q" (meaning "Store"), "@" (fetch), "p" (print), "ROT" (rotate the top three elements of a stack) and so on. Then they are stacked on top of each other!

And to gain real structure and compiler efficiency (again what every craftsman wants to do), they can all be

piled on top of each other together with variables, constants and so on in a beautifully, demonstrably accurate, very effective manner, but one that certainly looks ghastly to a novice.

A revolution like Forth has to look to its side effects if it is to flourish. I rather like the concept of increasing programmer power, but see the problems of trying to achieve that by standardizing at an almost unteachable, master-craftsman-like level only.

## 'Twig' May Hold Answer

(Continued from Page 59)  
that computer professionals are interested only in computing, not in the business of the particular firm. There is undeniably more than a grain of truth to this concept. The computer professional's market is a seller's market. Technical talents are easily transported to other firms, and moving to a new firm often yields substantial financial gains to the employee. DP career paths become oriented toward the profession as opposed to the individual enterprise, but this is a generalization.

A few DP professionals are emerging who seek to change that orientation. More will follow if management demonstrates support for meaningful in-house career paths. Rather than arbitrarily setting a limit on the career goals of the employee, management should provide an atmosphere conducive to the assimilation of the DP professional into the mainstream of corporate management.

I don't suggest that a new NMS be introduced — that of restricting IRM manager selection to the ranks of DP professionals. I do suggest, however, that there is a twig developing on the DP branch, and it could help solve the IRM problem.

DP professionals are awakening to the idea that the information needs of the firm are closely tied to corporate goals and objectives. Some are taking steps aimed at gaining the requisite knowledge and skills to bring DP into corporate harmony. The individual firm can choose to capitalize on this twig or it can nip it in the bud.

Silvia is a student in the computer and information science program at Dartmouth College in Hanover, N.H.

## It's like multiplying your CICS programming staff by ten.

TRANS IV lets you increase programming productivity ten times or more — without adding CICS programmers. This solution-oriented application development system performs CICS/VS functions automatically.

With it, programmers can write on-line application programs interactively, without referring to CICS macros or internals.

**Features For Productivity.** With TRANS IV, you can define files and display formats in real time — also procedures unique to your applications (like edit and range checks).

TRANS IV gives you on-line error correction and test/debug capabilities — without cards, batch processing, or programming.

TRANS IV operates under all releases of CICS/VS.

With our Informatics classes and learning aids, programmers are fully productive with TRANS IV within a week.

**The Problem Solver.** If you've got a scarcity of CICS expertise and a growing demand for on-line applications, find out the details of TRANS IV.

It's an impressive system that can help you go a long way toward maximizing your CICS investment. In a very short time.

TRANS IV is one more way Implementation Systems from Informatics help you manage human energy problems.

## 'Netman' Provides Multivendor Sites With Net Control

LOS ANGELES — A network configuration management system for data centers was announced here by California Software, Inc.

The Netman system, as it is called, is designed to assist management in the control of multivendor networks. It maintains inventories of all hardware and software in the corporate DP environment, including configuration, budget and problem information, the vendor said.

The on-line portion of Netman, which is operational under TSO or CICS/VS, reportedly provides data access and updates. The batch reporting portion of Netman is said to allow for budgeting, configuration, contract administration, order processing and product tracking details. A generalized report writer interface also is included.

Netman maintains four multiply-indexed Vsam files for component configuration, problem logs, system configuration and operations management logs. Components are related to their associated elements through multiple hierarchical structures and each subsystem can report

## Boole & Babbage Adds CICS Tool, Enhances 'CMF'

SUNNYVALE, Calif. — Boole & Babbage, Inc. introduced an on-line, real-time performance management tool for use in IBM CICS environments and also announced that Release 1.4.0 of its Comprehensive Management Facility (CMF) package is now available.

Resolve/CICS enables end users to diagnose and solve problems with CICS (versions 1.4 and 1.5), the vendor said. It reportedly runs from its own address space, and therefore is not affected if CICS goes down. The product is designed to monitor CICS activity and make changes, as necessary, in CICS parameters.

Major features of Release 1.4.0 of CMF are a Shift command, Information Performance Specifications (IPS) graphics display, and a trace facility. The Shift com-

## Purchased Report Writer Aids In-House Design

RICHMOND, Va. — Buying applications packages isn't always the right answer for information systems requirements, as two Virginia-based managers discovered. But even though both supervisors opted for developing project control systems in-house, they used Dylakor's DYL-260 report writer package to generate reports at their respective installations.

Phillip Mason from Garfinckle, Brooks Brothers, Miller and Rhoades, a network of retail chain stores, and Sarah Jaite with Fidelity Bankers Life Insurance Co. were searching for project control packages as an alternative to manual recordkeeping.

When Mason began looking for software that would be right for the retail store network, he realized that he did not know exactly what he wanted from the proposed system. In 1979, he decided to go with an in-house system rather than make a financial commitment to a package that might not meet his needs.

Jaite, on the other hand, "shopped extensively for a vendor project control package" with clearly defined requirements in mind. The project manager in charge of systems design and development could not find a package that suited Fidelity without "overkill" — more feedback than the insurance company needed. Via the DP grapevine, she heard about Mason's experience, consulted with him and made the same decision for her own installation.

### Immediate Need

At Garfinckle's, the need for increased communication on project progress was immediate, Mason recalled. "It was not uncommon for programmers to be assigned to three projects simultaneously." The needs of separate project managers were sometimes in conflict and the result was confusion in priorities and no sense of progress for the programmers who were caught in the middle. "We needed a way to keep score," he said.

The first step in setting up the scoreboard was to create a file containing the various projects, their planned timeframes and the number of hours being charged to each of them. Then, he used DYL-260 to format reports based on this information.

An entire project control system evolved from this first step, he said. "We built a

file and put in the plans per person per activity for an entire year," Mason said. From this base, he collected the hours worked on a given project and compared them to the total working hours available for that person, building in compensation factors for projected sick leave, vacations, holidays and "unproductive hours."

This information is compared to project plans and weekly and monthly summaries that are issued for top management, he said, with project managers receiving more highly detailed reports.

It took "just over a week of coding time" to develop the entire system, he claimed.

"This is the first time we have had something that is maintainable," he said. "We have reports that allow us to sit down and review everything. We can see where we are falling behind and can easily find out why."

Communication gaps have closed since programmers can see their own output, he said. If a project falls behind, for example, and a report shows that a programmer was allotted 10 hours to complete a 30-hour task, confusion is eliminated. A discussion

## BBN Integrates Edit Capabilities In 'Infomail'

CAMBRIDGE, Mass. — BBN Information Management Corp. has announced integrated document capabilities for its Infomail electronic mail system, an Infomail software package for IBM computers running under the VM/CMS operating system and a turnkey Infomail system based on BBN's C/70 minicomputer.

The enhanced editing capabilities include a display editor integrated into Infomail and access to the external editors present on the various computer systems on which the software operates.

The display editor reportedly is integrated with the Infomail document structure. It is possible to move between document fields and to create, delete and rename fields, the vendor said.

Infomail is fully integrated with

SOFTWARE & SERVICES

for Shared TAPE and DISK Mounts

Transparently Manages Shared TAPE and DISK Mounts

- MSM automatically controls TAPE ALLOCATIONS among your systems. MSM also works for SHARED MOUNTABLE DISKS.
- Allows more EFFICIENT TAPE DRIVE UTILIZATION. Your tape drives will be treated as a single combined pool, rather than several smaller ones. This will have a tendency to reduce overall tape drive requirements.
- Alleviates confusing operator burdens. Without MSM, operators must manually coordinate device usage among the various systems.
- ELIMINATES COSTLY JOB RE-RUNS due to inadvertent multi-system tape allocations.
- Provides a SINGLE-SYSTEM IMAGE with respect to device allocations.
- MSM is COMPLETELY COMPATIBLE with the standard operating system allocation philosophy. MSM simply extends it to cover all systems in your complex.
- MSM is the ONLY TRANSPARENT APPROACH to handling SHARED TAPE and SHARED DISK allocation.
- MSM now runs with MVS, SVS, MVT, VSI and MFT.
- New SOFTSWAP feature allows MSM to reduce the scope of allocation "blockage" when a DOR tape SWAP occurs.
- MSM can be installed in 10 MINUTES — NO IPL is required.
- Requires NO SYSTEM MODIFICATION whatsoever.
- Additional overhead caused by MSM is INSIGNIFICANT.
- MSM is now being used in well over 100 installations throughout the world.

Prevent "Wild Cards" in Your Data With....

Shared DASD Users:  
Consider - SUPER-MSI...

- PROTECTS YOUR DATA INTEGRITY by preventing simultaneous destructive updates by jobs in different systems.
- Eliminates RESERVE Lock-outs (both performance Lock-Outs and "deadly embrace").
- DOES NOT SACRIFICE RELIABILITY as do other approaches to the problem.
- Now has extended VSAM Dataset integrity to specifically handle the internal VSAM Dataset SHR options.
- Informs Operators and/or TSO users (as appropriate) about the precise task (job, TSO user, etc.) causing dataset conflicts.
- Provides powerful operator commands to Control and Monitor performance and activity.
- Is TRANSPARENT to users, and almost transparent to operators.
- Is independent of system environment — for example, it works equally well with MVS, MVS-SE, SVS, MVT, VSI, MFT, HASP, ASP, REXX, REXX, etc.
- Can be installed in 10 minutes without an IPL and with NO SYSTEM CHANGES whatsoever.
- MSI is already being used in well over 400 installations throughout the world.

ALLEN SERVICES CORPORATION

GCD™  
Global Console Director

The Global Console Director is an extremely flexible tool. It allows (selected) message streams from different systems to be logically "blended" to create a unified system image to whatever degree desired. In a slightly different vein, GCD allows any console on any system to be logically attached concurrently (and perhaps in different ways) to any set of systems in your complex!

GCD allows commands entered from any console to be directed and processed anywhere in the complex; in this respect, all consoles are effectively linked to all systems. In almost every aspect, GCD is philosophically and operationally compatible with the standard system console support.

GCD can improve overall throughput by simplifying operations. By allowing several physical consoles to be logically merged, excess devices can be eliminated for immediate savings, or deployed elsewhere to strategic advantage.

GCD is absolutely transparent to your users, and aside from major simplifications, nearly transparent to operations.

ALLEN SERVICES CORPORATION

## Panvalet Compatible With IBM's SPF

OAK BROOK, Ill. — Pansophic Systems, Inc. announced here that its source library management and control system, Panvalet, is compatible with IBM's new System Productivity Facility (SPF).

Designed as an extension to IBM's system, the SPF Option for Panvalet reportedly follows SPF conventions. A series of menus geared toward Panvalet provides access to the Panvalet library, the vendor said.

Pansophic will continue to support IBM's Structured Programming Facility as well as SPF. The SPF Option for Panvalet is available for \$8,000, from Pansophic, 709 Enterprise Drive, Oak Brook, Ill. 60521.

## 'DYL-260' Aids In-House Design

(Continued from Page 63)  
with the programmer combined with a look at the system report indicates where adjustments can be made to keep projects moving ahead. Upper management communication has also been facilitated, according to Mason, since regular progress reports make it easier to work within existing manpower constraints.

Jaite was in the enviable position of being "somewhat

ahead of the game" when she anticipated the need for reliable project information at Fidelity Bankers.

Where Mason's group was eager for a reporting system, Jaite's people were just beginning to sense the need for some formal project reporting, she said. The project manager felt that suddenly introducing a project control system would interrupt installation work flow and be met with staff resistance. But

she was unable to find any package that would ease the staff into accepting the project control concept.

Thus, she began with a DYL-260-generated report specifically designed to educate the staff about the benefits of project control. She keyed-in staff reports showing tasks in progress and completed. When this report was printed, staff members saw their progress displayed just as they had recorded it. The result was an eagerness on the part of the programmers "to see what else the system could offer," she said.

Further reporting showed each project by number, planned start date, planned hours, completion date, sub-tasks contained within it, hours recorded against it and which person was assigned to it.

The next step involved sorting this file by programmer name with DYL-Sort, an embedded option of DYL-260. Other reports included a list of completed projects, a list of open projects and a list of unassigned projects.

Developing the system required "some fairly heavy coding." But Jaite noted that coding is always necessary to feed information into any system, regardless of whether it is a purchased package or an in-house creation.

Future plans at Fidelity Bankers include a report showing task interdependency that will serve as a planning chart, she said.

## 50 sophisticated on-line applications developed in just nine months.

The Construction Machinery Division of Clark Equipment Company has used Series 80 MANTIS, the most advanced application development system, to put productivity where it really counts—at the bottom line.

"In our first four years of on-line processing we built only 150 applications. But, more and more, our ability to build new on-line applications to meet increasing demand was diminished by the never-ending requirement to maintain existing systems.

"After installing Series 80 MANTIS, our ability to build applications increased 180%, resulting in 50 new applications in nine short months. Today, we're not only keeping pace with demand, but seeking new cost saving on-line applications to build for the future. For any corporation, this is where data processing can improve productivity."

Series 80 MANTIS is Cincom's dramatic breakthrough in application development technology. Only MANTIS provides complete beginning-to-end on-line application development, without the need for batch processes.

For many companies like Clark Equipment, application backlogs are becoming a thing of the past. Programmer morale is up. End-users are happier. And most important, data processing productivity is helping the corporation where it counts most—at the bottom line.

MANTIS is an integral component of Cincom's Series 80 family of data base/data communications products. To see how MANTIS can help improve your productivity, contact our Marketing Services Dept. for a demonstration. At your site or at a Cincom Service Center.

## We Are Proud to Introduce CIS, The Bank Information System of the Future

Leading consultants have stated that it is an absolute must that any bank considering an online customer information file use a database management system in support of all processing.

Cullinane Database Systems, Inc., now offers the Customer Information System (CIS), the state-of-the-art bank information system based on IDMS, Cullinane's award-winning database management system. As a result, for the first time, information about all the relationships the bank has with its customers will be available to the *management and marketing* functions of the bank. The use of a sophisticated database management system makes it possible to cross-reference customers with

accounts and make this information available to the appropriate users quickly and easily.

With CIS, senior management of the bank will now have the information available that they must have to manage the bank and to build a more profitable business. CIS provides more sophisticated analysis to management, thus enhancing the marketing of profitable services to valued customers of the bank.

In addition, CIS is a system designed to be used with existing major banking applications, including demand deposit accounts, savings accounts, certificates of deposit, installment loans, MasterCard, VISA, and your particular bank debit card (ATM). The unique

design of CIS provides built-in multibank/multibranch support, allowing direct access to the database by branch, affiliate, and correspondent banks.

Free seminars have been scheduled throughout the United States to introduce this new major advancement for banking management. These seminars will be of particular benefit to senior banking personnel in marketing, operations and data processing.

## People Are 46% of Your DP Dollar

Improve Their Productivity With ASPRIS From ASI

While the industry in general has focused on improving performance through the use of hardware and software monitors and other aids, ASI has been concerned exclusively with the productivity of the most significant element of your DP dollar—People. For more than 12 years ASI has provided cost effective training delivery systems to improve people productivity.

These delivery systems now include Video Assisted Instruction, Productivity Skills Development and Live Education Delivery. With the introduction of two entirely new products for 1981, CAI and ASPRIS, ASI has harnessed technology to provide the first comprehensive integrated training system to address today's requirements. It is based upon a systematic *train/test/retrain* approach to increasing individual productivity.

This systematic approach to training is consistent with developing and managing any successful project. In order for the project to be completed on time and within budget, a controlled "closed loop" system must be in place. ASI's products have been designed to make this possible.

### ASPRIS™ (Advanced Systems' Planning, Reporting Information System)

Developing curricula tuned to the application project can insure that a shortfall does not exist between the project tasks required to do a job and the availability of people skills. By providing a tool for the all important analysis and design of project oriented training plans and by automating the time consuming administrative activities, the training functions' contribution to the overall data processing effort can be significantly enhanced. By matching tasks to available skills, you can be sure that personnel resources will not be a constraint on producing projects on time and within budget. In order to facilitate this approach, ASI is offering the first preprogrammed, fully interactive training management system, ASPRIS.

ASPRIS is the first data base management system specifically designed to assist in managing the training function. Composed of seven subsystems, ASPRIS addresses the key issues in training management. It is a turnkey system, fully operational upon delivery and requires no in-house technical resources.

### CAI (Computer Assisted Instruction)

CAI (Computer Assisted Instruction) can make a unique contribution to productivity in training. It has the ability to perform the placement function so that redundant training is eliminated and the potential amount of time spent in training is reduced. CAI can significantly reduce on-the-job errors by simulating the actual work environment to insure that the student can perform back on the job. And, additionally CAI provides the control you want by thoroughly testing the student so that when they are released from training you know they have acquired the needed skills.

Today only ASI can deliver the complete CAI training program for interactive placement, simulation and testing.

### VAI (Video Assisted Instruction)

With over 3,000 titles in its Library, ASI provides you with the largest, most comprehensive multi-media training resource available. Over the past 12 months, ASI has added some 250 additional titles in such vital areas as DOS/VSE, CICS, Corporate DP Strategies, Structured Cobol (exclusively developed by Daniel McCracken), data base, IMS/DL/1, microcomputers, distributed processing and data communications. The unique instructional design methodology used in all of ASI's multi-media courses matches the appropriate training medium to the subject. This design methodology delivers specific job related skills through effective interplay of video, audio and text.

### LED (Live Education Delivery)

Finding the appropriate training staff who are technically competent and instructionally experienced for classroom training is a continuing problem. In many instances the need is periodic and the resources are unavailable or too costly for permanent hire. ASI through its LED can provide your organization with a full range of services; stand-up training, group facilitating, as well as customization of courses, to meet your unique requirements.

### PSD (Productivity Skills Development)

On-line data entry requires a continuing commitment to training especially in the distributed environment which involves greater numbers of people who regularly input and

retrieve data. Training, therefore must include not only your full time data entry staff but other terminal users who require basic keyboard skills training, as well as techniques to improve the speed and accuracy of data entry.

Productivity Skills Library courses include training in such areas as data entry training, 3275/3277 and 3276/3278 function key training, 3760 operator training, word processing, secretarial skills, bank proof operation, bank teller skills, and more.

### ASI is Announcing A New Concept—The Training Unit

The Training Unit permits you to identify your training requirements in a standard unit of measure.

This standard unit of measure can be used to acquire any of ASI's products and services. With the Training Unit contract you can draw upon ASI's products and services in any mix you wish. You are neither confined to a single training medium nor restricted to

pre-determined amounts of a given medium. With this unique Training Unit Agreement you can satisfy the full range of your training needs and eliminate time consuming and costly searches for alternate training resources. The Training Unit puts you in control of your training dollar.

## 'BIO' Measures Performance

OAKTON, Va. — The Blocksize Investigator and Optimizer (BIO), an IBM System Management Facilities (SMF)-based performance tool, was developed by Tagg Associates here.

The system reportedly shows data center users how to correctly block data sets to minimize I/O time and disk space requirements, and tells data center managers which users need the most help.

The system produces management summary level and data set detail level reports. The latter calculate each data set's usage at current block size, usage at an optimized block size (half- or full-track) and show the I/O time, disk space and Execute Channel Program (EXCP) differentials as gains to be realized, the vendor said.

The management summary reports accumulate old and new usage figures at the account code level, show which accounts can get the most gains and provide "least files to most gain bias" figures for each account as an effort/payback motivational factor.

BIO is available for \$1,950 from Tagg Associates at 11400 Lakin Place, Oakton, Va. 22124.

## 'Marian' Out In Updated Form

MEMPHIS — Release 3.4 of Marian, an on-line librarian, has been introduced by Computer Software Unlimited, Inc.

Enhancements include an on-line interactive programming system which runs on IBM 360, 370 and 4300 hardware under any teleprocessing monitor. This reportedly enables diagnostic messages and source statements to be displayed ready for correction with a command from the CRT.

Additional enhancements include the ability to display two programs simultaneously, full screen updating and other methods of transferring tested source code to new modules.

Marian's "Positive Protection" feature has been expanded. Full compilation history, as well as every library change, is now remembered by the system, the vendor said.

Release 3.4 of Marian, which was designed to run with any teleprocessing monitor and spooler combination, costs \$6,000 and is available on a 30-day free trial basis, the vendor said from 1806 Malabar Drive, Memphis, Tenn. 38138.

## DSSD Program Now Available

TOPEKA, Kan. — Ken Orr and Associates, Inc. is offering a Data Structured Systems Development (DSSD) methodology.

The program consists of consulting services, video training materials, books, forms templates and an automated design tool called Structures.

The cost of the methodology begins at \$675, the vendor said from 715 E. Eighth, Topeka, Kan. 66607.

# Univac Adds Enhancements to V77

IRVINE, Calif. — Sperry Univac has added transaction processing, data communications and language processor capabilities to its line of V77 general-purpose minicomputers.

The software offerings are aimed primarily at communications-oriented and distributed data processing environments, the vendor said. They reportedly operate as communications nodes and support a variety of network protocols and disciplines in use with Univac or IBM hosts or with public data networks.

The Pronto Monitor offers a modular interface to any of the V77 line protocol handlers. It performs as a "user application" which provides access to a data base from any terminal locations, according to the ven-

dor.

The resource management executive (RMX) is a modularized central communications manager for the Vortex II operating system.

In conjunction with the Vortex telecommunications access method, RMX controls the transfer of messages between terminals, hosts or applications.

### Net Interface

Univac data communications architecture is said to provide an interface to many distributed data networks.

New and enhanced line protocol handlers, along with terminal and remote job entry (RJE) emulators, have been added to support V77. Used in a mixed data communica-

tions environment, these packages are said to provide Univac users with IBM coexistence via 3270 or 2780/3780.

### Cobol 74-800

Cobol 74-800 also was introduced with a firmware accelerator package that reportedly offers improved performance over its predecessor, Cobol 4R2.

The Pronto Monitor can be purchased for \$1,250. The RMX package costs \$2,500.

Purchase prices for the protocol handlers and RJE emulators range from \$1,000 to \$1,200.

Cobol 74-800 is available for \$9,000. Sperry Univac is located at 2722 Michelson Drive, Irvine, Calif. 92713.

## Give us your batch programmers and we'll give you a t.p. team in one week.

And that's just one way CPG...The Language solves the current problems of programming in a teleprocessing environment.

CPG...The Language™ is not a mere programmer productivity aid, not a simple collection of sub-routines, and not just a way to automate a few of the more standard t.p. functions. CPG is instead, a short, complete, thorough language specifically designed for highly productive development of on-line applications. And it is truly a major breakthrough in the industry.

CPG...The Language™ is so easy to learn that anyone with a basic understanding of programming can do it in one to three days. And in a week of practical experience, even batch programmers can be fully competent at producing efficient t.p. programs.

That's because with CPG, programmers no longer have to address the entire concept of teleprocessing. They simply write CPG programs which automatically translate into fully re-entrant, multi-tasking, multi-threading programs. And CPG handles all the t.p. activities...even the more specialized ones like buffering, file handling, screen mapping and storage optimization.

With CPG...The Language™ your programmers no longer have to be t.p. specialists, so you have a wider choice of programmers from which to select your t.p. staff. And with CPG, it's no longer necessary to retain separate t.p. and batch programming teams.

CPG...The Language™ frees your experienced programmers for other valuable functions like systems analysis and design...areas where his high degree of expertise can be better utilized and more valuable to the company.

CPG...The Language™ lets programmers develop, test and implement on-line systems in less than half the time of conventional languages, using only a fraction of your hardware resources. And by making hardware more efficient and humans more productive, you can make data processing more responsive to the company it serves.

CPG...The Language™ is the language for the most productive implementation of on-line systems. If CPG isn't spoken in your shop, give us a call or write us. We'll be glad to teach you The Language.

# Honeywell Manufacturing System Fits DPS 6

WALTHAM, Mass. — Honeywell, Inc. has introduced a modular on-line manufacturing management system that runs on its DPS 6 and Level 6 line of minicomputers.

Called the Honeywell Manufacturing System (HMS/6), the transaction-oriented system retains the functions of the existing HMS that runs on the company's DPS 8 and Level 66 large-scale minicomputers, according to the vendor. HMS/6 is a manufacturing system that inte-

grates both inventory and production control into a single data base. It operates on the DPS 6/54, under Mod 600 of the Gcos 6 operating system.

The on-line system operates on an exception basis through which only the data affected by a change is processed. In a manufacturing environment, HMS/6 accepts externally generated customer requirements, develops a master production schedule and resource plan and schedules

necessary material supply.

Through system-initiated feedback documents, it also schedules and monitors production resources and inventory status. On inquiry it provides a variety of engineering, manufacturing, purchasing and accounting reports.

HMS/6 includes six modules that can be installed separately. The modules are inventory record management, manufacturing data control, material requirements planning, capacity requirements planning, mas-

ter production scheduling and statistical forecasting.

The HMS/6 applications software will be available for general distribution beginning in the fourth quarter, the vendor said. Initial license fee for the six modules is \$40,000.

The annual license fee is set at \$10,650. For each subsequent set of the application software package, the initial license fee is \$8,000 and the annual license fee is \$2,130, from the vendor at 200 Smith St., Waltham, Mass. 02154.

## Editing Added to 'Infomail'

(Continued from Page 63)

VM/CMS, BBN said, running as an applications program in a separate virtual machine for each user. Terminal support is available for both IBM 3270 devices and asynchronous Ascii terminals.

It offers interchange with other programs and data on VM/CMS, the vendor said. The process interface permits other applications programs to call or be called by Infomail. The import and export commands in Infomail provide two-way data exchange with other VM files.

Infomail users can edit messages using IBM's Xedit display editor, in addition to using Infomail's own screen editor. Infomail under VM/CMS occupies several hundred thousand bytes of virtual storage, BBN said, and can be installed on any IBM 360, 370, 4300, 30 series computers or other plug-compatible mainframes.

Infomail operates as an application

program under Western Electric Co.'s Unix operating system on BBN's C/70 minicomputer. Terminal support is provided for a wide range of asynchronous Ascii terminals, the vendor said.

The expanded editing capabilities for Infomail are available to current users at no additional cost. Prices for Infomail under VM/CMS range from \$50,000 for the IBM 4331 to \$70,000 for the IBM 3033. Installations are scheduled to begin in July.

A typical large turnkey C/70 Infomail configuration, with one million words of memory, two 160M-byte disks, a tape drive and a line printer supporting 64 terminals sells for \$195,000. Smaller configurations, with fewer peripherals, sell for prices less than \$150,000. Installations are scheduled to begin in August.

BBN is located at 10 Moulton St., Cambridge, Mass. 02238.

## CICS Performance Aid Out

(Continued from Page 63)

mand enables the user to select data by user-defined time shifts.

The IPS graphics display reportedly allows users to select different IPS members, which they have established, and to generate a graphics representation of the performance objective slopes. This allows the systems programmer to see the proposed IPS members before implementation.

The trace facility provides users with trace capabilities, as well as sample user exits, macro support and a trace format program.

Additional features of Resolve/CICS include information and action services that supply data on the system level, the transaction level and the program and file level. Terminal status information is also displayed.

System-level information furnishes the end user with an overview of CICS historic performance or performance data specific to an established time frame to facilitate system tuning, the vendor said.

Transaction-level information reportedly is helpful in identifying bottlenecks affecting CICS response time. File-level information was designed to help the end user locate I/O problems.

The action services offered by Resolve/CICS are said to parallel the capability of the CICS master terminal operator (MTO). Even if CICS MTO is locked out, Resolve/CICS action services allow users to display and

change information such as maximum task size by system or class, the vendor said.

Additional features of Release 1.4.0 of CMF are a work load activity report that measures average elapsed time of ended transactions; an enhanced modify command; a feature which permits users to continue data collection for the extractor summary report, but to suppress generating the report in hard copy; and an expanded collection phase log.

A new release of total system analyzer (TSA), 3.2.0, a productivity tool that provides data on excessive CPU usage by applications programs and system modules, is now available, compatible with CMF 1.4.0, the vendor said.

Boole & Babbage is offering Resolve/CICS for \$4,500 for the first CPU and \$1,500 for each additional CPU, starting May 1. For a limited time, purchasers of Release 1 will receive Release 2, which will be available in the third quarter of this year, at no additional charge, the vendor said.

CMF Release 1.4.0 is an enhancement that will be added to all CMF installations at no charge to the user, Boole & Babbage said. Cost for new CMF installations is \$9,000 for one CPU, \$16,000 for two CPUs and \$21,000 for three or more CPUs. This cost includes one year of maintenance. Boole & Babbage is located at 510 Oakmead Parkway, Sunnyvale, Calif. 94086.

# INFORMATION ENGINEERING

By Clive Finkelstein

## Part 1: The Evolution of Information Engineering Methodologies

This is the first of six articles on information engineering, a planning methodology for developing corporate data models. It is intended for users and management with no computer experience. Information engineering provides formal DP methodologies for data analysis, data base design and synthesis of program specifications.

The articles cover the following topics: (1) information engineering methodologies, (2) developing a corporate data model, (3) information analysis, (4) data analysis and data base design, (5) procedure formation and (6) information engineering development.

Application development and maintenance techniques are now the major inhibitors to effective use of new hardware technology. Satisfaction of user demands for new computer applications is strangled by an environment where application programs are individually designed and laboriously hand-coded.

Just as the automobile industry encountered maintenance problems because of the quality of early motor cars' design and documentation, we suffer maintenance problems resulting from inadequate application system design and documentation. Software technology has not yet moved from the horse-and-buggy stage into the era of the Model T — let alone into the space-age technology of to-

day's hardware capability.

Application programming is one of the most labor-intensive jobs. To help address the problem, this article introduces information engineering, an integrated set of analysis and design methodologies that can significantly reduce today's application development and maintenance bottleneck.

### Application Development Systems

The 1970s saw the emergence of application development systems, which enabled analysts and programmers to develop application systems more productively. These application development systems utilized the computer to generate program instructions for certain types of programming problems directly from the specifications of systems analysts. They include IBM's Automated Design Facility (ADF) and Development Management System (DMS).

The use of application generators resulted in a dramatic improvement in application development and maintenance productivity. However, they were products designed primarily for use by computer personnel. The end user was unable to use them directly. The DP department had to solve problems and translate them into computer programs.

The '70s also saw the emergence of end-user languages. Typically these

were high-level languages that resembled English. They enabled end users, after initial training, to express their requirements directly in a language more familiar to them than those used by the application development systems. Such end-user languages include IBM's Generalized Information System (GIS), Microdata Corp.'s English and Software AG's Natural.

The close of the decade saw the packaging of more sophisticated end-user languages, such as IBM's Query by Example (QBE) and Relational Software, Inc.'s SQL (Sequel), based on its Oracle relational data base management system (DBMS). SQL was developed as part of IBM's System R relational data base research project. Its use as a high-level end-user language was endorsed by IBM this February, with the announcement of SQL/DS — IBM's first relational data base product for DOS/VSE.

These end-user languages permitted easier development of ad hoc programs to satisfy specific information requests. Their prime objective was easy extraction of required information; the formal report or display presentation of that information was a lesser objective.

The requirement for programs to be used regularly for production of for-

(Continued on In Depth/2)

## IN DEPTH

(Continued from In Depth/1)

mally printed reports was addressed by-report program generators. These were primarily designed for use by computer personnel and provided sophisticated facilities for extraction, manipulation and formal report preparation of required data. The most widely used are IBM's Report Program Generator (RPG), Pansophic, Inc.'s Easytrieve and Informatics, Inc.'s Mark IV.

These developments were directed to improving programming productivity, but did not address the problems of analysis and design. They considered the specific extraction of information from existing computer files or data bases to satisfy a particular application need. But in many instances the required data was not already available in the computer or was organized in such a way that extraction into the required form was extremely difficult. All these end-user or report languages depend on valid structuring of the correct data on which management queries are to be performed.

### The Data Model

It was realized that if these new application languages were to be used

effectively, the data held in computer files or data bases needed to "model" the organization. But to develop such data models, a detailed understanding of the organization was needed.

Information engineering enables user department personnel and management to express their understanding of the organization and its data and present that understanding in a data model. Information engineering methods enable DP personnel to translate these data models into computer files or data bases that mirror the organization.

The information engineering methodologies extend from analysis and design of day-to-day operational applications to information systems that address the information needs of senior management.

### A Partnership

Information engineering brings the end user, management and DP personnel together in a partnership that calls on the unique skills and experience of each. That experience can then be communicated in a form understandable by all. Each person is able to provide essential input.

Information engineering provides

techniques for extraction of required information from the data model, using application development techniques that draw primarily on the experience of end users and management. Inadequate (and even incorrect) interpretation by DP analysts of user and management information needs is no longer a problem.

The communication barriers begin to fall away.

The problem of developing programs based solely on procedures (which often originated to satisfy the organization's needs of the past) can be overcome. Such procedures may not be appropriate for the future. They may change with new management or may be affected by changing corporate management objectives. In the past, such change has often brought about chaotic change in the application programs and systems that were based on an assumption that procedures would rarely change.

Information engineering identifies and models the data that is the organization. And that data generally changes less frequently than the procedures that utilize the data. The organization's data awareness is interpreted not by DP analysts, but

mainly by users and management, for they have a much greater understanding of its importance and use.

Information engineering also holds out the promise of being able to automate much of the translation from end-user and management experience into effective information systems that directly address that experience and information need.

We have convinced ourselves that what we are doing with the computer has never been done before. We are producing a "brave new world." We are taking new paths and accept that along the way we will inevitably make some mistakes.

But DP is not new. What is new is that we have now, in the computer, a more powerful tool than mankind has ever had before.

Used correctly, the computer represents an extension of man's mind that frees him from his limitations in that it is able to process the masses of data that inundate him. The computer can act as a multiplier of man's creative and reasoning abilities — for man can learn from experience in a way that perhaps the computer will never be able to emulate.

But used incorrectly, the computer could cause problems on a scale nev-

# PROBLEM:

You can't afford transmittal errors in vital data, such as payroll, accounting, and engineering. But the cost of leased lines with protocol is prohibitive. How can you beat the system?

## IN DEPTH

er before imagined.

Computers carry out unerringly the instructions of man. And it is human to err. If our instructions are faulty, those faulty instructions will be carried out at a speed and in a way never before experienced. The potential for disaster is immense.

The computer application systems we use today consume enormous amounts of time and money in their construction. But once built, our complex application development techniques defy easy change or error correction. We have already experienced the horrifying possibility of a nuclear holocaust through computer failure. Such incidents command headlines, but fortunately are rare.

But what do not command headlines are the many computer disasters that have occurred. These are not disasters of the magnitude of nuclear warfare. They are disasters in the organization's ability to respond to changing economic or competitive environments. Many computer systems developed to enable organizations to be more responsive were based upon automation of existing organizational procedures. The erroneous assumption was made that those procedures would not change,

that they would be appropriate for the future as well as the present.

Once developed, our procedural computer application systems are often too expensive to change easily to respond to a different external environment. We are locked in a thickening morass of computer application development and maintenance complexity — a morass that is turning into concrete.

Our error is in assuming that each new computer advance represents a completely new environment — an environment where we are unable to learn from the past and where we are pioneering. And we hope that the errors we make along the way will not be too serious.

One of the most significant advances has been the development of data base technology. Correctly applied, data base offers the organization enormous potential for management control. But if it is used merely as a sophisticated access method, it brings with it inflexibility ... and eventual disaster.

#### Significance of Data Base

The application of data base techniques brings about a fundamental change in the use of DP. Data base

enables data used throughout the organization to be grouped together so that it is available to all users of that data. That data may exist in several unrelated versions throughout the organization today. Each version is owned and manipulated by a separate functional area.

Data base enables these different versions of the same data to be consolidated, stored only once in the data base and yet made available to

all functional areas that need it.

To permit this consolidation, the effective use of data base demands an organizational understanding of the meaning and use of the different functional versions of data. Organizations have grown, and the data resource has dissipated across many functional areas. In an attempt to maintain up-to-date versions of this dissipated data, changes in one data

# SOLUTION:

Call us. We're Prentice, the people with local data distribution solutions.

And with our new UniMux or MiniMux and our 212A modem, you'll be able to use low-cost dial lines with SDLC protocols for error-free transmission at the lowest possible cost.

We're the only people that can deliver the full solution. And these products, like all others in our full line of modems, line drivers and multiplexers, are available for

immediate delivery.

Developing better solutions, delivering them faster—it's a part of why Prentice is fast

becoming a leading supplier of local data distribution systems for the world's leading companies.

To cut your costs of transmitting error-free data, or to solve any local data distribution problem, just call your local Prentice representative or contact us at 266 Caspian Drive, Sunnyvale, CA 94086. Phone (408) 734-9810.

## PRENTICE

Local Data Distribution Solutions, Worldwide.

# Don't let TSO buying a

## VAM/SPF will get more out of the computer you already have

VAM/SPF is the software breakthrough that speeds system response and cuts TSO overhead by actually correcting IBM's timesharing architecture.

VAM/SPF's bottom-line payoff is the time and money you save by keeping your present system. You also reap the continuing benefits of a more cost-efficient and responsive data center.

### Increased application programmer productivity

SPF is the most easily understood and widely used interactive programming tool available today. However,

the high TSO overhead associated with SPF diminishes its benefits. Running SPF under VAM frees systems resources, provides faster terminal response time, and translates directly into getting more work done.

### More resources for systems programming

Not only do your applications programmers take up less of the system, but VAM/SPF gives the systems programmers more of TSO when they need it.

### Better overall system response

Now that TSO no longer takes up a disproportionate share of the computer, all your on-line and batch jobs can run faster. Because up to 35 SPF users fit into a single VAM address space, you'll have a lot more TSO resources ready to respond without usurping the rest of the system.

### VAM/SPF is the architectural solution

IBM designed SPF to run under TSO, which gives equal attention to both trivial edit-and-submit tasks as

# crowd you into bigger CPU

well as to more resource-hungry work. This makes TSO a real resource eater and slows response time for every user of the system.

Boole & Babbage has taken this IBM architecture and turned it into the ideal timesharing system with the classic foreground/background approach. We simply took SPF functions out of TSO and put them under their own communication monitor,

**THE ARCHITECTURAL SOLUTION**

VAM (VTAM Application Monitor). By forcing the edit-and-submit work to be done under VAM as a classic foreground activity, VAM provides SPF users

with truly interactive response time. Background activities such as compiles and on-line testing remain under TSO.

#### **Install VAM/SPF today, start running it tomorrow**

VAM requires no programmer re-training because, unlike other programmer productivity tools, there is no other language involved. In fact, VAM is transparent to the SPF user. And VAM is installed using standard SMP procedures.

#### **Get the full story from a VAM/SPF user**

VAM is producing bottom-line savings today at data centers across North America. Contact Boole & Babbage for more information and a copy of the Performance Comparison of VAM/SPF vs. TSO/SPF. Just call 800-538-1893 TOLL FREE (in California call 408-735-9550), or write Boole & Babbage, 510 Oakmead Parkway, Sunnyvale, Ca. 94086.

## IN DEPTH

(Continued from In Depth/3)

version have had to be communicated (generally by paper) to other functional areas that need to be aware of that change.

The complexity of data base and its demand for computer understanding have seen the establishment of the data base administrator (DBA) position. It has fallen to the DBA to identify and consolidate the redundant versions of data throughout the organization. Once identified, data is

structured by the DBA for implementation and management using DBMS software products.

DBMS products of themselves are unable to identify redundant data. Of themselves, they are unable to bring order into the real-life data chaos.

The task has fallen to the DBA to determine which data is significant to different functional areas and to identify and consolidate data in order to reduce data conflicts. Once identified, DBMS products can pro-

vide necessary data management that will bring order from chaos. In this way, data base brings about a fundamental change in the organization.

Data base will eventually change the way the organization is managed.

The organization that can be managed effectively is able to work with one set of books, has mainly one copy of data — secure and auditable, but accessible to all authorized users — and can consolidate all of these

different uses of data. The information is accurate, up to date and available immediately for management decision-making.

But such data consolidation demands a detailed understanding of the organization, its information requirements through all management levels and its direction for the future.

### Abdicated Responsibility

We have placed this responsibility in the hands of the DBA. True, we have not deliberately abdicated management responsibility. But by leaving to the DBA vital decisions that will affect the organization in the future (through the data base designs implemented today), we may have abdicated management responsibility by default.

Management would never allocate the responsibility for financial restructuring and reorganization of an enterprise to anyone other than an experienced senior manager with financial and corporate planning experience. Yet the implications of data base, in time, are just as wide-ranging for the future of the organization.

Correctly used, data base is a powerful tool that can bring together the many parts of an organization for proper management control. Incorrectly applied, data base offers an opportunity for organizational disaster on a much larger scale than ever possible before.

We must involve the end users and management, who have the necessary organizational understanding, in the development of data models that mirror the organization. This can be achieved through the use of information engineering. Only then can we implement data models physically (using either data base or conventional files) without inviting disaster.

### Birth of Information Engineering

Information engineering grew out of the early stirrings of data base in the mid-70s. With the many DBMS products on the market at that time, the evaluation and selection of an appropriate DBMS to meet the needs of an organization was a formidable task.

Given various organizational needs, this evaluation considered the technical characteristics of the DBMS products available, the data base architecture utilized, the characteristics and constraints of each DBMS.

*The reports  
concerning the demise  
of the System/3  
have been greatly  
exaggerated.*

Contrary to popular IBM belief, the System/3 is alive and doing very well for itself at Sorbus.

However, we can sympathize with IBM's position. They're into newer things and they'd like you to be, too. But if you're satisfied with your System/3, don't switch. Call the Sorbus Service Division of MAI to keep your system on the go.

Service is all we do at Sorbus, and we do it faster, just as well, and for about 20% less than IBM charges.

We assume full maintenance and service responsibility for your

System/3. We're forever keeping an eye on things. Foreseeing and forestalling breakdowns. Making sure little problems don't become big problems.

Sorbus Service® is 1,000 people strong, nationwide, including regional and field specialists who know your System/3's needs and operations. We're ready to move out with the parts and the smarts to keep you up and operating.

Discover what thousands of System/3 owners already know: There is, indeed, life after IBM.

Only then could the most suitable product to address those needs be selected. But this evaluation and selection again and again was found to be ineffective, because it assumed the DP department understood what it required of data base.

It assumed that the organization was aware of the many redundant data subsets that had come into existence over the years. It assumed the future requirements and direction of the organization were established. And it assumed that this direction and data awareness were adequately communicated to the technical personnel charged with the responsibility of selecting an appropriate DBMS product.

The futility in evaluating and selecting data base products without this fundamental organizational understanding was eventually recognized. But the technical complexity of data base and the communication barriers between DP personnel and management appeared insurmountable.

Information engineering was first developed by Infocom Australia, a DP education and consulting company. It resulted from studies in relational theory, normalization and data analysis methodology. We shall explore these roots in some detail.

#### Data Analysis

The significance of this data analysis methodology soon became apparent. The logical data model so produced was independent of any particular DBMS product or data base architecture. The data model could be physically implemented using any of the DBMS products on the market at that time or instead (for organizations not contemplating data base) could be implemented using conventional files. And, because of its basis in relational theory, the data model could be readily implemented using the long-discussed relational data base products.

The data analysis model not only structured data for physical data base implementation in a way that minimized the impact of future change, but it also optimized that data structure so specific DBMS product features could be chosen to ensure optimum data base performance. It identified those computer transactions that were potentially response-critical (in terms of the processing to be carried out and the users' response time expectation). Such response-critical transactions could be used to optimize the physical data base design prior to detailed application development.

Data analysis was implemented with a data base design method. This provided a formal step-by-step approach for translating the logical data model into a physical data base design, using any of the DBMS products available. This data base design method could also be applied to the physical design of conventional file systems — for those organizations

## According to James Martin . . .

"Information engineering needs top management involvement in planning the information resources of a corporation. What we're seeing in many corporations today is the data processing department looking out.

"If information engineering proceeds from the data processing department outward, it is never going to be as good as if you use a methodology which involves top management in making certain statements about types of information which they feel are necessary to run the company.

"What are now coming into existence are methodologies which enable one to look at information resources, translate those resources into data models, get the

data models into a stable form that is independent of technology, translate the data models into today's data bases (which are going to change) and into distributed data bases, to work out the types of distribution you want on networks and then to select the tools which will give you the highest productivity in creating the types of information processing which a corporation needs.

"We start by looking at the information needs, translate the information needs into data base structures, make the data base structures as stable as possible, then use high-level languages — much higher level than Cobol — for generating the processing on top of the data base with maxi-

mum productivity. That's almost exactly the opposite to the traditional way of doing processing.

"Now one can translate that statement into a set of hard design methodologies for accomplishing it. It is that set of hard design methodologies that I think is going to be the mainstay of MIS five years from now. Much of what will be happening at that time will be the central or coordinated planning of the data structures, but those data structures being used in a highly decentralized fashion — by means of networks, distributed processing, minicomputers, small decision support systems as well as large computers."

— James Martin in an interview with *Computerworld*, Sept. 17, 1980.

not contemplating the use of data base at that time, or where distributed minis did not support a DBMS.

Data analysis and data base design enabled the DBA to concentrate on the technical aspects of data base design. They gave the systems analyst tools to develop a logical data model optimized to address the users' information needs and response time expectations. They gave the systems analyst a general appreciation of data base design concepts, so he could then readily communicate with the DBA responsible for subsequent physical implementation.

#### Drawing on Users

However, with experience came true understanding. For in the application of data analysis was found a fundamental requirement for building the logical data model: a detailed understanding of data and its use throughout various functional areas in the organization. *It was not dependent upon a knowledge of computers.* (Once developed, the data model still demanded computer awareness and data base experience for subsequent physical data base implementation.)

Increasingly, it was found that user department management and personnel were being drawn upon to provide that necessary data understanding. And it was found that they were able to learn the data analysis methodology and apply it themselves for developing logical data models. In conjunction with systems analysts, it was possible for business analysts, user personnel and management to apply their fundamental understanding of the organization and its data. The first shot in the information engineering revolution had been fired!

In one example, a large Australian manufacturer trained foremen and clerks from the plant (who had no computer experience) in data analysis. Within nine months, they designed a logical data model that com-

prised more than 500 entities (record types) and almost 4,000 attributes (data elements). This consolidated the data for more than 40 data bases and application systems!

For perhaps the first time, technical

DP personnel and non-DP users and management could work together in the analysis and definition of their requirements for information systems. The communication barriers

### VOTRAX LVM-80

# Talks Business

with voice response systems for:

When your people need telephone access to stored information, the Votrax LVM-80 is the answer. The LVM-80 works with your computer to provide customers, contractors, vendors, or salesmen telephone access to vital business information. Each LVM-80 gives you maximum capacity, feeding as many as 64 telephone lines simultaneously with up to 1000 individually-addressable human voice messages.

Votrax is a leader in voice response systems and provides everything from hardware and modems to software and systems design. You even have the capability of programming your messages in your own voice on a real-time basis. You'll especially like Votrax dependability; no moving parts, all solid-state translates into a highly reliable peripheral. Before you plan your next voice response system, call Votrax and let's talk business.

## IN DEPTH

(Continued from In Depth/7)  
were starting to fall away. The data analysis data model began to be used as a communications standard between DP personnel and non-DP users and management. The data model documented the data required by the particular functional area. The detail of that data was defined concisely, and it was documented and defined in organizational terms understandable to all.

Data analysis provided an extreme-

ly productive technique for analyzing and structuring data identified as significant to specific functional areas. And this presented a problem: *It assumed that the data significant to the area was self-evident.* But data redundancy and organizational complexity, which grow in organizations over the years, defied identification of significant data.

A technique was needed to identify data based upon organizational understanding and direction (before

data analysis). This gave birth to functional analysis, which subsequently evolved into information analysis.

Data base design approached the physical implementation of data from the perspective of the computer. Data analysis addressed data relevant to specific functional areas. What was needed was a technique that could identify the different functional area uses of data and consolidate that data in a corporate data

model — a technique to identify the information needs of all levels of management. The technique had to identify likely information needs for the future, based on the established corporate strategic direction.

Information analysis provided this needed technique. It approached the identification of data from a basis of corporate planning and management theory.

Information analysis proceeds in three main stages. First, an examination of the corporate purpose and mission identifies data fundamental to the organization now and into the future. Second, the data required by specific functional areas is then identified from an examination of the organization's products, services, markets and channels. Finally, the data required for top management decision-making is identified from an examination of corporate objectives.

Subsequent stages then incorporate current data used by relevant functional areas, with quality tests to identify and resolve conflicts between data required in the past and that needed for the future.

The DP department was unfamiliar at first with the areas of corporate and strategic planning. It was outside the department's scope of responsibility. Corporate management in many instances flatly refused to let DP personnel become privy to sensitive corporate strategic directions.

### Not Just DP Tool

And management was right. Information analysis was not just a tool for the DP department. It built upon corporate planning and management theory. It provided a formal methodology that drew upon the corporate directions established by top management to identify data required for effective organizational control.

It clarified the organizational opportunities in a way that had not been done before. The technique could identify reorganization opportunities based upon a consolidation of the data resource throughout the organization. It could be used to direct later, more detailed, information engineering methodologies for detailed design and implementation of responsive decision support systems.

Information analysis was used in a multibillion-dollar government department to achieve "data management control" (and consolidation) of the corporate data resource. And yet another government statutory body used it and "identified tentacles of information throughout the [organization] which we were not aware existed." The group consolidated this in the corporate data model.

Thus the significant breakthrough provided by information analysis was that it was not just user-oriented like some other DP techniques. It forced management to be involved in a straightforward way that used management language and experi-

(Continued on In Depth/13)

## datasouth announces... THE TOTAL PRINTER PACKAGE!

With so many matrix printers on the market today, it may seem tough to find exactly the right one for your application. Some models may offer the speed you need, others the communications flexibility and still others the forms-handling capability. But no printer offers all the features you need...until now.

The DS180 matrix printer provides the total package of performance features and reliability required for applications such as CRT slave copy, remote terminal networks and small to mid-range systems. Not a "hobby-grade" printer, the DS180 is a real work-horse designed to handle your most demanding printer requirements. And pricing on the DS180 is hundreds of dollars below competitive units.

**High Speed Printing** — Bidirectional, logic-seeking printing at 180 cps offers throughput of over 200 lpm on average text. A 9-wire printhead life-tested at 650 million characters generates a 9x7 matrix with true lower case descenders and underlining.

**Non-volatile Format Retention** — a unique programming keypad featuring a non-volatile memory allows the user to configure the DS180 for virtually any application. Top of form, horizontal and vertical tabs, perforation skipover, communications parameters

and many other features may be programmed and stored from the keypad. When your system is powered down, the format is retained in memory. The DS180 even remembers the line where you stopped printing. There is no need to reset the top of form, margins, baud rate, etc....It's all stored in the memory. If you need to reconfigure for another application, simply load a new format into the memory.

**Communications Versatility** — The DS180 offers three interfaces including RS232, current loop and 8-bit parallel. Baud rates from 110-9600 may be selected. A 1K buffer and X-on, X-off handshaking ensure optimum throughput.

**Forms Handling Flexibility** — Adjustable tractors accommodate forms from 3"-15". The adjustable head can print 6-part forms crisply and clearly making the DS180 ideal for printing multipart invoices and shipping documents. Forms can be fed from the front or the bottom.

If you would like more information on how the DS180's low-cost total printer package can fill your application, give us a call at Datasouth. The DS180 is available for 30-day delivery from our sales/service distributors throughout the U.S.

# TERMINALS FOR ALL REASONS.

Dealing with one source for terminals makes sense. So when it comes to the different reasons you buy, it's good to know there's one source you can depend on: Ampex.

## THE DIALOGUE 30. MORE OF WHAT YOU BUY A TERMINAL FOR.

Dollar for dollar, the Ampex Dialogue 30 Series gives you more in a basic terminal.

The Dialogue 30 puts all the basic features into a modern, efficient, well-designed terminal.

Compare our interactive, desk top terminal to any other terminal. You'll find more.

For example, most do not offer a detached keyboard. We do! Most do not offer automatic self test. We do!

And most do not offer a status line. We do with a continuous display of current operating modes, functions, and error/fault conditions. Even a standard printer port!

The Dialogue 30 has friendly user considerations, too. Like matte finish keytops, a non-glare CRT screen, an unobtrusive noise level, and a detached keyboard for improved productivity.

## THE DIALOGUE 80. SOPHISTICATION THAT COSTS YOU LESS.

You'll find everything in our Dialogue 80 Series that is offered in the Dialogue 30 Series. And a great deal more!

Like editing features that insert and delete characters or lines. The list continues with write protect mode utilizing half intensity for protected fields. Combinable video attributes. Twenty truly programmable functions. And block mode with send line and send page capabilities.

The Dialogue 80 Series. More sophistication to improve productivity. For less!

## FROM BASIC TERMINAL REQUIREMENTS TO THE TOUGHEST, THERE'S ONE SOURCE.

Ampex terminals. Whether you use, distribute, or integrate, count on Ampex terminals. You'll get your money's worth in price/performance as well as those features most in demand!

Call Harvey Hirsch today at Ampex Terminal Headquarters. His number is (213) 640-0150. In the Midwest, call Ampex at (312) 593-6000. In the East, call Ampex at (201) 489-7400.

Or write to Dialogue Terminals, Ampex Corporation, Memory Products Division, 200 North Nash Street, El Segundo, CA 90245.

**AMPEX**

# O G U E

## ALL DIALOGUE TERMINALS FEATURE:

**CRT SCREEN**  
12-inch diagonal CRT  
Non-glare screen  
P4 (White) Phosphor  
Green or Amber Phosphor  
CRT (optional)

**DISPLAY MEMORY**  
24 lines by 80 characters  
80 character status line

**CHARACTER SET**  
96-Character ASCII Set  
21 Control Characters  
11 line graphic symbols  
(7 × 10 dot matrix)

**CURSOR**  
Block or underline  
Flashing or non-flashing  
Readable and addressable

**KEYBOARD**  
Typewriter style with  
numeric keypad and func-  
tion control keys. Capaci-  
tive key switches.

**PRINTING FUNCTIONS**  
Buffered print  
Print transparent

**INTERFACES**  
Primary Port  
RS232C asynchronous  
20 MA current loop  
Serial Printer Port  
RS232C asynchronous

**TRANSMISSION RATES**  
Up to 19.2K bps

**POWER REQUIREMENTS**  
Strappable, to handle 100,  
115, 200, 220, 230, or  
240 volts  
50-60 Hz, Single phase,  
75 Watts

**DIALOGUE 30**  
**OPERATING MODES**  
On-Line/Local  
Full Duplex/Half Duplex  
Monitor

**TABBING**  
Columnar

**DIALOGUE 80**  
**OPERATING MODES**  
Block/Conversation  
Full Duplex/Half Duplex  
Protect  
Write protect  
Write Attribute  
Auto-Flip  
Monitor  
Programmable Function Key

**EDITING**  
Insert Character or Line  
Delete Character or Line  
Erase to End of Line  
Erase to End of Page

**TABBING**  
Columnar or field tabs,  
supported by four control  
keys

**DISPLAY ATTRIBUTES**  
Can be assigned to  
characters or fields of  
characters in any  
combination:  
Blanking  
Flashing  
Reverse Video  
Underlining  
Half-Intensity

**OPTIONS**  
An additional two pages of  
display memory  
An additional 2048 bytes of  
programmable function  
key memory

## IN DEPTH

(Continued from In Depth/8)

ence to drive the design. The result of this involvement was the production of system data specifications that could be used directly by DP. These specifications had the advantage of being self-documenting, and interfaced directly with the existing data analysis methodology.

**Data Resource Consolidated**

The information engineering methodologies take a fundamentally different approach to analysis and design. Analysis and design methodologies (such as structured analysis and systems analysis) examine the existing procedures in different functional areas of an organization.

The data used by those procedures is then identified and implemented in data files or data bases. However, the ability to consolidate the many redundant versions of data has eluded systems analysis and structured analysis. Those disciplines often attempt to put together the pieces of a data jigsaw puzzle without any awareness of the overall picture.

Information engineering first identifies the data required by different functional areas, then matches that to data required by corporate management. This provides the overall jigsaw picture. Once identified and consolidated, the various subsets of data utilized by different functional areas can be defined. The processing of that data (either manually or by computer-based systems) can then be examined.

Information engineering provides an initial data-oriented analysis and design approach. It is then followed by a procedure-oriented approach. The steps used in information analysis, for example, allow user management to define its own data model and supporting business procedures, with direct meaningful deliverables progressing to the DP people.

**Senior Management Involvement**

Information analysis provides a tool that enables corporate management to express strategic directions so that the consequences of those directions can be communicated effectively through a corporate data model.

This data model, and its development using information analysis, does not demand that corporate management have prior computer experience. It requires instead that management have a detailed understanding of the organization and its direction based on corporate strategic planning. The model reflects that strategic direction.

The corporate data model is expressed concisely and in terms understandable to management throughout all levels of the organization. It is also understandable to DP personnel. That corporate data model is expressed in the same standard form as produced by data analysis and can be consolidated with data

analysis data models.

The resultant consolidated data model now addresses the data resource throughout the organization. It allows information to be extracted for management decision-making by all levels of management. The data model can then be directly translated by technical data base administration personnel into physical data bases or conventional file systems.

The corporate data directions (previously left to the DBA by default)

are now able to be established by corporate management.

Corporate and middle management are adopting the information analysis methodology to identify (and structure) data essential to the established corporate direction. As information analysis is used, the realization also grows that it is most effective when based upon the output from formal corporate planning. Two significant realizations grew from experience with information

analysis.

In the first instance, information analysis provides a formal methodology for identifying the corporate data resource based upon established corporate strategic statements. However, many organizations have not defined corporate strategic direction in a formal way.

This gave rise to the information engineering corporate planning methodologies of strategic require-

You'll learn what  
**"Life with  
 the Phone  
 Company"**  
 is all about in  
**Computerworld's June 29th  
 Special Report,**

---

**Data Communications Networks.**

---

The fact is, one way or another, all data communication involves a phone company. But not all phone companies involve data communications users in planning future systems, setting rates, etc. The users don't feel in control—and they're not.

Edited by Brad Schultz, **Data Communications Networks** will tell you how to make the most of the phone situation; the key is control through adaptability. Users must assume they'll be surprised by changes and learn to keep their options open. With a mix of tutorial and application stories, you'll read how to:

- ☐ anticipate the user impact of regulatory actions.
- ☐ know when to acquire faster equipment.
- ☐ evaluate alternatives to common carrier services.
- ☐ how phone companies will affect the packet switching arena.
- ☐ find the right help when you need outside consulting.

Know for whom the **Bell** tolls; it tolls for thee. So if you're a user who watches the trends, you'll want to have the most up-to-date information about data communications networks. And if you market data communications products or services—this is a good place to get the word out. Ad closing is June 12th and your **Computerworld** representative can give you all the details. Or, to reserve space, call Frank Collins at (617) 879-0700.

## IN DEPTH

(Continued from In Depth/13)  
ments planning and information requirements planning. These methodologies are based upon corporate planning theory. They establish with corporate management the productivity and profitability potential of various strategic alternatives open to the organization. As a result, not only are the required corporate statements and objectives for information analysis defined, but also functional area priorities are established for ini-

tial implementation.

The second realization gave rise to the information engineering methodologies of procedure formation and program specification synthesis.

The data model produced by data analysis addresses the data resource used by current systems within an organization. The data model produced by information analysis consolidates the data resource throughout various functional areas (and eventually throughout the organiza-

tion) biased toward that data which should be present to support strategic direction and established objectives. This data consolidation often crosses functional or departmental boundaries.

The way in which consolidated data may be utilized (where only one copy of the data may exist) can be quite different from the way in which it is used where redundant versions may have existed throughout the organization. This opens

management opportunities for definition of new procedures. Like the data resource, these new procedures may cross functional or departmental boundaries. The organizational benefits offered can be dramatic and can lead to substantial productivity improvement.

The information engineering method called procedure formation grew out of this realization. This considers that the fundamental purpose of processing (whether manual or automated) is to record data changes in the organization. These data changes (addition, deletion or modification of data) are brought about by various decision events.

Identifying fundamental data changes brought about by significant decision events in different functional areas of the organization, procedure formation combines those events in various ways to produce optimum procedures.

These procedures are assumed to operate against a logical version of the data resource. The organizational and productivity opportunities this opens up can be dramatic. Furthermore, these procedures can be implemented on a manual basis, by computer or both — either distributed or centralized.

In one example of its use, procedure formation enabled a large Australian organization to identify new procedures for decentralized operations control of what had been an "economy-of-scale" batch approach. This was possible because of the data distribution achieved through the use of information analysis.

The consolidation of the corporate data resource by information analysis, and the determination of new procedures through procedure formation, suggest to management possible reorganization opportunities. New organizational structures can be defined, which can derive optimum benefit from access to the consolidated corporate data resource. (The Australian organization mentioned above, for example, subsequently centralized its control procedures from its previous decentralized control structure.)

### Program Specification Synthesis

But the most productive benefit of procedure formation is its extension into program specification synthesis. The identification of decision events which bring about data change — used for procedure formation — presents a completely new approach to the development of program logic. It results in the synthesis of program specifications through a formal method that does not demand extensive programming or analysis experience.

The logic defined by procedure formation can be extended by clerks with no computer experience directly into formal Structured English procedure specifications for translation by coders or programmers into

(Continued on In Depth/18)

## Performance Improvement through Advanced Technical Education

CompEd, a subsidiary of Spindellis & Associates, Inc., is the realization of a progressive approach to technical education. We offer a comprehensive selection of LIVE, high level DP instruction utilizing PROFESSIONAL EDUCATORS & FULLY EQUIPPED facilities. These intensive courses are lecture-based and may include "hands-on" use of in-house computers. All courses are supported by a custom-design mix of collateral material.

### DATA COMMUNICATIONS

#### CICS/VS Macro-level Applications Programming

• Design, code and debug CICS/VS macro-level application programs • Invoke program, file, terminal and data management services • BMS input/output mapping

#### CICS/VS Command-level Applications Programming

• Design, code and debug CICS/VS command-level application programs • Invoke program, file, terminal and data management services • BMS input/output mapping

#### CICS/VS Testing & Debugging

• Use program dump to diagnose abends • Apply Trace, Dump and EDF facilities • Testing techniques for CICS/VS environment • Program testing and debugging workshop

#### CICS/VS System Design

• Design systems that utilize CICS/VS facilities effectively • Use program, file, terminal and data management services • Format screens using BMS and 3270 IDS facilities

### DATA MANAGEMENT

#### VSAM Using Access Method Services (AMS)

• Design and implement VSAM file structures • Use AMS commands to manage VSAM catalogs, data space, datasets • Create and use alternate indexes • VSAM recovery procedures

### DATA BASE TECHNOLOGY

#### IMS/VS Applications Programming DB

• Logical/Physical data base structures • Code DL/I calls to retrieve, update, add or delete segments • Build segment search arguments • Process status codes • Establish data base position

#### IMS/VS Applications Programming DC

• Describe IMS/VS message flow • Code DL/I calls to send and receive single or segmented messages • Design and code conversational programs • Use batch message processing facility

#### IMS/VS On-line Message Formatting (MFS)

• Create and use device formats • Create and use message input/output descriptors • Format screens using MFS and 3270 IDS facilities • Compile MFS source statements

#### IMS/VS Data Base Design

• Design data bases that effectively utilize IMS/VS facilities • Implement secondary indexing and logical relationships • Code and generate DBD's and PSB's • Define data base requirements

### PROGRAM & SYSTEM DEVELOPMENT

#### TSO/SPF Structured Programming Facility

• Use TSO/SPF facilities to compile, execute, test and debug programs • Create, browse, edit and manage datasets • Process jobs in foreground and background modes • Use TSO commands

#### CMS Conversational Monitor System

• Use CMS commands to compile, execute and debug programs • Create/modify datasets via EDIT facility • Transmit and receive spooled datasets • Prepare and run EXEC procedures

### NEW COURSES

#### STRUCTURED Analysis and Design

• Prepare feasibility study and system proposal • Data gathering techniques • Implement top-down design and testing • Use structured walkthroughs

#### ON-LINE Systems Design

• Define on-line system requirements • Develop specifications and controls • Design terminal screens and man-machine dialog • Manage on-line files/data bases • Describe communication network components

**How do you  
explain something  
that's never  
existed before?**

*He had a similar problem.*

# Xerox introduces Star.

It's not just a new machine. It's a totally new concept.

The Xerox 8010 Star Information System is the first office tool (with the possible exception of the pad and pencil) designed specifically for professionals.

You see, people like engineers, analysts, researchers, etc., don't deal just with words or numbers or graphics. They deal with ideas.

The Star System lets them create, revise, and visualize their ideas on a screen, before anything is committed to paper.

And makes it possible for projects that might otherwise take days to be completed in just a few hours. For a fraction of the cost.

## **Here's how it works.**

Say, for example, you're putting together a report or proposal.

With a basic keyboard and four simple commands, Star lets you call up stored information, even from computers. Add to it. Rearrange paragraphs. Choose the style and size of the typeface. Illustrate complex equations. Process records. Create a virtually limitless variety of forms, charts and graphs. And otherwise design a document precisely the way you want it.

Once you're satisfied with what you've created, it can be printed exactly the way it appears on the screen.

## **Your Stars can form a galaxy.**

You can also plug your Star into the Xerox Information Outlet. Then, through a Xerox Ethernet cable, you can share information with other Stars throughout your company, including other offices in other cities. So several professionals

can work together on one page, or on a whole report, without leaving their desks.

In other words, professionals can spend less time running from office to office, doing tedious jobs, or waiting for outside help. And more time doing the productive work there never seems to be enough time to do.

### **"But I can't type."**

Because Star was designed for professionals, it requires no previous experience with keyboards or display screens. What they work with on

the screen are symbols of what they work with every day (such as a file drawer or an in/out box). So most people can become familiar with it in just a few minutes.

For more information, write Xerox Corporation, P.O. Box 470184, Dallas, Texas 75247. Or better yet, ask for a demonstration.

You'll see why Star—just like the wheel—is a lot easier to use than it is to explain.

# XEROX

## IN DEPTH

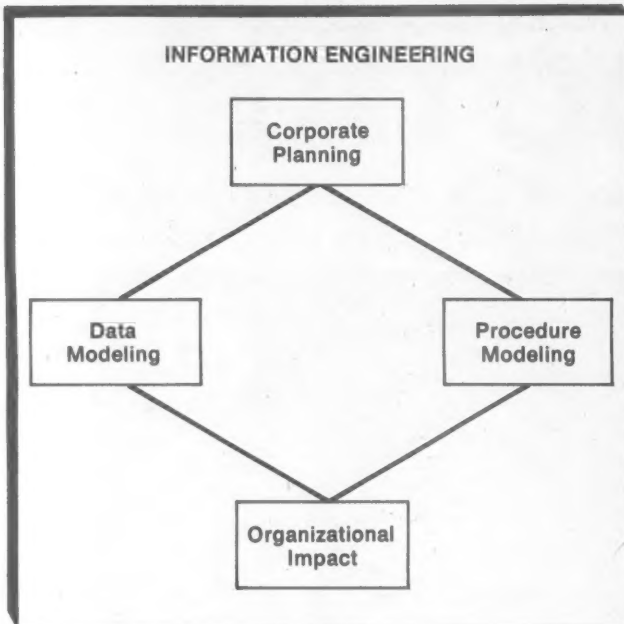

Figure 1

(Continued from In Depth/14)  
appropriate source program statements. Or it can be applied by programmers for direct specification of source program logic from the output of procedure formation.

The result is the synthesis of program logic that automatically exhibits its high functional cohesiveness (the objective of structured design). Dramatic application development and maintenance productivity improvements are possible. It does not yet permit the complete, automated synthesis of programs (hence the name "program specification synthesis"), but is evolving toward that goal. It offers enormous potential for the future.

The previous discussion addressed the evolution of information engineering through research, education and practical application. The remainder of this article places the various methodologies in context and outlines approaches for introduction of information engineering into an organization.

Information engineering comprises an integrated set of methodologies:

- Strategic requirements planning.
- Information requirements planning.
- Information analysis.
- Procedure formation.
- Data analysis.
- Data base design.
- Program specification synthesis.

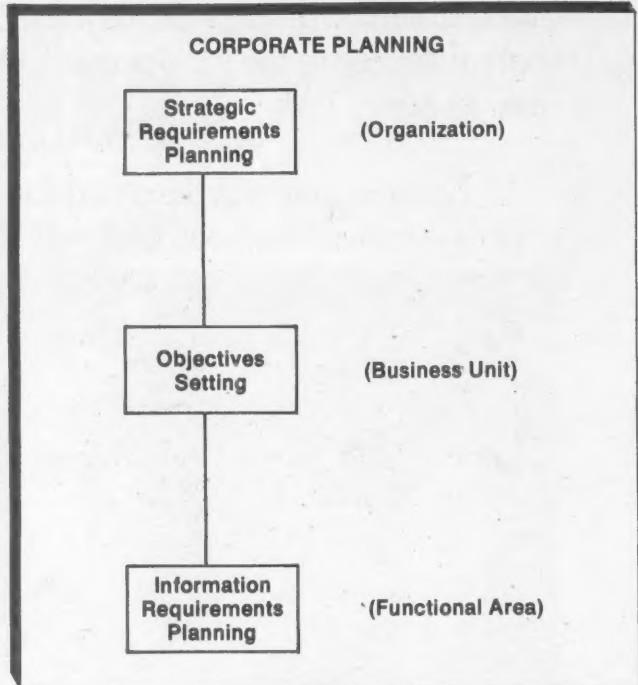

Figure 2

- Security and audit.
- Distributed analysis.
- Information engineering planning and management.

Each of these methodologies was designed to be applied on its own, using as input existing documentation in the functional area being examined. Each methodology draws on the experience of operating department users, together with operating management and top management.

When all techniques are used together directly as part of an integrated set of methodologies, however, the output from one methodology is used directly as part of the input for subsequent methodologies. The end result of information engineering is the design of stable information systems that are better able to accommodate business change with less reprogramming than those produced using traditional or structured techniques or through business systems planning.

Information engineering interfaces with these techniques where they are already in use in an organization. It dramatically improves the quality of systems developed. These information systems may be implemented with conventional files, any of today's DBMS products or the emerging relational data base products. They may use micros, minis or large computers (distributed or centralized) and an appropriate combination of packages, end-user languages or programmed systems — cross-checked against the data models and business procedures determined for the organization.

Figure 1 illustrates the four major

components of information engineering: corporate planning, data modeling, procedure modeling and organizational impact. These components are illustrated in Figures 2 through 4.

### Corporate Planning

Strategic requirements planning establishes with senior management the strategic direction (and objectives) of the organization for the future, based upon effective use of computer-based information systems and on decision support systems.

Information requirements planning helps establish (or review) the corporate strategic statements with top management so that these can subsequently be used as input to information analysis. Measurements of the expectations that might apply to an information analysis project are presented. These suggest the potential impact upon the organization. They outline the potential for reorganization to better achieve corporate strategies and objectives through effective use of information.

### Data Modeling

Information analysis provides a method that can directly involve management and business analysts without DP experience. It enables them to translate their organizational knowledge and information requirements into information systems based directly on corporate objectives and strategies. It identifies the data resource of an organization (or instead a single functional area) based upon the corporate strategic direction established for that organi-

## VAX® & PACS™

...team up to solve your problem of Resource Management and Chargeback.

Signal Technology's Process Accounting and Chargeback System (PACS):

- Satisfies in-house, commercial and government contract audit requirements.
- Reports use of all system resources to help optimize configuration and chargeback rates.
- Reports current charges to users on-line.
- NEW! Software packages and non-standard devices can now be accounted ... plus many other features...

## IN DEPTH

zation or area. The analysis enables an integrated corporate data model to be developed which consolidates data throughout the organization based on its requirements for the future. It provides comprehensive input to data base/file design, procedure modeling and distributed analysis.

**Data analysis** is a method for developing a data model by examining existing systems and data in separate functional areas of the organization. A logical data structure is produced — optimized for response-critical transactions, based on the users' response time constraints. It provides input to conventional file design or data base design and is particularly useful in conversion of current systems to data base technology.

**Data base design** addresses the problems associated with both conventional file design and data base design. The logical model of the required data (produced by information analysis and/or data analysis) is used as input. The method can be applied to conventional file systems, to data base systems that use any of the current DBMS products or to systems that use the emerging relational data base packages.

### Procedure Modeling

Procedure formation provides a method for use by top management and business analysts that enables new procedures (based upon data consolidated from information analysis or data analysis) to be designed. Procedure formation identifies busi-

ness opportunities resulting from use of an integrated corporate data model. It builds those procedures from an examination of events that bring about data change in the data model and identifies the controls that must be observed.

It also leads to development of new procedures for manual systems or to program specification synthesis for computer-based systems. Procedure formation also allows for the data model produced in information analysis to be quality tested as to its ability to support management decisions.

Both procedure formation and information analysis are objectives-driven. They provide powerful techniques that bridge directly from corporate objectives and strategic directions to information systems and decision support systems.

**Program specification synthesis** is a methodology for formal derivation of program logic directly from a data model (produced either by information analysis or by data analysis). It implements (as program specifications) the procedure logic defined by procedure formation. The derived program logic can be expressed either in structured English or directly in structured, source program statements. The resultant programs automatically exhibit high functional cohesiveness — the final objective of structured design.

Procedure modeling (using procedure formation) may interface with structured analysis and, with program specification synthesis, results

## Introducing the most powerful minicomputer ever.

The new Prime 850 is the most powerful mini system ever made for multi-user environments. It sets a new standard of technological leadership for our family of high performance 32-bit systems.

**Multi-streaming.** With the Prime 850, we're introducing multi-stream architecture to our 50 Series family. This means that instead of processing one instruction stream at a time, the Prime 850 processes two streams at once. Parallel streaming for unparalleled efficiency

and throughput. Multi-streaming is a natural extension of our multi-user, software-first design philosophy.

**Ultra-high density memory.** The Prime 850's advanced architecture uses the latest in technology, including ultra-high density MOS memory that stores 64K bits on a single chip, allowing one megabyte to be stored on a single memory board. It has high-performance features like Burst-Mode I/O and Instruction Pre-processing for rapid response to user demands. And it supports

128 interactive user terminals for exceptional cost-effectiveness.

**The most throughput.** The Prime 850 provides more users

with more throughput than you ever thought possible. In fact, it offers more multi-user throughput than any system Prime has ever sold. When you consider our success, that's saying a lot.

**Flexibility plus.** In addition to its power, the Prime 850 has exceptional flexibility. It's right at home in such diverse environments as

energy development and office automation. It saves time and money in all types of general business environments. It offers the perfect combination of hardware and software for technical engineering environments such as product analysis and design.

And it can work on all these applications at the same time. **Totally Prime, totally compatible.** Like all 50 Series systems, the Prime 850 combines power with ease of use. It has 32-bit architecture and virtual memory for

speed, efficiency and economy. It has industry-standard software for convenient program development and data

management. Any Prime system can be networked with any other, so that a system can extend across the office or around the world. And it has PRIMOS<sup>®</sup>, our uniform operating system that supports every Prime system. One operating system means total and absolute compatibility.

#### Meet the head of the family.

In addition to introducing the Prime 850, we've also enhanced the price/performance capabilities of other 50 Series members, including the Prime 250-II and 550-II. To meet the leader, contact the nearest Prime office or write Prime Park, MS 15-60, Natick, Massachusetts 01760. In Europe, write Prime Europe, 6 Lampton Road, Hounslow, Middlesex, TW31JL, England. Tel: 01-570-8555.

Computer

## IN DEPTH

(Continued from In Depth/19)  
in the formal development of structured code. It presents a formal, repeatable alternative to the intuition and experience essential to structured design.

### Implementation Alternatives

Within organizational impact (Figure 1) are a number of methodologies that reflect the greater organizational understanding resulting from the methodologies discussed above.

These consider implementation alternatives.

Security and audit address the audit requirements of computer-based information systems, whether centralized or distributed and whether using conventional files or data base. Specific information engineering techniques that permit active, participative security and audit control are utilized — based in particular on information analysis, data analysis, procedure formation and program

specification synthesis.

**Distributed analysis** is a practical method for identifying the implementation alternatives of distributing data and processing between several interconnected systems in a centralized environment or between several geographically distributed systems.

**Information engineering planning and management** provides a methodology for planning and managing all aspects of an information engi-

neering project.

Checklists of the various activities, their outputs and preferred sequence are provided together with guidance on how the methods interrelate. To validate results, defined quality tests are used at various points.

Next week: Developing a corporate model through information engineering.

## TELEX SERIES 80: THE BEST TAPE DRIVE FOR 4300 SERIES PROCESSORS.

Congratulations. You've upgraded to — or at least ordered — IBM 4300 Series processors to gain major price/performance improvements and environmental enhancements. Now, what about your tape drives?

Telex Series 80 tape drives are the perfect match for 4300 processors. Like the IBM 4300, Series 80 is based on proven technology. It outperforms its competition, and is lower in price.

Series 80 drives offer 6250 bpi (GCR), 1600 bpi (PE) and 800 bpi (NRZI) data formatting — at transport speeds up to 125 ips; all with capabilities beyond those normally required on 4300's and at a price well below IBM's comparable offerings.

Series 80 is smaller and lighter than the IBM 3420 and its equivalents. Five Telex drives fit comfortably in the space normally required by four IBM drives. Series 80 also generates 30% less heat and consumes 35% less power. Patented Telex features like the Supr-Lite Capstan and Telex Tape Path ensure smooth, reliable back-up storage.

For more information on the tape drives made to complement your 4300 processor and other IBM systems, contact your nearest Telex representative. Or call Series 80 Marketing toll-free (800) 331-2623.

The innovation continues... **TELEX.**

Clive Finkelstein has spent 20 years in DP, 15 of which were with IBM in the U.S. and Australia. He founded Infocom Australia in 1976.

His firm is now known as Information Engineering (Aust) Pty. Ltd. and has subsidiaries in New Zealand and the U.S. The latter, known as Information Methods (U.S.A.) Corp., is located in Boston.

## YOUR NEXT HORIZON . . .

### A Business of Your Own

If your career has peaked with your present firm, it may be time to regain control of your future.

More specifically, if you are successful, sales-oriented individual with access to capital, you could own a MicroAge Computer Store. MicroAge is known as the Solution Store, offering just what the business and professional user wants: systems consulting, warranty service and repair, excellent selection of hardware and software, installation, systems integration, even customer training.

As a MicroAge Computer Store franchise owner, you'll be backed by the nation's leaders in microcomputer retailing. Position yourself with MicroAge, arrive at your next horizon.

To receive a complete Franchise Information Kit free of charge and at no obligation, contact the Director of Franchising today.

A FRANCHISE OPPORTUNITY

# COMPUTERS AND GRAPHICS: A TECHNOLOGY COMES OF AGE

**H**ybrid technologies attempt to combine the characteristics of several display systems in order to produce some compromises. But the majority of these technologies wind up being just that: compromises. For example, the storage tube lacks refresh capability. It can "write-through," which directs the writing gun, but intensifies the beam only to the point where it will excite the phosphor on the screen. However, it will not store a charge on the storage grid. This, in effect, emulates the refresh capability in standard refresh terminals.

Tektronix, Inc., the major storage tube manufacturer, incorporated this write-through feature with a display processor and a small display file into one of its terminals. It provided a very limited refresh capability.

The company also offered the ability to identify information contained in the display file and, in effect, "post" it from the display file onto the storage grid. This meant that anything not stored in the display file could be moved around as in a regular refresh graphics system. It could also be posted to a particular place on the screen and then refreshed from the storage grid. The display file could then be rewritten with fresh information.

Unfortunately, there are two basic problems with this compromise. First, the size of the display file was

beam penetrated the particular phosphor determined the display color.

This technique produced a very limited range of colors, such as red, orange, yellow and green.

In order to reduce the amount of flicker in the beam penetration technique, it was necessary to paint all the elements of one color consecutively — that is, all the red elements, then all the yellow elements, all the green elements and so on. This significantly complicated the structure of the display file.

## Input Devices

So far this article has dealt only with output devices, that is, with the flow going from the application program to the display device. Similar problems exist for input devices. Many input devices are available, each of which may be very useful in some specific applications but totally useless in others. Figure 1 (on In Depth/26) is a partial list of commonly used input devices.

Other input devices, such as scanners or voice input, are much less common. In addition, there are some fairly exotic three-dimensional input devices intended for very special purposes and beyond the scope of this article.

The graphics input device may be the most important aspect of the system. While a large body of literature

describes the devices' relative degrees of efficiency, the choice for a given function often depends on personal preference.

Graphics input devices have three basic functions: pointing, positioning and drawing (sometimes considered part of the pointing function). Although most devices perform all three functions, some do so only under great duress.

The usefulness of a particular input device is also highly dependent on the shape of the cursor it manipulates on the screen. (It would be nice if the user could select the shape or style of the cursor based on the application, much in the same manner as selecting a camera's focusing screen.)

**Cursors.** Cursors come in a variety of configurations, but one of the most useful for graphics work is the crosshair, which consists of a horizontal line crossing the screen from edge to edge and a vertical line crossing from top to bottom. This configuration facilitates the horizontal and vertical alignment of graphics elements and is especially useful for input devices that combine horizontal and vertical motion.

**Thumb wheels.** Figure 2 (on In Depth/26) shows a display that uses thumb wheels to manipulate the

crosshairs on a screen. The horizontal crosshair is moved by rotating the parallel thumb wheel, whereas the vertical is moved up and down by rotating the other one.

The relationship between the thumb wheel rotation and the crosshair is very direct, and the crosshair can be positioned both quickly and precisely. Because horizontal and vertical positioning are done separately, thumb wheels are particularly useful when generating images containing horizontal and vertical lines and those in which the picture elements must be horizontally and vertically aligned.

**Light pens.** The light pen is a relatively blunt instrument when compared with most other interactive input devices. It was the first pointing device to be used with graphics systems and operates by sensing light on the face of the screen, then generating an interrupt. It is most commonly used with refresh graphics systems.

Displayed entities are detected, not by their location on the screen, but rather by the instruction that is being executed in the display file when the light pen interrupt is received. When the structure of the display file is known, the identity of the element

(Continued on In Depth/26)

This is Part 2 of a two-part article on computer graphics.

so small that only a very limited number of vectors could be stored in it. The second — and major — disadvantage is that the picture displayed in refresh mode is considerably dimmer, so the picture written in this mode is very difficult to see.

## Advent of Color

Another compromise developed when refresh graphics realized that it needed color capability. The "beam penetration CRT" was developed, in which different colored phosphors were layered on the inside face of the screen. The degree to which the

# Now you can experience the world of computers on television

The computer industry is experiencing almost unbelievable increases in productivity. As one expert has said:

*"If the auto industry had done what the computer industry has done in the last 30 years, a Rolls-Royce would cost \$2.50 and get 2,000,000 miles per gallon."*

This rapid technological change is, in turn, fueling an incredible change in the functioning of business and society in the industrialized world.

As computer people, you are in the middle of this revolution. And as the world's largest publishers of computer-related newspapers and magazines, we do more reporting on the computer revolution than anyone else.

Now, we are going to use the medium of television to step back from the trees and take a look at the forest. We invite you to join us.

Computerworld on television takes a fascinating look at the impact of computers on our society. In a weekly, half-hour newsmagazine, you will see, hear and experience the effect of computers on medicine, sports, law, business, crime, personal privacy, personal growth, home life and much more. You will find out about failures as well as successes, progress and problems. You will hear and see the people who are involved, including:

- Deaf children whose education has been revolutionized by the computer.
- Professional scouts who have used the computer to change the face of pro football.
- FAA Controllers who use computers to land your plane. Is the system adequate?
- Lawyers who are using computers to analyze supreme court decisions.
- Privacy experts who are trying to prevent computers from creating a "big brother" society.
- The psychologist who uses computers to study criminal behavior.
- DP experts in banks whose techniques are doing to paper money what money did to the barter economy.
- Computer people in business who have used computers creatively to improve their businesses — or to create whole new ones.
- Weather experts who use computers vs. the Old Farmer's Almanac.

# Introducing "Computerworld" — the first televised newsmagazine devoted to the development and application of the technology that is revolutionizing the way we function.

Computerworld for television will also step back a bit to provide some perspective on the continuing rapid technological changes in computers. Where is technology today? Where might it be tomorrow? What significant new products are becoming available? How is the industry changing and what is the impact of that change?

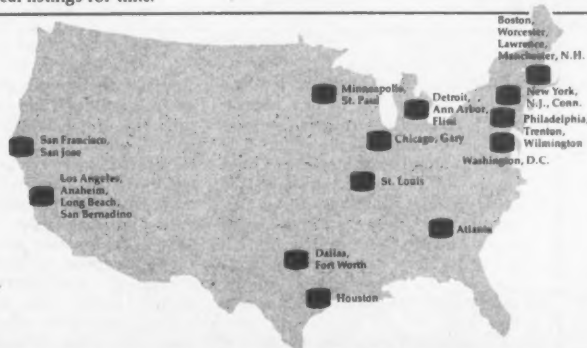

And, we aren't forgetting the lighter side. We'll cover a computerized adult game that helps you improve your sex life. Or the latest in non-sexual computerized entertainment. We have commentary on some of the pitfalls and problems on dealing with computers—both as expert and customer.

There's much more to Computerworld for television, but we can't go into it all. We invite you to find out for yourself. Both experts and interested laymen will enjoy and benefit from this unique new television experience. We're starting with coverage of 13 major tv "ADIS" (Areas of Dominant Influence), which include about half the computer people in the U.S. Later we will add more markets.

Here is the current schedule of stations and times:

## IN DEPTH

## Interactive Input Devices

- Touch panel
- Light pen
- Thumb wheels
- Mouse
- Digitizing tablets and stylus
- Digitizing table
- Cursor pad
- Track ball
- Joystick
- Control dials
- Function keys

Figure 1

(Continued from In Depth/23)

being drawn at the time of the interrupt can be determined.

Light pens have many disadvantages and only two advantages. One advantage is they are historically interesting, in that they were the first interactive pointing devices used with graphics systems. The other advantage is that they are very impressive on first sight, giving an aura of mystery and snappy presentation.

## Barrage of Negatives

The disadvantages are almost too numerous to list. Light pens are awkward to use. The parallax problem, created by the gap between the phosphor and the glass covering the

screen, makes it very difficult to accurately position a cursor. Blank positions on a screen cannot be detected because light pens detect light, and therefore a light source (tracking cross) is needed in order to generate interrupts. They are awkward and tiring to use and hold for more than three or four minutes at a time.

**Cursor pads.** The cursor pad is another relatively useless graphics input device. The cursor pad generally consists of five keys, one each for up, down, right and left, and a fifth that returns the cursor to a predefined home position. It is repositioned by pressing the key corresponding to the desired direction. It will then move in the desired direction a pre-specified number of units. The cursor pad is straightforward to implement and very inexpensive.

**Touch-sensitive panels.** These, too, are not widely used. The touch-sensitive panel is particularly well suited to applications that require identifying areas, as opposed to specific points, on the screen.

It is produced with the variety of technologies, but the most common consists of sets of horizontal and vertical wires, each mounted in a thin plastic sheet, then combined into a grid separated by a third clear plastic sheet. The wires may be separated one-half inch to an inch, depending on the resolution desired for the panel. The panel is then mounted on the face of the screen and when a spot on the panel is touched, the grid intersection nearest that spot is detected and decoded.

The advantage of this type of device is that it is very direct. The user actually touches the section of the screen he wishes to identify. This is useful

Figure 2. Display With Thumb Wheels

in systems utilizing menu selection or in computer-aided learning systems for young children, in which the child identifies the required response to a question by touching the answer.

The main disadvantage of touch panels is their lack of resolution. They can only be used to identify areas, not specific points, on the screen. However, they are excellent input devices for applications in which this lack of resolution is not a constraint.

**The mouse.** This device consists of a small box on which a set of buttons and two wheels with orthogonal axes are mounted. The relative movement

screen. However, this difficulty disappears within two to three minutes of use.

There are two primary disadvantages with the mouse. One is that the wheels tend to slip when the device is moved at a 45-degree angle to the directions of the axes. This reduces the directness of the relationship between the mouse movement and the corresponding cursor movement.

The other disadvantage is that unless the mouse is held such that the wheels correspond exactly to the horizontal and vertical orientation on the screen, the movement of the mouse will not correspond exactly to the movement of the cursor. For ex-

Figure 3. The Mouse

ample, if the mouse is rotated 180 degrees, subsequent movements away from the user will cause the cursor on the screen to move down and, correspondingly, a movement from left to right will cause the cursor to move from right to left.

**The digitizing tablet.** This device is used in conjunction with a stylus or another version of the mouse and consists of a small surface (typically 10- to 11 in. to a side) underlaid by a fine grid of wires typically .001 in. apart. When the stylus or the other version of the mouse is placed on this surface and the interrupt button is pressed, the grid location is read and transmitted back to the graphics

screen. However, this difficulty disappears within two to three minutes of use.

"It prints 18,000 lines a minute and has all the processing power of a Level 6.

Our new PPS II/E does everything but feed the dog."

Ron Borelli  
Director, Page Processing Systems  
Honeywell Information Systems

PPS II was a productive printing system to begin with. But now, by giving users access to the power of the Level 6 computer, we have created a system that is a data collector, processor, and printer all in one. So users can customize an output system to fit their particular printing needs.

The new PPS II/E collects data from word processing diskettes and magnetic tapes, as well as from on-line and remote connections to a variety of mainframes. It can even collect data from multiple sources simultaneously. Then, using Level 6 application programs, it organizes and prints this data at speeds as high as 18,000 lines a minute. PPS II/E will even interface with impact printers for specialized requirements such as check printing.

---

*"This is one of the most cost-effective page processing systems ever designed."*

---

On one hand, PPS II/E is a high-speed non-impact printing system, capable of producing up to 18,000 lines a minute. It also punches, collates, perforates, and addresses. PPS II/E lets you print your own forms, choose your own colors, and sizes, and design your own character sets.

More important, PPS II/E is growth-oriented. You can add disk storage or stackers. Increase printing speeds. Design new characters or forms as your applications change. Or add more CPU power or memory.

---

*"Built-in processing power gives PPS II/E unbeatable flexibility."*

---

Of course, the new PPS II/E is also a processing system.

And it can accept Level 6 software programs. PPS II/E can be used to relieve your computer during peak load times. Or reserved for new applications development. Or custom-designed to perform a certain function. For example, PPS II/E can change your output processing system into an electronic mailroom — accepting input from data or word processors — organizing, prioritizing, and addressing it before printing for quick and easy distribution.

Efficiency has been enhanced by the addition of a new disk queuing capability that lets you store and merge data coming in from different sources. Now you can organize, process, and print information at your convenience.

In short, PPS II/E is a powerful and versatile system that gives you the flexibility to manage your operation with maximum efficiency. It prints like a demon. It processes like a computer. It does just about everything.

For more information call 800-328-5111. (In Minnesota call collect 612-870-2143.) Or write Honeywell, 200 Smith Street (MS 487), Waltham, Massachusetts 02154.

# Honeywell

The ingenuity of people, the power of computers.

## IN DEPTH

(Continued from In Depth/26)  
device.

This medium's similarity to pencil and paper makes it very natural for a variety of applications. It is a particularly good device for freehand sketching or for entering nonmathematical information into a computer, as well as being an excellent device for menu selection.

One of the most common applications of the digitizing tablet and stylus is to have an overlay containing

menu items which is placed over the sensitive part of the tablet. The menu items are selected merely by placing the stylus over the desired menu item and pressing the interrupt button.

Again, one of the disadvantages of the tablet is the problem of hand-to-eye coordination, but this disappears as soon as the user becomes familiar with the device.

**The digitizing table.** Essentially a large version (36 in. by 48 in.) of the

digitizing tablet, this device has a sensitive work surface. It is primarily used for digitizing maps or printed circuit board layouts or schematics, for rendering mechanical drawings or for any information currently contained in a large drawing and which needs to be entered into a computer system.

Figure 4 shows a combination of a digitizing table, digitizing tablet and stylus. This is a fairly common configuration in large computer-aided

design systems, particularly in ones that are menu-driven. The information to be digitized is placed on the digitizing table, and the menus that enable selecting the different functions, operations and graphics elements available are placed on the tablet.

**The track ball.** Sometimes called a tracker ball or a tracking ball, this is another very effective input device, particularly well suited to three-dimensional applications. Shown in Figure 5, it consists of a small ball, typically 2- to 3.5 in. in diameter, mounted in a box, with interrupt buttons mounted on top of the box next to the ball. The track ball provides a very direct method of manipulating graphics information.

In particular, if the application calls for the manipulation of three-dimensional images, track balls offer the most direct visual feedback of any input device.

One of the problems associated with the track ball is the difficulty in drawing horizontal and vertical lines. It also suffers a certain amount from slippage, much like the mouse.

**Control dials.** This type of input device is not commonly used. Control dials are essentially programmable potentiometers. They are typically mounted in a box with anywhere from four to 16 dials, each of which is selectable and programmable.

Control dials generally do not manipulate cursors; rather, they manipulate an image on the screen. They are typically for operations such as panning (moving the existing picture left to right or up and down) or zooming (either enlarging or decreasing the size of the picture). A version of control dials can change colors or select a color pallet.

**Function keys.** These are sometimes, though not always, considered input devices. Function keys are merely special keys for executing certain procedures. A typical application is a key associated with a particular graphics entity. The entity can be preprogrammed, then called up very quickly at various locations on the screen by simply striking the key.

#### Capturing Data

We know how data should be manipulated in order to produce effective graphics. However, the major problem is getting a large amount of information into the machine to start with. This is particularly significant in cases where a data base of graphics information already exists on paper and a newly installed computer system must capture all the paper-based information.

Existing drawings are captured primarily by replicating them on a digitizing table. However, some applications use scanners, input devices that optically scan drawings in an attempt to digitize the information based on the amount of light reflected. There are significant problems with these devices, not the least of

## THE ANN ARBOR AMBASSADOR

SETTING THE NEW STANDARD IN PRICE AND PERFORMANCE

- Large 15-inch non-glass screen
- 80-line (4800 character) display
- Both Zoom and Scroll control, local and remote
- Selectable scrolling region
- 5 Graphic Renditions: bold, blink, blank, reverse-video and underline
- 5 Area Qualifications: protect, guard, numerics, justify and security
- 22 Cursor controls, including set, read, save, restore and move N
- 12 Tab controls, including column and field tab stops, and tab with justify
- 13 Erase controls
- 12 Edit controls, including the ability to locally rearrange data on the screen
- 12 Send controls and modes
- 10 Print controls and modes, including local and remote copy, and print format control
- 11 Receiving modes, including slow scroll and pause
- 11 Operator convenience modes, including selectable cursor
- 6 Setup lines permit review and control of terminal modes, send and print parameters and diagnostics
- 12 Function keys hold up to 24 down-load strings for transmission or internal execution
- Supports ANSI X3.64, ECMA-48, and ISO DP 6429 coding
- Ann Arbor quality throughout
- And much, much more!

We think you'll find the Ann Arbor Ambassador not only powerful and flexible, but easy to use. Call us for more information at Ann Arbor Terminals, Inc. telephone (313) 663-8000.

## IN DEPTH

which is translating raster format information into vector format information, then attempting to identify graphics entities.

#### Hard-Copy Output

Output devices do not necessarily need to be CRTs or interactive display devices. However, images displayed must be translated from world coordinate systems into some device-dependent coordinate system, determined by the hard-copy output device being used. Graphics hard-copy devices may be generally categorized as printers, plotters, film recorders and "other."

Standard line printers may be used

*'Technical breakthroughs with tremendous impact will likely be made in the next six to 18 months. New applications will occur because of a friendlier environment and increased understanding. The public's acceptance will result mainly from computer animation, as in the Levi's and Wang television commercials and in movies such as "Star Wars" and "The Empire Strikes Back."'*

to display limited graphics by placing alphanumeric characters at strategic places on the page and also by superimposing alphanumeric characters in order to obtain a halftone effect. Pictures generated in this manner are generally not particularly effective, and advances in other graphics hard-copy technology have made this practice outmoded.

**Dot matrix printers** can also be used to generate pictures. The quality of the picture produced on a dot matrix printer-plotter is dependent on the resolution of the plotter, with a common resolution of approximately 200 lines per inch producing visually effective pictures.

**Plotters** can be categorized as pen, dot matrix or ink jet. Pen plotters can be subdivided into drum and flat-bed plotters.

Drum plotters are generally of two

types. In the first, a continuous roll of paper is fed over a drum, which rotates back and forth in order to produce motion in one direction. The pen carriage is mounted horizontally across the drum, allowing the pen to travel back and forth in the other direction. The combined pen carriage and drum movement produces vectors in any desired direction. The pen carriage can often accommodate more than one pen, each of which is program-selectable, giving the capability to plot line drawings with different colors.

The other type of drum plotter differs only in that a single sheet of paper is taped to the drum, as opposed to its being fed a continuous roll of paper. Paper width for drum plotters generally tends to be between 24 and 36 in.

Flat-bed plotters are generally more precise than the drum plotters and also are generally larger, although recent technology has produced desktop flat-bed models. Prices on drum plotters range from \$4,000 to \$25,000, with the most common price range being \$10,000 to \$15,000. Large flat-bed plotters are much more expensive because of the requirements for increased precision and range from around \$120,000 to \$200,000.

The basic difference between pen plotters and dot matrix plotters is that the pen plotter is a vector-oriented device, and the dot matrix plotter is raster-oriented. When using a dot matrix plotter for line drawings, a vector drawing must be converted to a raster format before it can be plotted.

One of the claims for dot matrix plotters over pen plotters is that it takes a constant amount of time — one to three minutes — to plot an entire picture, regardless of its contents. But this is an extremely misleading claim, since it does not take into account the fact that this rasterization process must take place before the plot can be produced.

**Ink-jet plotters** are primarily used for color applications. They are capable of producing very large plots containing an almost infinite variety of colors. They operate similarly to drum plotters except that instead of a

Figure 4. Digitizing Table, Tablet and Stylus

pen carriage, there is a carriage that contains three different-colored ink jets. The jets move in front of a rotating drum on a worm gear. The amount of ink, as well as its color and intensity, is determined by comput-

er-generated codes.

Very large, very precise images in a wide variety of colors can be produced with this technology. It is well suited to applications such as image

(Continued from In Depth/29)

analysis. These plotters tend to be fairly expensive, ranging from \$50,000 to \$75,000, although a smaller model, recently introduced, sells in the neighborhood of \$6,000.

**Film recorders.** The photoplotter is probably the best known in this category. It is used to produce extremely precise drawings for such applications as printed circuit board and integrated circuit mask artwork. Photoplotters are very precise, very stable and very expensive. They are special-purpose plotters, specifically designed for extremely high-precision plotting.

Other film recorders are used primarily to produce color hard copy from raster graphics terminals. They produce 8- by 10-in. prints, color slides and, in some cases, videotape. This area is experiencing furious activity because of the need for business graphics applications for management information systems and financial information systems.

In the category of "other," Xerox Corp. has produced an interface for its color copier that allows it to be utilized as a hard-copy device for color graphics terminals. In addition, Tektronix manufactures a hard-copy device that produces 8- by 10-in. prints. The picture is scanned directly from the face of the storage tube and is transferred to a heat-sensitive paper, which is then developed to produce the image on the paper.

**Graphics Software**

It is difficult to know how to distinguish graphics software characteristics. It has progressed through the same stages as software for any com-

## The Market For Computer Graphics

Observers generally agree that computer graphics is poised on the edge of remarkable growth. The only disagreements concern how good the market will be.

Several reports have recently appeared, but it's difficult to compare them because of semantic differences. Some refer to the graphics business, but really mean the CAD/CAM industry. Others are concerned only with the growth of the business systems market. One quotes growth in dollar revenues; another in number of terminals installed.

However, the same tone pervades all reports: The graphics industry is booming. Thomas Henwood, in a First Boston Corp. report, said industry growth will average nearly 40% annually throughout the '80s.

The report pegged current mar-

ket penetration at less than 5% and predicted an \$8.3 billion market by 1990.

Another report by Venture Development Corp., quoted in *Business Week* (June 16, 1980), said 210,000 graphics terminals will be in use by 1983, compared with 12,000 in 1978. Reliable sources place existing orders for IBM's 3270 terminal at between 50,000 and 100,000 units. Venture Development's report also predicted that half the terminals shipped in 1983 will be for business applications, compared with one in 10 today.

This is consistent with a report by Oratech, a Canadian firm, which said business graphics will account for 42% of the market by 1985.

Computer graphics is going to be big business.

puting system: from very low-level, device-dependent assembly languages to so-called "graphics languages" and on to extensions to existing languages in the form of subroutine or procedure packages. Finally, it has reached the stage of graphics packages that enable users to define pictures easily by specifying sets of parameters rather than by actual programming.

The software problem was compounded by the basic differences in

graphics display technologies, particularly between the storage tube display and the refresh display. Researchers found that they were programming for specific devices and, as a result, there was a lot of reinventing going on.

Initially, a graphics device required some sort of graphics software package to drive it which also provided an application program interface. Unfortunately, these interfaces varied, depending on the individual de-

vices, so applications had to be rewritten each time a new device or new feature became available.

The situation was not eased by competition among graphics equipment manufacturers, each of whom was trying to offer features not available from the competition. Eventually, this led to some very primitive attempts to standardize the software.

At one time, California Computer Products, Inc. had a large number of plotters installed and had produced and marketed a software package to drive them, a set of Fortran-callable subroutines that did moves and draws, set scaling parameters, drew horizontal and vertical axes and so forth. For some time there was strong movement afoot to encourage the graphics user community to be Calcomp-compatible. Because of the company's large customer base and the quality of the software package, it became a de facto standard for hard-copy graphics. However, it was not suitable for interactive work.

Later, around 1973, Tektronix produced and marketed the Plot-10 graphics software package which was designed to allow Fortran programs to produce pictures on the Tektronix storage tubes. This set of subroutines provided a high-level language, interactive graphics capability and eventually replaced the Calcomp package as a widely accepted standard in North America.

Other packages also became available at about the same time, and interest in graphics languages and standardization or device independence began to increase significantly. The search for a universal graphics language was on.

**Groping for Standards**

The International Federation for Information Processing (Ifip) Working Conference on Graphics Languages, held in Vancouver, Canada, in 1972, was one of the first attempts to identify the common elements in then existing graphics "languages" and packages. It hoped to define the basis for a common graphics language. While that did not occur, a tremendous body of information was exchanged concerning the problems associated with the computer processing of pictures.

In 1974, the Association for Computing Machinery's Special Interest Group on Graphics (SigGraph) formed a group known as the Graphics Standards Planning Committee, whose stated objective was to "establish the groundrules for future standards" for graphics software systems. The committee was not particularly successful in this effort until 1976, when another Ifip workshop was held on graphics methodology in Seillac, France.

The workshop "...identified the need to study the structure of application programs in order to understand how to design software systems to support them. It also made clear the advantages of separating

# Pride<sup>®</sup> -ASDM

## the world's only commercially available Automated Systems Design Methodology

**SYSTEMS DEVELOPMENT PRODUCTIVITY FOR THE 80's**

For the first time, a proven Systems Design Method is implemented through the direct use of the computer. With "PRIDE"-ASDM, analysts and designers interact with the computer throughout the entire development process. "PRIDE"-ASDM CAN AUTOMATICALLY ...

- Perform Computer Aided Design (CAD) & analysis for systems development.
- Generate & Maintain all systems documentation.
- Provide Information Resource Management (IRM).
- Monitor Business Systems Planning (BSP).
- Perform effective Quality Assurance (QA).

This advanced technology is available today. It is operational on IBM, Honeywell, Burroughs, Hewlett-Packard, Univac, DEC, ICL, CDC, and Amdahl configurations.

"PRIDE"-ASDM is the next logical step into your future; call or write us today.

## IN DEPTH

the essential picture-generating functions (the "core") from other functions such as modeling functions, likely to be application specific" (Newman and van Dam, "Recent Efforts Toward Graphics Standardization," *ACM Computing Surveys*, Vol. 10, No. 4, December 1978).

Other early work was being conducted independently on device-independent standard graphics packages, including the work on the Virtual Graphics Machine initiated by the author at Bell Northern Research in 1975, and the work on a standard similar to the GSPC proposed standard, called the Graphical Kernel System, from Germany. The GSPC work culminated in a proposed standard, referred to as the Core System, which has been used as the basis for several commercially available device-independent graphics software systems.

The need for standardization has become widely recognized by the manufacturers of graphics hardware, to the extent that at least two are currently producing systems that contain Core-compatible firmware, even though the Core System is still a proposed standard. In the U.S., the American National Standards Institute is studying standards in the areas of a Core-like, full three-dimensional standard, a small Core subset and a virtual device/metafile. At the international level, the two work items are the German GKS package and the metafile. At this writing, it is not clear how the two programs will be reconciled.

#### Applications Standards

Some degree of standardization has also been attempted in the area of graphics application software. Originating from in-house graphics packages, these general applications software systems provide the ability to produce x-y graphs, pie charts, histograms, three-dimensional surface graphs and other similar data representations. By having the user select the type of graphs desired, data and titles are supplied in the correct format and specific output device.

These systems range from being fairly small, with somewhat restrictive capabilities, to large systems with features that are rarely exercised. Costs vary considerably based on the capability of the system and leasing/purchase price, installation charge, maintenance contract and so forth and can range from \$5,000 to \$40,000.

The problem with the large software systems is the same as that with the large data base management systems; that is, 80% of the code may do 80% of the application, but the other 20% of the code may not be used (but must be paid for, maintained and reside on the system). The other 20% of the application either doesn't get done or must be done on another system (or by code that is patched into the large system, thereby jeopardizing the maintenance contract).

The trade-offs between buying a large general-purpose graphics system and writing one in-house must be examined very carefully before committing to one option or the other. Either choice can be both unsatisfactory and very expensive if the decision is not made carefully.

#### Looking Into the Crystal Ball

The computer graphics field is changing at a tremendous rate, even when compared with the spectacular

changes taking place in the DP industry in general. As the technologies improve, the application areas using graphics will become broader and the impact of communicating information by utilizing computer-generated pictures will become much greater.

The technological improvements will be on two levels — evolutionary and breakthrough. Evolutionary changes include using more intelligent terminals with graphics com-

puters. Graphics systems will become widely available with greater processing power and more storage capability, with multiple microprocessors handling various functions within the systems. In general, graphics terminals will cost more than they do today, but will have much greater capability.

Video disk technology will make masses of data immediately available to the systems. Applications will be

# Ask Ramtek.

(Nobody knows more about Colorgraphics)

## See the difference a sharper image and more colors make in our new colorgraphics terminal.

The 6212 displays the graphics output from your data base in clear bright images, letting you use color graphics in new, more powerful ways.

**Add colorgraphics to your present MIS program.** If your management is still relying on printouts or monochrome displays for information, the 6212 is the easy way to upgrade to colorgraphics. It uses a standard RS232C interface to your host computer, and is supported by many of the current graphics software packages.

**High resolution lets you display more data.** Greater resolution (up to 640 x 512 picture elements) means greater display performance. Consolidate and present more information in each display frame, without diminishing image clarity. Each terminal user can select 16 displayable colors from the 6212's palette of 64.

**Our Colorgraphic Language (CGL) makes it easy.** The 6212 is programmable in its own easy-to-learn set of English language commands. Users with no graphics experience can quickly move up to high-performance color graphics.

**Look to Ramtek for more than terminals.** If you need high-resolution business graphics with stand-alone computing, the Ramtek 6214 offers a complete system with floppy disk and UCSD Pascal™. Ramtek has a complete line of colorgraphic and imaging products, including hard copy devices, monitors and colorgraphic printers. Plus a

worldwide service network for support after you buy. For more information, write to Ramtek, 2211 Lawson Lane, Santa Clara, CA 95050.

**How do colorgraphics fit into your MIS picture?** To help you evaluate the business graphics products on the market, Ramtek has prepared the booklet, "Matching colorgraphics to your Management Information System." It's Issue Number 5 of Ramtek's Use Our Experience Series. To get your free copy, write to Ramtek on your company's letterhead.

**Information  
management's  
expanding  
vistas.**

Dataphone® digital service, the nation's largest and best-served network of its kind, greatly extends the capability of the Bell System communications network—already the world's most advanced information management system. And Dataphone digital service continues to expand.

Using a functionally discrete digital network, it now covers most of the nation's major data centers, and by the end of 1981 will be available in 96 service areas comprising more than 350 cities.

Digital end to end, its outstanding performance offers users extraordinary accuracy and dependability, greatly increasing efficiency and throughput in data communications.

With its assortment of speeds and enhancements, the service will accommodate a wide variety of applications, involving two stations or hundreds. And Dataphone digital service provides guaranteed performance, and virtually eliminates excessive downtime, slow restoral time, slow response, repeated transmissions and scheduling backlogs.

This service demonstrates the expanded needs the Bell voice and data networks are meeting for American business. Companies coast to coast have found that our unparalleled knowledge of advanced communications gives them unprecedented information management capability.

One call to your Bell Account Executive can put our knowledge to work for your business.

**The knowledge business**

## IN DEPTH

(Continued from In Depth/31)

available on printed circuit boards, much in the same way that language interpreters are available today. Automatic routers for printed circuit boards will be microcoded and blown into programmable read-only memories, as will other applications such as business simulations and project management packages. Color graphics will become more widespread as more users learn how to apply color effectively to present infor-

mation.

Because of this trend, and because of the increased speed with which images can be displayed and modified, display tube sizes will generally not get any larger. The principle for displaying information will be to display only what is pertinent at the time, but to make adjacent information immediately available. Larger screens make it too easy to display pictures that contain too much information, resulting in cluttered pic-

tures, confused users and a drop in the amount of information that is actually communicated. Color, faster processors and large amounts of on-line storage will be utilized to avoid this problem.

Two technological breakthroughs that will probably be made in the next six to 18 months will have a tremendous impact on the graphics industry itself, but more so on the overall use of computers in business. The first is high-resolution color.

As mentioned in the section on raster graphics, the goal is to produce a flicker (jitter)-free, crisp, full-color image with a resolution of 1,000 by 1,000 pixels. This involves scanning 1,000 lines of 1,000 pixels each, 60 times a second, with each pixel having three or more corresponding bits in the frame buffer. The monitors will soon be available.

As mentioned earlier, the Mitsubishi C8912 color monitor will scan 900 lines 60 times a second (1,800 lines noninterlaced), and Mitsubishi has stated its intent to produce a 2,000-line monitor. When this breakthrough is made and the price becomes competitive, high-resolution and color displays will virtually replace storage tubes.

The other major technological breakthrough is expected in the area of inexpensive color hard copy. At this writing, a satisfactory color hard-copy unit is not available for the majority of graphics applications. However, competition among manufacturers is fierce. Cost-effective, inexpensive, high-quality color graphics hard copy should be available within 12 months.

Significant changes will also occur in almost all graphics application areas, not only because of the technological advances. We will see greatly improved user interfaces providing a friendly environment, along with increased awareness of how well computer graphics conveys information.

## Consumer Graphics

The public's acceptance of graphics will come mainly through the entertainment and advertising industries. Computer animation laboratories, such as the one at the New York Institute of Technology, are already producing spectacular television advertising, such as the Levis and Wang commercials. And graphics will be used even more extensively than before in films on the order of "Star Wars" and "The Empire Strikes Back." In fact, a computer animation studio is currently being set up at Lucasfilms, Ltd. in San Anselmo, Calif., which will use computer graphics extensively in the production of feature films.

## Office Graphics

Word processing will be dramatically affected by computer graphics. The term "word processing" is actually a misnomer. The activity is really document preparation, of which word processing is a subset.

Editing a document may realistically be considered a graphics process. For instance, when paragraphs are moved or deleted in a manually generated document, they are identified by location and the area they occupy, not by line numbers and character positions. The same process occurs in regular computer graphics systems.

Graphics will affect the document preparation field in two ways: editing will be done graphically, that is, by identifying the area to be moved

**"I just installed the most flexible graphics software available..."**

**"It sure paid off."**

A revolution was taking place. We learned computer graphics dramatically improved the decision-making process. Graphics software with "FLEXIBILITY" was the only way to make it happen. We already had some basic graphic software. It was hard to maintain and not adequate for our needs. Our users were demanding more productive and higher quality tools.

After installing DISSPLA\* and TELL-A-GRAF\*, ISSCO trained our users so that we were discovering profitable new applications immediately. Before ISSCO left our center, all of our output devices were interfaced. Field-proven code, maintenance, support, and ISSCO's 12 years of experience—for me it really paid off.

TELL-A-GRAF's\* English-like commands made graphical representations of the information in our data bases simple and easy to access. We now can produce a graph with only one command and as needs dictate we can easily adjust any aspect of our graphics to enhance understanding. Both our highly demanding computer specialists and our secretaries easily learn to chart or graph the masses of data already in our computers. ISSCO GRAPHICS imbedded in existing applications programs has become very popular.

For us, installation of DISSPLA\* and TELL-A-GRAF\* was the right decision.

ISSCO GRAPHICS run on IBM, DEC, CDC, CYBER, CRAY, BURROUGHS, PRIME, UNIVAC, and HONEYWELL.

and pointing to where it should be moved (already available on a few systems). It will be possible (and even convenient) to include graphics such as charts and graphs in the body of a document without resorting to cut-and-paste techniques.

#### Industrial Graphics

The computer-aided design/computer-aided manufacturing (CAD/CAM) industry will be profoundly affected by this new technology. The market is expected to grow 40% to 50% a year for the next five years.

CAD systems are computer systems with graphics capability that are intended for specific applications such

agreements with the major computing system vendors. This leads into the unlikely situation of software vendors selling hardware.

With CAD's options and applications increasing rapidly, it is very important to understand specific system requirements. A CAD system almost always has more of an impact on an organization than was originally assumed. The impact can be quite positive, but when a mistake is made, it is usually a beauty.

The terms "computer-aided design systems" and "computer graphics systems" are often mistakenly used interchangeably. CAD systems are integrated hardware and software computer systems designed for a particular application or set of applications and include graphics capability. General graphics systems, on the other hand, are not oriented toward a specific application, but they provide graphics capability that can be utilized by any application requiring

that capability.

This distinction is becoming less and less clear, however, with the onslaught of intelligent graphics terminals, satellite systems, graphics computers and so-called "business graphics" systems. It is in business and management that graphics will have the greatest impact.

The combination of computer graphics' power, the technology's maturation, the increased attention

(Continued on In Depth/36)

### The Latest On Graphics

Two excellent newsletters cover current developments in computer graphics:

- "The Harvard Newsletter for Computer Graphics." Harvard Laboratory for Computer Graphics, Subscription Department, P.O. Box 89, Sudbury, Mass. 01776. Twenty-four issues cost \$125.

- "The Anderson Report." Anderson Publishing Co., Simi Valley Business Park, P.O. Box 3534, Simi Valley, Calif. 93603. Twelve issues cost \$75.

Two organizations concern themselves with computer graphics developments. They are:

- SIGGraph (Special Interest Group on Graphics). Association for Computing Machinery, ACM-SIGGraph '81 Conference Office, 111 E. Wacker Drive, Chicago, Ill. 60601, (312) 644-6610.

- National Computer Graphics Association (NCGA). 2033 M Street N.E., Washington, D.C. 20036, (202) 466-5895.

as mapping, piping, printed circuit board and integrated circuit design and mechanical design/drafting. They typically consist of a mainframe minicomputer and console with tapes and disks, one or more graphics terminals, often a digitizing table and tablet, a printer, one or more plotters, plus systems and applications software.

The computing hardware is generally either purchased from a major vendor or built in-house, as are the graphics terminals. The software is almost universally designed by the vendor for the particular application.

The CAD system vendors offer single-source turnkey systems. To complicate this situation, some of the major computing system vendors have purchased the rights to application software packages and are offering the combination as a standard system. In addition, the vendors of CAD systems software will often do the same thing, having entered into

# The Wang VS computer puts the crunch on your data, without putting the squeeze on your staff.

#### The Crunch.

High-volume information processing comes easy to Wang Virtual Storage computer systems. Virtual memory management gives each VS user a full megabyte of logical address space for big-program development and execution. Multiple Input/Output Processors work independently to break the I/O bottleneck, buffering the CPU for faster throughput. And our sophisticated VS instruction sets cut through complex tasks with ease.

Expansion is easy, too. The VS family lets you grow from 6-user support on the VS 50 to 32 users on the VS, to 128-user support on VS 100 systems. Use up to 2 million

bytes of main memory and 4.6 billion bytes of mass storage. And get an eight-fold increase in processing speed with the VS 100's 32-bit processor, 64-bit data path and 32K-bytes of integral cache memory. While protecting your software and peripheral investment every step of the way.

#### Unsqueeze.

But Wang VS systems aren't just powerful computers. They're complete systems that make computer power ingeniously easy to use. Our programming aids, for example, let you create a data entry screen as easily as writing a word processing document. Our Symbolic Debug utility lets you test and modify

COBOL, BASIC, RPG II and Assembler programs at the source level. And our menu-driven file management facilities let you set up files, process transactions, generate reports and establish field-level security controls — interactively.

In all, Wang VS systems give you more easy ways to use computer power than any other system marketed today. Word processing, phototypesetting, electronic mail and telecommunications are all VS system options.

Call us. And let your local Wang Representative show you how to apply the crunch. Without getting caught in the squeeze.

1980 Wang Laboratories, Inc., Lowell, MA 01851

Making the world more productive.

## IN DEPTH

(Continued from In Depth/35)  
being paid to the user and the vast amount of data used in running businesses will cause the widespread use of computer-generated pictures as part of the decision-making process of many companies. In a recent article, David Friend, president of Friend Information Systems, stated: "About 80% of the decisions can be made with about 20% of the information, so one way for a manager to increase his efficiency is to cut back the

amount of information he receives and focus on the important 20% of core information" ("Color Graphics Information Systems Boost Productivity," *Mini-Micro Systems*, May 1980).

Computer graphics may provide the only feasible means by which this can be accomplished.

As stated previously, one of the major stumbling blocks to the widespread use of computer graphics for management is the lack of cost-effective

color graphics hard copy. When this becomes available, graphics use will skyrocket.

Once computer graphics for management purposes is well established within a company, it will be used more and more frequently for boardroom presentations. With currently available technology, it is a straightforward process to create a set of presentation frames, store them on a floppy disk and call them up to be displayed as required. The pictures

can be modified during the presentation if desired and stored back on the floppy disk as modified for subsequent use. In addition, with video compatibility available on many raster graphics systems, the picture being displayed can be projected onto a large screen at the front of the boardroom.

The next step, then, is to use this configuration in conjunction with standard voice teleconferencing to produce a system that combines voice and data conferencing (including graphics) through the standard telephone network to several remote locations with similar facilities. The technology for this is available today, off the shelf, and is relatively inexpensive.

Finally, the home/hobby/personal computer is having a serious effect on computing in general and on the use of computers on a small scale. This interest area began "underground," but is now of major proportions. It is too early to predict how it will happen, but the use of graphics in these systems is going to have a surprising and positive impact on the field of interactive computer graphics in general. It is definitely something to watch for.

Computer graphics is no longer just an expensive toy. The technology has matured, and the market for its application is huge. The question is no longer whether an organization can afford to utilize computer graphics, but whether it can afford not to.

### We're cleaning house in the computer industry.

We've taken mainframe technology and engineered it into the smartest line of desktop computers in the industry. That's our sole business.

We put data processing and word processing into a manageable package that fills the void between mainframes and limited-function machines, with all the amenities you would want, including local networking.

We've thrown conventional thinking out the window. So it's time to throw out everything you believe about computers. And find out why we're cleaning up in this business.

# SDS

Until now, your business  
wasn't computing.

# Film is cheaper than paper.

An impact printer can chew up an awful lot of paper. Trouble is, the paper it chews up is costing you more and more every year.

This year, you can expect to pay about \$29.00\* per 1000 pages of 3-part computer paper, 56% more than you paid two years ago.

With the price of paper climbing higher and higher, consider the advantages of owning a Kodak Komstar microimage processor. This dry laser printer doesn't use *any* paper. It prints on microfilm, instead. Rather than spending \$29.00 to print a 1000-page, 3-part report, you'll spend only about \$1.00, the price of 9 microfiche.†

A Kodak laser printer works on-line *or* off-line. It's 6-8 times faster than an impact printer, which means you can save more on time and labor. It takes 50 minutes to decollate, burst, bind, and package a 1000-page report against only 9 minutes to print, duplicate, and package the same report on microfiche.

If savings like these interest you, send us the coupon for more information. Or ask your Kodak representative for a demonstration of Kodak Komstar microimage processors.

Better make up your mind soon, though. Before the next increase in paper prices does it for you.

\*Prices vary with geographic location and grade of paper purchased.  
†Includes one original set and two duplicate sets.

# Kierulff Now Delivers Memorex Computer Media Products To You Nationwide

At last, you can one-stop-shop Kierulff for Memorex's complete line of computer media products. That's big news, because you now can get fast delivery of Memorex computer tape, flexible disc media, and disc packs and cartridges from any of Kierulff's 17 Distribution Centers.

#### Error-Free Flexible Discs

Memorex's line of 8 and 5 1/4 inch flexible disc media is among the broadest in the industry, satisfying all of your needs. Available are single or double sided, single or double density, and soft or hard sectored flexible discs. Each is guaranteed to be 100% error-free by Memorex.

#### Rigid Disc Media

#### For Every Application

Whether you need disc packs, cartridges or modules, look to Kierulff and Memorex. Twelve different disc pack models are available, covering both front and top loading cartridges and multi-plated disc packs for

all of today's leading disc drives. In addition, most models are available in a flag-free version for added data security. All Memorex disc cartridges are protected by the exclusive Shockwatch™ impact detection feature, which warns you if a cartridge has been damaged by mishandling.

#### Three Kinds Of Tape

You can count on Kierulff and Memorex to supply exactly the right tape. For everyday use, choose the MRX IV\* premium work tape, and get better tape to head contact, increased signal response and less self-generated debris.

Or specify Quantum,\* the premium tape that's hypercritically tested to assure signal remaining levels that are 100% higher than industry standard.

And finally, there is Cubic HD,\* for today's high technology tape drives. Tested at both 6250 and 1600 BPI, this tape gives optimum performance on newer generation tape drives.

But that's not all. All Memorex computer tape products utilize the exclusive SuperReel.™ No more hub to drive fit problems or warped or broken flanges. This is the long life hub for the long life tape.

#### Call Kierulff

Kierulff and Memorex can make your life easier. Memorex manufactures the computer media you need. Kierulff makes sure you get it on time and at the finest distributor terms, no matter what city you're in. All you have to do is call Kierulff, sit back... and relax.

## Electronic Switches — Part 2 Tour of Networks Shows Need for Switches

By Gilbert M. Kaufman  
And David G. Tolwinski

Special to CW

To illustrate the need for intelligent electronic switching, we will briefly tour a few present-day networks where such switching plays a vital role.

Our first example is a large on-line service network with three regional computing centers, each supporting a particular set of applications. The network manager is responsible for seeing that none of its widely dispersed users perceive any appreciable downtime.

He would like to concentrate his small group at the headquarters site and somehow provide monitoring, diagnostic information and reconfiguration control for his domain. Additional challenges arise because a variety of vendors and equipment types are represented.

Remote channels serving a variety of terminal types and line protocols are statistically multiplexed from scattered district sites to regional computing centers. At each regional center, a large CPU with companion front-end processors provides a set of data processing applications to synchronous data users.

Asynchronous data users are supported by several minicomputers with specific applications and data bases. The regional centers are interconnected by multiplexed channels that serve several purposes.

For economic reasons, users are multiplexed or directly connected to their nearest regional center, and from there they are routed to the regional center that actually supports the desired application.

The critical multiuser equipment elements in this complex network include large CPUs, minicomputers, front-end processors and statistical multiplexers. For all but the first of these, the most effective backup consists of on-site spares, where a reserve device is substituted for a failed device.

*This is the second half of a two-part series on intelligent electronic switches, which the authors see as a boon to performance evaluation of a user's full data network.*

tuted for a failed device.

For minicomputers, data base transfer is accomplished by DP support personnel. Because a reserve (very expensive) CPU at each regional site is neither practical nor feasible, the network manager has devised a clever distributed backup scheme.

Each regional site provides primary service for its on-line synchronous applications as well as backup service for another site's applications. The interregional multiplexed links are used continuously for the maintenance of duplicate data bases, and if a regional CPU fails, its users are switched to the appropriate backup site.

One approach to this complex switching problem would involve extensive use of remote-controlled A/B patching equipment. Every conceivable failure scenario would be determined and an appropriate alternative ("B") response would be arranged.

But this approach eventual-

(Continued on Page 72)

## Wang Modem Operates With Bell, Racal-Vadic

LOWELL, Mass. — Wang Laboratories, Inc. has introduced an asynchronous/synchronous modem for 300- and 1,200 bit/sec operation compatible with Bell's 212A and 103J sets and Racal-Vadic, Inc.'s 3400 series.

Built for Wang by Racal-Vadic, the full-duplex WA3451 modem supports Wang's 2236DE interactive terminals that run with the vendor's 2200 series computer systems.

In asynchronous mode, it is Wang's recommended modem for dial-up remote connection of these terminals to 2200 LVP or MVP systems and for use with the vendor's 2200 Remote Control and Maintenance (RCM) software that allows other terminals to emulate 2236DEs.

The WA3451 can also be used with Wang asynchronous emulation software such as 2200 Teletype (for Teletype Corp. terminals), IBM 2741, VS teletypewriter and Teletype for Wang Office Information Systems (OIS) and Word Processing Systems (WPS).

A WA3451 modem can also run with Wang synchronous emulation software for data

communications between a Wang system and a host or terminal that supports IBM 2780, 3780, 3741 or 3275 binary synchronous protocol, a spokesman said. Synchronous WA-3451s can also support transfer of files and documents among 2200, OIS, WPS and VS systems.

### Mailway Support

The Wang modem is not compatible with Bell automatic-dialing units, but does support all levels of Wang's Mailway electronic mail and message system.

To use WA3451s with Mailway Level II or III for automatic dial-up operations, a Mailway distribution center can be configured with Bell 212A-equivalent sets and Bell 801 automatic-dialing units, the spokesman stated.

Available with a range of self-diagnostic features, the WA-3451 costs \$1,050 in quantities of less than 50. Larger orders lower the unit price to \$990 and maintenance runs another \$12/mo, the Wang spokesman said from One Industrial Ave., Lowell, Mass. 01851.

## Harris Fiber-Optic Link Extends Channels for 9200

DALLAS — Harris Corp. Data Communications Division has announced a fiber-optic link for its 9200 information processing system said to extend the maximum direct-channel attachment between an IBM host and 3270-type displays and printers from 1.5- to 3.5 km.

Designed for data processing networks in large office or industrial complexes, the Harris fiber-optic link transmits data by light impulses at speeds up to two million bit/sec, the company said. The link allows dis-

plays and printers which normally communicate with a host over transmission facilities to have direct channel access, the vendor claimed.

Available with the company's 9200 systems in September, the fiber-optic link will lease for between \$200 and \$240 per month based on a two-year lease and will carry a purchase price of between \$7,000 and \$9,000 from Harris Corp. Data Communications Division, 16001 Dallas Pkwy., Dallas, Texas 75240.

**NATIONAL COMPUTER**  
Communications Corp.  
The Greatest Name in Terminals  
260 West Avenue, Stamford, CT 06904

- The Teletype Model 43 has proven to be so reliable that National Computer is taking the bold step of offering the Teletype 43 IT maintenance but, NOT CHARGING FOR IT.
- The above rates are for 1-year leases. Beyond 1-year, you may keep it or return it. If you keep it, it's MONTH-TO-MONTH. NEVER is a renewal necessary at National Computer.

- Being one of the largest distributors of Data Communications Equipment We:
- a. Have inventories to provide rapid deliveries - YOU DON'T WAIT (in most cases)
- b. Have full service depots in major offices - WE GET IT RUNNING FAST!!!
- c. Offer a full range of terminals, modems, acoustic couplers, peripherals AND full support to go with them.

## Northern Telecom 76 Made SNA-Compatible

MINNEAPOLIS — Northern Telecom, Inc.'s Electronic Office Systems Division has enhanced its Model 76 batch terminal system to include Systems Network Architecture (SNA) compatibility.

The SNA/Multiple Logic Unit (SNA/MLU) emulator handles up to six jobs concurrently on the Model 76 system.

It also supports up to three line printers (225- to 1,250 line/min) and four magnetic tape drives (9-track, 800- or 1,600 bit/in.), as well as a card reader, card punch, diskette and communications up to 19K bit/sec, according to the firm.

The emulator costs \$100 from the firm at Data Park, P.O. Box 1222, Minneapolis, Minn. 55440.

## Tour Shows Need for Switches

(Continued from Page 71)

ly becomes intractable as network complexity grows and the possible failure permutations multiply. Dedicating specific equipment for each failure node becomes quite inefficient (expensive). Each network expansion or addition requires extensive (also expensive) planning and recabling. And then comes the day when an unanticipated failure occurs (so no appro-

priate "B" is available).

What the network manager needs is a general "any-input-to-any-output" connection mechanism he can control remotely: an intelligent electronic switch.

Each switch in the network can be monitored and reconfigured from headquarters. Anticipated failure configurations can be planned and stored off-line. Headquarters personnel can use monitor-

ing features to display and analyze channels from any part of the network.

Pools of duplicate equipment, extra ports and spare channels can be matrix-switched to circumvent network problems. Offline configuration storage and a powerful human interface allow preplanned fallback programming as well as reactive problem solving.

### Second Example

The second example is an innovative banking network. A large, very secure DP center contains several computers and associated front-end processors. Multiplexed modems provide backbone point-to-point links to regional data concentration sites. From the concentrators, a second network tier of multipoint circuits is supported to service interactive banking terminals in the branch banks themselves.

The central site network manager must provide reliable data communications service to the branch banks. This is essentially a point-of-sale application with no communications expertise at the remote sites.

An intelligent electronic switch at the central and concentrator sites provide several degrees of fallback and control to this vital on-line network.

Failure of a concentrator port is counteracted by switching the affected multipoint circuit to a spare concentrator port. Complete failure of a concentrator results in distribution of its multipoint circuits among the spare ports of adjacent concentrators.

Finally, we come to a network with especially expensive (long-distance, wide-band) data links. The intelligent electronic switch at each link junction optimizes utilization. A variety of equipment can be quickly connected over available channels or subchannels.

Kaufman and Tolwinski are engineers at Codex Corp., 20 Cabot Blvd., Mansfield, Mass. 02048.

## At Waterloo, Intel's FAST-3805 won.

**The FAST-3805 saves the University of Waterloo thousands of dollars each month while it increases both user and system productivity. Waterloo's Associate Director-Systems, Romney White, explains how . . .**

"Compared to any other DASD, the FAST-3805 in Native Mode\* is the fastest thing going. It has a large enough capacity to satisfy the biggest users around, and it's a cost-effective solution. In other words, the FAST-3805 is really an ideal paging device.

"The FAST-3805 reduces paging overhead and increases paging capacity. It's an economical solution for extending current CPU resources."

### Increases productivity

"We discovered that our 4341 by itself supported only 25 active users. With the FAST-3805 we

were able to double the number of active users at less than half the cost of a new processor. And those users got more consistent and faster response times.

"We found the FAST-3805 eliminated page wait and the page wait that masquerades as I/O wait, as well as reduced device, controller and channel contention. The result was more users who are more satisfied."

### Fast paging saves dollars

"On our 3031 we had a page wait of about three percent with two 2305s. However, when we switched to a FAST-3805—which

brought in pages about two and a half times faster than the 2305s—the page wait went to zero. In our situation, switching to the FAST-3805 saved us a couple of thousand dollars a month in system and people time. But a user who has a 3033 with a 15 percent page wait could save \$15,000 to \$20,000 a month.

"Not only did the FAST-3805 take the place of two 2305s and a 2835 controller at Waterloo, but it helped us avoid the purchase of another 2305/2835 system. With the FAST-3805's increased capacity, we were able to stay within our budget . . . and still meet the increased needs of our users.

"Because we wanted to get the most out of our current system, we saw the FAST-3805 as a good investment. We looked at the available paging devices and determined that the FAST-3805, because of its micro-coding, offered the most flexibility.

"The installation was a breeze. Service has been good—and the unit is essentially self-diagnosing. The FAST-3805 is much more reliable than our previous disks.

"In summary, Waterloo got more capacity, better performance and better reliability for less money with Intel's FAST-3805 semiconductor disk."

If you are interested in learning how the FAST-3805 can unleash your system resources and increase your personnel and system productivity, contact Intel's Marketing Information Office at 512/258-5171. Or clip and mail the coupon below.

# Rapid Transmit Authorities.

**TI's Portable Models 785 and 787 Data Terminals are experts on interactive communications.**

With TI's *Silent 700\** Models 785 and 787 Portable Data Terminals, you can put state-of-the-art technology right at the heart of your business. Featuring TI's unique dual-matrix thermal printhead, these innovative data terminals can minimize your communications costs with speedy 120 characters-per-second printing. Weighing only 17 pounds each, the portable 785 and 787 can improve your application efficiency, wherever your work takes you.

The Model 785 Portable Data Terminal combines speed with remote access capabilities. With the 785's built-in 300/1200-bps acoustic coupler, users are able to transmit and receive data using a standard phone and electrical outlet. Other standard features include automatic modem selection and com-

patible speed selection to let you optimize your on-line communication time.

The Model 787 Portable Communications Data Terminal can handle your application needs with its cost-saving, built-in standard features. The 300/1200-bps direct-connect internal modem allows users to plug directly into a standard telephone data jack for greater communications flexibility. The 787 also features memory dialing and originate/automatic answer operations for additional time and cost savings.

For information retrieval, remote sales order entry, and a variety of other interactive applications, the Models 785 and 787 speed your communications from coast to coast.

TI is dedicated to producing quality, innovative products like the

Models 785 and 787 Portable Data Terminals. And TI's hundreds of thousands of data terminals shipped worldwide are backed by the technology and reliability that come from 50 years of experience.

Supporting TI's data terminals is the technical expertise of our worldwide organization of factory-trained sales and service representatives, and TI-CARE†, our nationwide automated service dispatching and field service management information system.

If you would like more information on the Models 785 and 787 Portable Data Terminals, contact the TI sales office nearest you or write Texas Instruments Incorporated, P.O. Box 1444, M/S 7884, Houston, Texas 77001 or phone (713) 373-1050.

## Phoenix Digital Unveils Network Control Modules

PHOENIX — Phoenix Digital Corp. has announced the NCM-6809 and NCM-6809<sup>2</sup> series network control modules that can be used with the firm's high-speed multiprotocol synchronous communications port.

The modules support IBM's Synchronous Data Link Control (SDLC), High-level Data Link Control (HDLC) and Digital Data Communications Message Protocol (DDCMP) protocols. They can be used as stand-alone minicomputers or as communications controllers connected with other NCM-6809/6809<sup>2</sup> modules via a high-speed synchronous communications port to form a distributed network, the vendor said.

## Unit Aimed At Graphics

ATLANTA — A color graphics CRT terminal, featuring a 1,920-char. alphanumeric character display in a 24-line by 80-column format with 720 by 288 graphics resolution, has been announced by Colorgraphic Communications Corp.

The MVI-7 has a detachable 87-key keyboard and standard video features include blink, highlight, foreground and background color and underscore, the company claimed.

The standard emulation package includes Digital Equipment Corp. VT100 and VT52, IBM 3101, Hazeltine Corp. 1500 and Lear Siegler, Inc. ADM3 and Adds, with selectable rates of 100- to 19,200 bit/sec, the vendor said.

The MVI-7 is priced at \$3,500 from Colorgraphic Communications Corp., 2379 John Glenn Drive, Atlanta, Ga. 30341.

## Users' Guide Covers Security

HAGERSTOWN, Md. — Marketing Consultants International, Inc. is offering a users' guide on voice and data communications security.

Formerly available only to government agencies, the directory, entitled *Who, What and Where in Communications Security*, provides a discussion of the problems of communications security.

The publication is written for the nontechnical user and is said to help explain complex issues.

The guide costs \$175, \$200 including postage, from the vendor at Suite 214, 100 W. Washington St., Hagerstown, Md. 21740.

Both the NCM-6809 and the NCM-6809<sup>2</sup> offer a CPU, a multiprotocol high-speed synchronous communications port, an RS-232C communications port, direct memory access capability, power-on restart circuitry, system clock and timing circuitry, the vendor said.

Prices start at \$895, the vendor said from 2315 N. 35 Ave., Phoenix, Ariz. 85009.

## Data Recorder Bows Bit-Error Rate Tester Debuts

LINCOLN, R.I. — International Data Sciences, Inc. is offering a bit-error rate tester and a data recorder.

The Model 65/60 bit-error rate tester is a miniaturized modem test set capable of performing tests on synchronous and asynchronous data communications channels. Combined with the vendor's Model 60 breakout panel, it is known as the "Red Box".

The tester contains separate transmitter and receiver sections, allowing full-duplex tests to be performed in either end-to-end or loopback configurations.

It costs \$915, the vendor said.

The Model 7000 Datatape provides nonvolatile mass storage for digital data associated with RS 232C and V.24 communications interfaces.

The product records transmit data, receive data and seven control signals. Operation is independent of data code, line protocol, code level and parity for synchronous and asynchronous data links, according to the vendor.

It costs \$6,050 from International Data Sciences at 7 Wellington Road, Lincoln, R.I. 02865.

We've got a new, flexible, easy to use modem. Lease it from General Electric today.

General Electric's broad line of data communication equipment now includes Racal-Vadic's revolutionary new Modemphone now available for lease. It looks just like a standard rotary or tone telephone, but has a built-in 103/113 compatible 0 to 300 bps full duplex modem that's completely invisible. It is FCC-registered for direct connect and is full originate/answer, too.

All you do is plug the terminal cable into the Modemphone's RS232C connector, plug the 8-foot switched network cable into the voice or data jack, and start communicating. There's no need for separate modem and associated wiring that increases your set-up time. Optional automatic answer is also available.

When you lease any data communication equipment from General Electric — modems,

teleprinters, line printers, portable printers, CRT's, acoustic couplers, concentrators, intelligent terminals and more—you get full GE service support from more than 60 locations, nationwide. We analyze, lease, deliver, install, answer your call, maintain, stock, and repair.

If you aim to keep up with the best, let's get communicating today.

## The New Standard For PDP-11 Disk System Technology

**Check with us before you buy,  
because we can beat  
all prices!**

**Know All  
the Hidden Costs**

### Only System Designed Just for PDP-11 Family

Designed exclusively for DEC's UNIBUS or MASSBUS CPU's. On the UNIBUS, it's just one card that plugs into any spare SPC slot. On the MASSBUS, four cards plug into any spare existing RH70 standard back plane.

### Same Disk Drive as DEC RM02-03, RP06 and RM04-05

We use the same disk manufacturers as does DEC. The RM02-03 is the 9762 CDC 80MB and the new RM04-05 300MB is the CDC 9766. Only the LOGO is different.

### Transparent to All DEC Software, Diagnostics and Drivers

You bet! Use your existing Software... no change needed. Runs all DEC's Diagnostics plus has its own. Fully emulates DEC disk Drivers.

### Worldwide Installation and Maintenance

Through Data Systems Services, maintenance and installation is provided via CDC for both Drive and Controller. We also offer full PDP-11 system support.

### Full Media Compatible?

That's right! You can read or write on our drives. Put it on DEC's and it will play or vice versa. TRULY MEDIA COMPATIBLE.

DRM02-3 80MB Slave	DRP06 200MB Slave
DRJM02 80MB + Controller	DRWP06 200MB + Controller
DRWM03 80MB + Controller	DTU45
DRJM04-5 300MB Slave	DTU77
DRJM04 300MB + Controller	DTU125
DRWM05 300MB + Controller	Line Printers
RJM07 600MB + Controller	Memories

## Communications Processor Performs Print Buffering

HICKORY, N.C. — A communications processor containing a single-board microcomputer and 16K bytes of random-access memory (RAM), which performs print buffering similar to the effect generated by a software printer spooler, is being offered by Carolina Business Computers, Inc.

Called "Our Blue Box," the unit can be connected between the user's RS-232C Ascii asynchronous output port and the printer's RS-232C input port, the vendor said.

It buffers up to 16,000 characters of transmitted data from the computer

at up to 9,600 bit/sec, while simultaneously transmitting the data to the printer, also at up to 9,600 bit/sec. Input/output bit/sec rates are jumper-selectable and both positive and negative handshake levels are available on the standard 25-pin D connectors.

Originally intended to provide compatibility between Data General Corp. computers and non-DG printers, the device can work with most micros and minicomputers, the firm said. Our Blue Box costs \$595 from the firm at Oakwood Center, 350 Third Ave., NW, Hickory, N.C. 28601.

## Microm Tool Links Apple Users To TWX, Telex, Western Union

BOSTON — Microm, Inc. has developed software designed to provide electronic mail and communications lines for Western Union, TWX and Telex to Apple Computer Corp. Apple II users.

Micro-Courier allows users to transmit charts, graphs, correspondence, Visicalc reports and entire programs to other Apple computers over standard phone lines.

The transmissions can be sent auto-

matically, allowing the user to take advantage of low night rates, according to the vendor.

Micro-Telegram allows users to access Western Union Service worldwide. Besides sending telegrams, Apple owners can send and receive TWX, Telex and international cables, the vendor said.

The software licenses for \$250 each, Microm said from 89 State St., Boston, Mass. 02109.

## T-Bar Uses Switching Technology In 256 by 256 Large-Scale Matrix

WILTON, Conn. — T-Bar, Inc. has introduced what it calls the industry's first available large-scale matrix (as large as 256 by 256) using switching technology to provide transparent, nonblocking switching for use in configuration, monitor and test requirements.

In operation, the Virtual Switch Matrix (VSM) is comparable to the equivalent of more than 65,000 16-line switches, the firm said. A user may instantaneously connect any data terminal equipment port to any data communications equipment port in a network.

No master clocking requirements

are needed, the firm said. Because the VSM is transparent, it can handle a random mix of synchronous and asynchronous data without a clock.

It requires reduced space requirements and can switch all 16 major EIA circuits for each data line.

The matrix provides up to 10 monitor outputs and 10 DCE and 10 DTE test ports. Additionally, it requires no programming or predefined individual ports.

Depending on the number of data lines switched, the cost for the VSM ranges from \$100,000 to \$350,000. T-Bar is at 141 Danbury Road, Wilton, Conn. 06897.

## DCC Updates Unique Systems Line

MEMPHIS, Tenn. — Data Communications Corp. (DCC) has announced two software enhancements to its Unique product line of minicomputer-based DP systems.

Interactive protocol emulators for Burroughs Corp. TD-830 and Sperry Univac UTS-400 networks are said to give users of those mainframes economical remote-processing capabilities similar to 3270-emulator operations in IBM networks.

The Unique family of stand-alone and distributed processing systems — based on Data General Corp. computers — allows concurrent multiuser operations including data collection, transaction processing, data base inquiry, word processing and 3270 emulation with local format storage capability.

Multiuser turnkey hardware/software systems begin at \$50,000; Unique software for existing DG installations ranges from \$2,000 to

\$50,000. The Burroughs TD-830 and UTS-400 emulators are available in 60 days.

Either enhancement will add \$6,000 to the price of a DCC Unique system.

DCC is headquartered at 3000 Directors Row, Memphis, Tenn. 38131.

## Emtrol Offers Modems for Micros

LANCASTER, Pa. — A direct-connect modem for microcomputers with or without a disk and featuring originate/answer, programmable word length, parity, number of stop bits and full and half duplex has been announced by Emtrol Systems, Inc.

Covered by a one-year warranty, the Lynx is priced at \$289.

Emtrol Systems, Inc. is headquartered at 123 Locust St., Lancaster, Pa. 17602.

## Offers File Management Inforex Rebounds With DDP System

BURLINGTON, Mass. — Inforex, Inc. last week introduced a distributed data processing (DDP) system that it said combines traditional DDP functions with file management, data entry and multiuser Cobol facilities.

The System 9000 is based on the company's distributed information processing concept and supports the firm's Infobase data management, Universal Data Entry (UDE) and Ultratnet networking system software. System hardware includes a processor with 248K bytes of memory, up to 180M bytes of disk storage and an optional nine-track magnetic tape drive.

However, the computer is designed in a "building block" mode, which allows it to be expanded to fit user applications.

The System 9000 is reportedly the first computer unveiled by Inforex since the firm reorganized its activities under Chapter 11 of the bankruptcy laws last year and was subsequently merged with Datapoint Corp. [CW, June 23].

One of the DDP system's main features is that users can begin entering, accessing and manipulating data, and then generate reports almost the moment the system is plugged in,

The System 9000 Distributed Information Processing System

a spokeswoman claimed. This is possible because the computer's data entry and data management software is already programmed and requires no addi-

tional user commands.

Users interact with the system through Inforex's Universal Workstation, a multifunction terminal designed to take ad-

vantage of the processor's data entry and report generation capabilities, the spokeswoman noted.

The workstation features a software-defined typewriter-style and keypunch-style keyboard. It also has internal diagnostics capabilities for trouble-shooting and repair.

### Focus Is Software

The heart and soul of the system is its software, which is made up of three major portions: Infobase, UDE and the Multiuser Cobol.

Infobase reportedly guides the user through file creation in a question-and-answer format. As the user answers each formatting question, the software creates files and identifies access keys. Application programs are generated as needed and automatically handle such things as page breaks, report and column headings and printing.

UDE, which supports both source- and volume-level data entry applications, prompts operators through each data entry step. Errors are reportedly indicated immediately and the software's editing and verification routines check each record in the user's file.

The system is geared to handle large batches of data entry material, while providing supervisors with operator entry statistics, the spokeswoman said.

With the Multiuser Cobol, users can write programs while data entry, file access, data reporting and communications are in progress, she added.

(Continued on Page 78)

## Doubles Speed, Capacity

## Pertec 3600 Replaces 1800 System

LOS ANGELES — Pertec Computer Corp. has announced the Pertec 3600, a distributed data entry/clustering processing system that replaces Pertec's 1800 system.

The 3600 doubles both the speed and the capacity of the 1800, the vendor said, and features multipoint communications, Winchester disk storage of up to 320M bytes and a processor with 500-nsec access time and 512K bytes of main memory.

The system functions simultaneously as an intelligent remote terminal, an on-line inquiry response system or a

stand-alone, multistation, clustered data processing system, the vendor said.

The system's four communications ports were reportedly designed to accommodate large-volume simultaneous operations with as many as four mainframes. The 3600 uses IBM 3270 emulation and can retrieve information that may not be available in a local data base. This feature makes available more information without storing centralized files at each site, the vendor said.

The 3600 costs between \$158,000 and \$210,000 including training, maintenance and

installation, the vendor said from 12910 Culver Blvd., Los Angeles, Calif. 90066.

## I/O Subsystem for Cray-1/S Gains More Buffer Storage

MENDOTA HEIGHTS, Minn. — Cray Research, Inc. has enhanced the I/O subsystem for its Cray-1/S line of processors with up to 64M bytes of buffer storage, dual high-performance data streaming channels and support for on-line magnetic tape.

The I/O subsystem acts as a

data concentrator for input to the Cray-1/S processor. It distributes output from the processor and operates with all front-end processors that interface to the Cray-1/S. The subsystem also controls peripheral devices such as tape and disk drives, the vendor said.

## Xerox Offers Color Printer

EL SEGUNDO, Calif. — Xerox Corp. has announced the 6500 color graphics printer that reportedly combines laser scanning and Xerographic technique to produce full-color prints in a matter of seconds.

Full-color prints can be output at a rate of 3.2 per min. and single-color copies at 9 per min., the vendor said.

The printer is a raster image system that accepts serial computer data and delivers full-color images with a uniform resolution of 100 points per in. Copies have a maximum image width of 6.4 in. and length of 13.75 in., the firm said.

The unit costs \$30,800 from Xerox at 880 Apollo Drive, El Segundo, Calif. 90245.

## Cray-1/S Buffer Storage Increased

(Continued from Page 77)

The I/O subsystem is an integral part of Cray's Model S/1200 through the S/4400 processors. It is composed of two to four I/O processors, buffer storage, disk control units, optional block multiplexer control units, three CRT consoles and a peripheral expander and maintenance peripherals, Cray said.

The I/O processors interconnect with each other and buffer storage. The first required processor, or the master I/O processor, handles communications protocol with other mainframes. It connects with the Cray-1 processor or with one to three front-end processors. It can also connect to maintenance peripherals via an optional Peripheral Expander,

Cray said.

The second required processor, or the buffer I/O processor, controls disk storage and moves data between buffer storage and Cray-1/S main memory. The processor contains one to four DCU-4 disk controllers, each of which independently controls up to four DD-29 disk storage units, each with a capacity of 600M bytes, according to Cray.

### Optional Units

The third and fourth I/O processors are optional. Each may support up to 16 additional disk units or a maximum system capacity of 28.8G bytes. As an alternative, one of the optional processors may contain one to four block multiplexer controllers (BMC-

4), each of which consists of four channels. Controller units for peripheral devices, such as magnetic tape units, may be connected to block multiplexing channels, Cray said.

Software for the I/O subsystem interfaces with the Cray Operating System (COS). Existing software is upward-compatible and user interfaces are fully compatible with all models of the S series.

A kernel operating system resides in each I/O processor. The kernel is the same for all I/O processors and is modified by system parameters during installation. The kernel operating system handles interrupts, controls disk units and other peripherals, supports station and front-end activities, dispatches messages to and from the S series processor, handles interprocessor communications and controls load overlays, Cray said.

### Buffer Memory

The buffer memory is a solid-state secondary storage unit accessible to all I/O processors in the subsystem. It is available in 1M to 8M 64-bit words, and the memory is equipped with single-error correction, double-error detection logic, according to Cray.

Buffer memory can be used as a rapid-access secondary storage unit, and Cray said it is working on software enhancements to support such a facility.

The I/O subsystems cost between \$1.3 million and \$2.9 million. Cray-1/S systems are large-scale statistical processors, often called supercomputers, that perform very fast mathematical calculations.

### Access Through Front End

The system can only be accessed through a front-end processor and Cray currently offers interfaces for IBM 370-era processors operating under the MVS or MVT operating systems, Control Data Corp.'s Cyber 70/170 and 6000/7000 systems operating under the NOS or NOS/BE operating systems.

Interfaces are also available for Amdahl Corp., Honeywell, Inc., Digital Equipment Corp., Data General Corp. and Systems Engineering Laboratories, Inc. processors, the vendor said.

Cray is located at 1440 Northland Drive, Mendota Heights, Minn. 5120.

## Inforex Offers DDP System

(Continued from Page 77)

Finally, the system's Ultraneet networking software makes it possible to expand the 9000 modularly, adding one unit at a time. File management or application processors in the network configuration are treated as independent units joined by a coaxial cable bus. Resources can be added or taken from the bus without disturbing existing applications, the spokeswoman claimed.

A local System 9000 with Ultraneet costs less than \$60,000. Deliveries are scheduled to begin this August, the spokeswoman said from the firm at 186 Middlesex Tnpk., Burlington, Mass. 01803.

# TRUST YOUR PRINTER TO ITS MAKER.

## Repair & Refurbishment, services you can depend on from Dataproducts.

You bought Dataproducts because you wanted the best printers in the business.

Now you can come to that same reliable source to keep your printers on the job.

We'll test your circuit boards on the most advanced automatic testing equipment and return them to factory specifications.

We'll restore any Dataproducts subassembly—even complete machines—to their original form, fit and function. (Ask for quotations for different levels of refurbishment.)

Normal turnaround for repairs is 30 days. Maximum.

Expedite service cuts that in half: two weeks.

Or, you can use our 48-hour top priority service.

Send your printers to the people who have the technical know-how, the experience, and the parts to do the job right.

The Dataproducts people are there for the life of your printers.

### TO: Dataproducts Corporation

# Now, unleash the true power of your 4300-type processor.

When you chose a new 4300-type processor, it was to upgrade system performance and reduce ownership costs. Yet, if you select the wrong tape subsystem—a subsystem whose performance is not “balanced” with that of your processor—you can actually strangle throughput and reduce system efficiency. On the other hand, if you choose STC’s new 4500 tape subsystem, you can achieve a balanced system, and get all the throughput and CPU utilization for which you’ve paid.

## A subsystem matched to your processor.

The new STC 4500 is fully compatible with today’s intermediate-sized processors, including IBM 360, 370 and 4300 series devices, as well as other comparable units. But more importantly, the STC 4500 incorporates speeds of 75 and 125 ips, and densities of 800 bpi (NRZI), 1600 bpi (PE) and 6250 bpi (GCR). This combination of high-speed and high-density permits the 4500 subsystem to deliver performance equal to that of your CPU, to help achieve a balanced system.

For example, if you compare an STC 4500 with today’s streaming tape devices, there’s no comparison at all. In data mode, a streaming tape will typically transfer data at a rate of about 20 kb per second, while the STC 4500 offers a data rate of 468 or 780 kb per second. When you use the STC 4500 to backup a high-

performance disk, it outperforms 8809-type devices (see chart below) by a factor of six to one. If you consider total time, this expands to a differential of eight to one, and with 3410 subsystems, the difference is almost nine to one. In sum, the STC 4500 makes frequent disk backup a realistic and cost-efficient alternative—no matter your workload—and at your convenience.

Equally important, the 4500 subsystem also offers enhanced read/write reliability. Users who move from non-STC 1600 bpi (PE) to STC 6250 bpi drives and who take advantage of GCR blocking can reasonably expect an increase in megabytes processed per soft failure of 30 to 35 times that of PE, and an increase in gigabytes processed per hard failure of 18 to 20 times.

## Reduced ownership costs.

Older, 3420-type tape subsystems deliver good performance in certain applications. But their price/performance ratio falls far short of that which you’d expect with a 4300-based system. In comparison, the STC 4500—like a 4300 processor—was designed for use in any office environment. As you can see from the accompanying chart, this means a reduction

of 40% or more in space, power, and air conditioning costs, and eliminates the need for raised flooring entirely. And in this age of spiraling inflation, this can be an important long-term consideration indeed.

## SPACE/POWER/AIR CONDITIONING

	3803-2 2 3420-6	4550 4554	SAVINGS
POWER (Avg. KVA)	5.12	3.06	40%
BTU/HR (Avg.)	14,980	9,197	40%
SPACE (Sq. Ft.)	18.4	11.3	40%

## Features you get only from STC.

The new STC 4500 also gives you several important features you’ll find on no other comparable subsystem.

For one thing, the 4500 is a tri-density subsystem. Thus, it eliminates the need for a separate, additional 800 bpi drive. This helps reduce your initial investment, as well as your total cost-of-ownership.

STC’s new 4500 tape subsystem can be diagnosed either on-site or remotely. In either event, if one 4500 drive goes down, it can be diagnosed in-line, and

serviced off-line without affecting the remainder of the subsystem’s operations. Powerful, built-in diagnostics also help assure enhanced data availability. In fact, the STC 4500 has microprocessor-based diagnostics designed to make fault isolation faster and more effective by permitting the subsystem to be exercised in-line. And special “wake-up” diagnostics will exercise the memory, microprocessor, and interface at power-up to assure proper operation.

## Proven STC technology.

The STC 4500 was designed around technology that has been tested and proved in some of America’s largest, and most demanding, data processing shops. In fact, STC is far and away the world’s largest supplier of high-performance tape subsystems for the big processor market. And in the 4500 tape subsystem, we’ve made all this experience and expertise available to the intermediate system user.

## Call now.

Find out for yourself how an STC 4500 tape subsystem can help you achieve a balanced system, reduced cost-of-ownership, new configuration flexibilities and an enhanced level of reliability. For more details, simply call your local STC sales office. Or call us in Colorado at (303) 673-4063. Storage Technology Corporation, MD-3M, 2270 So. 88th Street, Louisville, CO 80027.

## HIGH PERFORMANCE FOR BACKUP/RESTORE

To Backup/Restore a 3370 (571 MB fixed)

	NUMBER OF REELS	REWIND TIME	OPR. TIME	PRICE TIME	TOTAL TIME
IBM 3411/10	19	38 Min.	57 Min.	176 Min.	271 Min.
IBM 5609	24*	62 Min.	72 Min.	117 Min.	251 Min.
STC 4530 (75 ips)	4	4 Min.	4 Min.	24 Min.	32 Min.

\*Cap size equals 1.2 inches.

Disk drive.

4300-type processor.

Entire contents of 3370-type disk can be stored on four reels vs. the 24 reels required by streaming tapes.

Automatic threading, power rewind and hub prevent tape contamination and reduce labor costs.

All speeds and densities can be easily upgraded right in the field.

Radial attachment permits a 4500 drive to be switched off-line without affecting any other drive.

Built-in operator panel allows many functions to be implemented independently of your CPU.

## Ink Jet Printer Suits Medium-Speed Use

SAN JOSE, Calif. — Anderson Jacobson, Inc. has announced an ink jet printer for medium-speed applications.

Called the AJ650, the printer uses a patented drop-on-demand method for applying ink to the paper in a dot matrix. Character width and spacing are variable and can be switched from a standard 80 char./line to a compressed 132 char./line format with single or double spacing, at six or eight line/in., the vendor said.

### Character Types

Under processor control, the printer will print extended, boldface, upper- and lowercase characters.

The unit features bidirectional printing at a rate of 180- or 210 char./sec, yielding a communications throughput rate of 1,200 bit/sec, according to the vendor.

The AJ650 prints an 86-char. ASCII set by selectively

ejecting ink drops from a seven-nozzle print head as it moves across the page. Characters are approximately .1 in. high with seven vertical and five horizontal dot positions per character, the vendor said.

### No Impacting Parts

The unit does not have impacting, mechanical parts, nor does it use a ribbon or ink pump, the vendor said. A disposable ink cartridge supplies ink to the print head using a pressure regulation system that flows enough ink to the print head to replenish ink that is jetted on an electrical pulse from each of seven independently controlled ink chambers.

A microprocessor controls communications between the processor and the printer as well as all printer functions. This makes it possible to interface with most operating systems, the vendor said.

Customer deliveries are scheduled to begin in June. The AJ650 costs \$3,500 or \$150/mo on a 12-mo lease, the vendor said from 521 Charcot Ave., San Jose, Calif. 95131.

## Transport Designed To Stream

MINNEAPOLIS — Control Data Corp. has announced a magnetic tape transport that uses data streaming techniques. The transport can be used on CDC and other vendors' systems.

Called the CDC 92180, the unit is the first in a planned family of CDC streaming tape units. It was designed as a backup device for medium-capacity fixed disk drives. It can also be used as a general-purpose tape transport for applications such as transaction data processing, the company said.

### Reel-to-Reel Transport

The CDC 92180 is a formatted, reel-to-reel transport that uses .5-in. magnetic tape with a density of 1,600 bit/in. Information is recorded and read in nine-track phase-encoded format at a speed of 100 in./sec when operated as a streaming device; and 12.5 in./sec in a start/stop mode, the vendor said.

Design of the CDC 92180 tape transport incorporates a short 13-in. tape path, air bearings and distributed edge guides. The unit comes with built-in diagnostic capabilities. In addition, the device was designed so that operators perform routine maintenance functions, CDC said.

Prices start at \$2,760, the vendor said from 8100 S. 34 Ave., Minneapolis, Minn. 55440.

## Syfa Gets Disk Cache

LAS VEGAS — The Commercial Systems Division of Computer Automation, Inc. has announced a disk cache that connects to the firm's Syfa distributed data processing system and reportedly reduces disk access times from a typical 40 msec to about 4 msec.

The disk cache is geared to supplement CA's 32M-, 80M- or 300M-byte disk drives that attach to the Syfa system.

The disk cache costs \$30,000, not including a disk drive, the vendor said from 2181 Dupont Drive, Irvine, Calif. 92713.

'It's a Good Sermon, But I Suggest Fewer Statistics and More Social Comment.'

## Mini Bits

### Array Processor Introduced For DG Nova, Eclipse Units

NEWTON, Mass. — Computer Design and Applications, Inc., has announced an array processor, the MSP-2X, for Data General Corp. minicomputers.

Contained in one 15-in. square circuit board, the MSP-2X plugs directly into an I/O slot of a Nova or Eclipse processor. The MSP-2X performs signal analysis operations at 20- to 50 times the speed of the host alone, the vendor said.

The array processor employs a 24-bit mantissa and an 8-bit exponent in a block floating-point format.

The unit includes a 2K by 24-bit high-speed data memory and an on-board memory table of trigonometric functions.

The unit costs \$5,950, the vendor said from 377 Elliot St., Newton, Mass. 02164.

### Processor Uses Floppy Disks, Micro As Workstation Cluster

ALEXANDRIA, Va. — Datatel Minicomputer Co. has announced The Solution Word Processor that uses a microprocessor and two floppy disk drives as the heart of an administrative workstation cluster.

Each word processor can be interfaced with any Honeywell, Inc. Level 6 Ultimate, Applied Digital Data Systems, Inc. Mentor, Prime Computer, Inc. Information or Microdata Corp. Reality systems.

The system is compatible with the firm's CP/M-based operating system.

The Solution can be configured with one word processing station or it can be expanded to include up to three terminals and 10M bytes of fixed disk storage.

The system costs \$12,900, the vendor said from 3700 Mt. Vernon Ave., Alexandria, Va. 22305.

### High-Speed Printwheel Printers Designed for IBM Displaywriter

FRANKLIN LAKES, N.J. — IBM's Office Products Division has announced that the firm is now shipping high-speed printwheel printers for IBM Displaywriter systems.

Three printers, including two high-speed models, are now available to produce high-quality documents on Displaywriter.

On any of the printers, one document can be printed on a given printer while an operator works on another, and one part of a document can be printed while an operator works on another segment, IBM said.

The IBM printers are available in 40- and 60 char./sec versions. The 40 char./sec printer costs \$3,895 and the 60 char./sec printer costs \$4,275.

## Early Reports on Apple III Describe Micro as Lemon

By Tom Henkel

CW Staff

CUPERTINO, Calif. — The old line about one bad apple spoiling the whole bunch may not be true for Apple Computer, Inc., but its latest processor has created a bushel of headaches for the innovative firm.

Early users of the Apple III have compiled a long list of complaints about the system, and Apple is scrambling to solve the problems before the glowing reputation of the Apple II is tarnished.

The Apple III has been plagued with problems since its announcement last May. Industry analysts say the problems involve just about every facet of the system. There are software problems on existing programs, and other programs — the ones that Apple promised would make the Apple III better than its predecessor, the Apple II — haven't been announced.

Initial users of the problem-plagued system report instances of loose chip sockets that caused chips to slip out during shipment; a faulty clock/calendar chip that forced Apple to offer a \$50 rebate on its first 1,000 installed Apple IIIs; problems in attaching circuit boards; a less-than-adequate cooling system; hard disk problems; and a host of other mechanical problems, according to industry analysts.

Even Apple's president, A.C. Markkula, admits the first 1,000 processors have proved to be less-than-fruitful machines.

But Apple insists it has been feverishly testing the Apple III and has worked enough bugs out of the system to make the first volume deliveries — although months behind schedule.

According to one Apple dealer, who asked not to be identified, Apple is making volume deliveries, and the latest crop of Apple IIIs seem to work much better than the originals. But when the dealer was asked whether there are as many complaints on the latest Apple III shipment, he declined comment.

One prospective Apple III user, who owns and sings the praises of an Apple II, said he was ready to buy the newer Apple III, but he could not find anyone that had a good word for it.

The user said he saw the processor demonstrated on several occasions, and had a series of discussions with contacts within Apple, and "no one had anything good to say," the user said.

But Apple has made an effort to solve the technical problems with the Apple III. Part of this effort has been the dismissal of most employees involved with the Apple III project, including the project director Thomas Whitney. In all, one industry analyst said about 40 Apple employees involved with the project have been let go.

There's also talk of scrapping the Apple III project for a new processor, the Apple IV. Apple was unavailable for comment on that rumor.

## High-Speed Storage Units Offered for VAX-11/780

MAYNARD, Mass. — Digital Equipment Corp. has announced two high-speed, high-density storage peripherals for its VAX-11/780 processor.

The RP07 fixed-media disk drive offers 516M bytes of storage, and the TU78 tape drive can store up to 145M bytes per reel. The disk uses Winchester technology and has a standard transfer rate of 1.3M byte/sec. It offers an optional peak rate of 2.2M byte/sec and is supported under the VAX/VMS operating system.

The RP07 employs nine platters in a sealed recording environment. Four heads per recording arm and two arms per recording surface are used. The disk bit density is 11,139 bit/in. and the track density is 537 track/in. The unit has an average seek time of 23 msec and an average access time of 31.3 msec, the vendor said.

The RP07, consisting of a disk drive and

controller costs \$48,000. Up to seven disk drives can be attached to a single controller. The drives alone cost \$38,000 each.

The TU78 uses group coded recording (GCR) and phase encoding (PE) techniques. The unit also features dual-density recording in the industry-compatible Ansi standard. Data reels can be transferred between VAX-11/780 systems and those from other manufacturers, DEC said.

The TU78 has a peak transfer rate of 781K byte/sec in a GCR mode. The GCR mode yields a three-to-one capacity improvement over PE recording. Recording density of GCR is 6,250 bit/in. and the read/write speed of the TU78 is 125 in./sec.

The TU78 including a controller and formater costs \$52,000. Additional drives cost \$25,500, the vendor said.

DEC is located at 146 Main St., Maynard, Mass. 01754.

## Desktop System Uses Hard Disk

HORSHAM, Pa. — Digilog Business Systems, Inc. has announced a business computer system that integrates 5M bytes of hard disk storage into a Z80-based desktop processor.

The System 1500 includes a 24-line by 80-col. CRT, keyboard, Z80A-based processor and a floppy disk backup drive.

The unit also features a 5M-byte Winchester disk drive and 64K bytes of random-access memory (RAM). The CP/M operating system and accounting and word processing applications are also available without additional program-

ming, the vendor said.

A basic configuration including 32K bytes of RAM, a 5M-byte Winchester disk drive, a 700K-byte minidiskette drive, a Z80A processor, a 12-in. CRT display, an RS-232 serial communications I/O port, a parallel printer interface, an S-100 bus adapter and CP/M operating system costs \$9,995.

Options include 16K bytes of additional memory, \$215, an auxiliary RS-232 I/O port, \$350, and a dual-auxiliary RS-232 I/O port, \$450, the vendor said from Babylon Road, Horsham, Pa. 19044.

## Southern Systems Unveils Redundant Printing System

FORT LAUDERDALE, Fla. — Southern Systems, Inc. is offering a redundant printer system designed for users requiring zero printer downtime.

The PS-10 consists of a primary printer, a lower speed backup printer and a switching mechanism. The switching mechanism can reportedly be connected with the host processor and two print-

ers with either parallel or serial interfacing.

Southern Systems offers various combinations of speeds in the dual-printer systems. For example, a user with a 1,500 line/min printer may install a 900 line/min backup, while a 900 line/min printer user may install a 200 line/min printer, the vendor said.

The Southern Systems backup system is available for Digital Equipment Corp., Data General Corp., Hewlett-Packard Co., Texas Instruments, Inc. and Interdata, Inc. systems, the vendor said.

Systems cost between \$6,000 and \$55,000 from the vendor at 201 N. Federal Highway, Deerfield Beach, Fla. 33441.

## Centronics Offers Band Printer In Two Versions

HUDSON, N.H. — A 600 line/min band printer subsystem said to be plug-compatible with systems made by Digital Equipment Corp., Data General Corp. and IBM has been announced by Centronics Data Computer Corp.

The LP Series printers are available in two versions, a standard pedestal-mounted unit with open paper path and a totally enclosed version to provide office environments with a noise level less than 60 dBA, the vendor said.

The series offers an operator-controlled self-test capability that is switch-actuated at the printer and a choice of 48-, 64-, 96- and 128-char. set bands, the company said.

The LP Series printers are priced from \$7,525 to \$10,400, depending on the system used, from Centronics Data Computer Corp., Hudson, N.H. 03051.

## Add-In Card Fits DEC Units

SANTA CLARA, Calif. — National Semiconductor Corp. has announced a 256K-byte, board-level, add-in memory card that plugs directly into the Digital Equipment Corp. VAX-11/750 and PDP-11/70 MK-11 MOS memory backplane.

The NS 70/75 is fully interchangeable between the PDP-11/70 and the VAX-11/750 without modification, the vendor claimed. The card can be electrically removed from the backplane via an on-line/off-line switch to allow easier maintenance and diagnostics.

The add-in memory costs \$2,250 from the vendor at 2900 Semiconductor Drive, Santa Clara, Calif. 95051.

# Print faster and save money

## Attach your Series/1 to Control Data Band Printers

\*Available in three models: 360, 720 or 1130 lines per minute.

**Speeds workflow**  
Our swing-out gate simplifies paper, ribbon and font changes.

\*Diagnostics and status/fault indicators for faster servicing.

\*No software modifications required.

THIS PRINTING WAS DONE BY CONTROL DATA'S CERTAINTY 450 SERIES BAND PRINTER.

THIS PRINTING WAS DONE BY CONTROL DATA'S CERTAINTY 450 SERIES BAND PRINTER. COMPRESSION

**Up to 40% less paper**  
Our compressed-pitch feature lets you print a full 132 characters on standard 8 1/2 inch paper. Or 198 characters on 14-inch form.

Clean, crisp impressions on one-to six-part forms from 4" to 16.75" wide.

**Made for quiet environments**  
Quiet is already engineered into the printing mechanism and cabinetry.

If you're thinking about a Series/1 system, our Certainty 450 Series Band Printers might make your decision easier.

Of course they're all ready to be attached to the I/O bus of the Series/1 cpu. But we've engineered a lot of customer convenience and versatility into their design to give you a lot more than a basic printer for your money.

Three models to give you a wide range of printing speeds, for example. Up to 1130 lines per minute. And both our 360 and 720 lpm printers have a compressed pitch feature. Besides saving paper, this permits you

to print a full 132 columns on easy-to-file, easy-to-reproduce 8 1/2 x 11" paper.

Because they'll be in more offices than machine rooms, we've human-engineered their design. Our swing-out paper gate simplifies forms loading and ribbon changes. Even print bands can be changed in seconds.

You won't have to worry about service, either. More than 4800 Customer Engineers in our worldwide maintenance organization support our products.

### Available Now

Our Band Printer is ready to help you get optimum performance from your Series/1. For data sheets and more information, call today, toll free. 800/328-3390.

Addressing society's major unmet needs

## As Application Tools Proliferate New Track Urged for Software Vendors

By Marcia Blumenthal  
CW Staff

NEW ORLEANS — As management information system (MIS) departments engage in more long-range planning and as hardware vendors, led by IBM, step up introduction of application development tools, independent software vendors are going to have to change the way they market their products.

That challenge was delivered by Chester R. Mills, president of Marketing and Sales Support, Inc., at the Association of Data

Processing Service Organizations, Inc.'s (Adapso) 54th management conference held here late last month.

### CW At Adapso

MIS departments no longer go through a gradual process of automation — from implementing the simplest accounting appli-

cations to a far-flung distributed processing system. Rather, the velocity of movement in MIS environments is enormous. Users are demanding very early on sophisticated products that can meet their long-term needs, said Mills, who runs a Dallas-based market research and consulting firm. The real-time environment is going to be a way of life, and most DP managers know with real-time systems better planning is necessary.

Users are increasingly taking a long-range view of the DP environments they eventually want in place in their organizations. "Buyers today are much more aware of the software they want and the DP organization that has to be in place to support that environment," Mills maintained. While in the past an organization may have taken seven to eight years to evolve, today's MIS environment can change drastically in two to three years. Mills noted users often go from a DOS to an OS environment in 24 months.

In the past independent software companies have introduced application development products and "enhanced the hell out of them," Mills noted. But that strategy will not work in today's MIS environment. (Continued on Page 86)

## Informatics Making Plans To Offer Hardware

By Robert Batt  
CW West Coast Bureau

BEVERLY HILLS, Calif. — Informatics, Inc., the Los Angeles-based software and systems house, will enter the hardware market, senior executives reported here at the company's annual general meeting.

Walter F. Bauer, Informatics chairman, said the company expects to increase its involvement in hardware/software solutions from a current 1% of total revenues to 30% to 40% by the end of the decade.

"There has been a rapid move of late to hardware/software solutions," Bauer said. "There is a strong user demand for end solutions and people want to buy hardware along with the software. As a result, part of the research and development commitment Informatics is making is integrating hardware with software, a reversal of the traditional role for many firms in the computer industry."

While Informatics would not manufacture hardware equipment itself, Bauer said the company would probably buy major components — peripherals such as floppy disk and printers, assemble them and integrate them into turnkey systems.

"There is a going trend for software and services firms to sell hardware with their program and remote computing capabilities. This is largely the result of the increasing use of mini- and microcomputers and a growing tendency for users to apply their lower cost systems to special dedicated applications. We intend to buy major components from hardware manufactur-

ers, add our software and sell it as a hardware/software solution," Bauer explained. Bauer stressed that this expanded use of minis and micros represented a major force in shifting the relationship between users and vendors. Software and services companies, because they are closer to end-user requirements, were, he claimed, better placed than hardware manufacturers to

## Sales to Soviet Union Drop; China Top Communist Mart

By Jake Kirchner  
CW Washington Bureau

WASHINGTON, D.C. — U.S. computer sales to the Soviet Union dropped sharply in 1980 following the technology trade restrictions imposed by then-President Carter early last year, the International Trade Commission (ITC) reported recently.

In a report to Congress last month, the ITC said China has supplanted the Soviet Union as the major market for U.S. goods and services in the communist world, primarily as a result of the trade embargo and the granting to China of "most favored nation" status.

Since the U.S. and China signed a comprehensive trade agreement in February 1980, two-way trade has more than doubled, the ITC report said, although expected large increases in Chinese orders for

U.S. high-technology items have failed to materialize.

The agency noted a surge in machinery and technology exports to China in 1979 but said Chinese reevaluation of national economic goals has resulted in intensified efforts to build up the country's economic infrastructure before moving ahead with large capital outlays for western technology.

U.S. computer sales to China were small in 1980, amounting to only \$29 million, but, the ITC said, the Chinese "have expressed a particular interest in computers" and sales "are likely to continue to increase despite the current retrenchment in the Chinese economy."

The ITC explained the optimistic outlook for DP sales to China by noting "the more (Continued on Page 92)

## A Simon Legree for Computers

The Beall Channel Switch. Makes computers, peripherals work harder, more effectively. Directs critical on-line services to another CPU when failure occurs. Commands specific peripherals to serve more than one computer. Redirects all CPU signals to give far more flexibility in physical placement of peripherals.

And Beall does all of this less expensively, more reliably and with less opportunity for operator confusion than anyone else.

We make five basic models to provide up to eight switchable interfaces each of which can be logically connected to as many as eight CPUs.

Want to whip up more facts? They're in our new brochure. Write or call for it today.

# Administration to Push Services Trade Overseas

By Jake Kirchner

CW Washington Bureau

WASHINGTON, D.C. — The Reagan administration will work to further international trade by U.S. service industries, a number of which, including data processing and telecommunications, are vital to the American economy, U.S. Special Trade Representative Bill Brock said recently.

"Services trade is the frontier for expansion of export sales," Brock said in releasing a "work program" to facilitate service trade. The program was approved recently by the Cabinet-level Trade Policy Committee.

"Aggressive cultivation of foreign

markets by U.S. service industries is as critical to our economic recovery as is increased export of goods," the trade representative said. Brock's office estimated service industries employ seven of every 10 working Americans and represent up to two-thirds of the U.S. gross national product.

U.S. service industry exports probably exceed \$35 billion a year, Brock's staff said, even though services trade is not covered by the kinds of detailed international trade agreements that address trade in products.

Rectifying that disparity will be a major goal of the U.S. work program on trade in services, according to the program outline.

"At present, no coherent international framework exists for resolving trade problems in services," the trade representative said in an accompanying discussion paper prepared for the Organization for Economic Cooperation and Development (OECD), which has been investigating services trade problems.

"Some services are covered by bilateral agreements covering those services or by multilateral agreements providing for cooperation at the technical level," the discussion paper said.

"For the most part, however, governments must rely on bilateral contacts on a case-by-case basis to resolve individual trade problems."

## Real Limitations

The paper said "there are some real limitations to what can be accomplished without a more organized negotiating process for exchanging commitments."

While "there is relatively open trade in many areas of services... there is also a disturbing trend toward increased restrictiveness in some areas," the paper said. The document went on to note OECD work in studying the economic implications of transborder data flows.

Addressing trade barriers, the trade representative's working program said "a number of service industries are considered critical to economic, social and national security goals, and governments have traditionally felt the need to regulate these industries to assure broad societal goals."

"These goals can also be used, however, as a shield for protectionist ends, and it is a legitimate purpose of trade policy to seek to minimize such abuses," the work program said.

Explaining the U.S. program, the trade representative said "many U.S. service industries are experiencing major trade problems, both as a result of foreign barriers and as a result of U.S. policies that unduly burden U.S.

exports.

"In recognition of the growing importance of U.S. trade in services and the relative lack of existing mechanisms for dealing with the trade problems in services, trade issues relating to services will be given a high priority in the administration's trade program."

The work program will consist of five components, the government said:

- Full utilization of existing bilateral channels for resolving current services trade problems. "Every effort will be made to deal with pressing current trade problems through bilateral contacts with responsible foreign officials," according to the work program.

- "Where services are covered by bilateral treaties... the government will seek full enforcement of such provisions. Where no existing provisions exist, consultants will take place in the context of the overall bilateral commercial relationship with the country concerned."

- The program document added that "a more satisfactory outcome will require the negotiation of broader and more effective international agreements on trade in services."

- Inclusion of services in the review of U.S. policies that burden U.S. exports. "Some U.S. service industries have indicated that a number of U.S. government policies pose a more formidable barrier to exports than do barriers imposed by foreign governments," the program outline said.

Removing those barriers through amendments to tax, business ethics and antitrust laws and policies will receive special attention from the administration, according to the trade representative.

- Domestic and international preparation for future multilateral negotiations in trade in services. Before international agreements on services trade can be sought, an in-depth analysis of trade barriers in this sector will be necessary, the work program said. The OECD discussion paper was presented to start the analysis process.

- Review of domestic legislative provisions relating to obtaining reciprocity for U.S. services exports. The trade representative noted the work in Congress to achieve international reciprocity in communications services and said the administration will work with Congress to extend that effort to other services sectors.

- Review of the adequacy of U.S. statistics on trade in services.

## Teach your word processor a new trick!

Just imagine if your word processor could communicate with another word processor or terminal over an ordinary telephone line. Or over Western Union's TWX and Telex networks. Imagine the convenience, then let ENVAX make it possible. ENVAX plugs right into your word processor, putting domestic and global communication at your fingertips.

No need to re-key information on a second terminal for transmission. Important documents and mes-

sages are prepared as usual then transferred to ENVAX for automatic transmission.

No need to interrupt word processing operations for incoming messages. ENVAX automatically answers, and records calls in its own memory.

To teach your word processor a new trick and learn how ENVAX can make it the most useful machine in the office, write or call us for more information. What you've imagined will become a reality.

# For Second Consecutive Year Fujitsu Outpaces IBM Japan in Japanese Sales

By Bill Laberis

CW Staff

NEW YORK — For the second consecutive year Fujitsu, Ltd. has topped IBM Japan, Ltd. in computer sales in Japan, capturing an increasing share of that country's domestic market while broadening the sales gap between Japan's two leading computer manufacturers.

Preliminary annual figures show that IBM Japan's sales grew a modest 4.3% in 1980, as the wholly owned subsidiary of IBM Corp. failed to recapture the No. 1 spot it lost to Fujitsu in 1979.

While IBM Japan's export sales grew 20.2% to 69 billion yen (about \$317 million), domestic sales grew less than 1% to 270 billion yen (\$1.24

billion).

On the other hand, Fujitsu's computer sales soared 16% to an estimated 380 billion yen (\$1.7 billion). Although no breakdown of domestic vs. export sales was available, a company spokesman said sales in Japan "probably grew at least 10%."

Over the last five years, Fujitsu's computer sales have grown an average of more than 12%, with last year's 16% growth being the largest in the five-year period.

## Still Leading

"I know IBM (Japan) still enjoys about a 28% or 29% lead in the installed computer base in Japan," Fujitsu spokesman Yuichi Kurita said. "But our sales in Japan

are cutting into that [lead]. Our growth is steady and rapid."

IBM attributed its modest growth in Japanese domestic sales to a relatively high rental- or lease-to-sales ratio. The less than 1% domestic sales growth contrasts sharply with the corporation's 14.5% growth in sales worldwide last year.

"The tendency of IBM Japan's customers to rent or lease, particularly in large systems, continued in 1980," company spokesman Kenneth Sayers said. "But demand (in Japan) remains

very strong, and IBM is rapidly expanding its facilities to meet that demand."

Sayers did not say whether IBM Japan would try to improve sales figures by systematically raising equipment lease prices to induce more outright computer purchases, as the parent corporation did last year in the U.S.

IBM Japan's 20% increase in export sales reflects the "tremendous economic growth

rates in Southeast Asia, which are currently among the strongest in the world," he said.

Meanwhile, Japan's two other computer giants, Hitachi, Ltd. and Nippon Electric Co., are also on the heels of IBM Japan, having increased computer sales last year by 17% and 21% respectively, with each having passed the billion-dollar sales milestone in the same period.

## AMF Sues CA, Alleging Bad Minis

DAYTON, Ohio — AMF, Inc., of White Plains, N.Y., is seeking \$13 million in damages from Computer Automation, Inc. because of allegedly defective minicomputers, according to a suit filed in U.S. district court here.

Damages sought in the complaint are based on claims related to minicomputers shipped from Computer Automation to the AMF ElectroSystems Division in Vandalia, Ohio, during 1977 and 1978.

The complaint seeks \$13,700,000 in damages, including \$10 million in punitive damages or, alternatively, \$10 million in compensatory damages, plus counsel fees and costs.

Computer Automation President, D.H. Methvin, stated the company regards the complaint as being "wholly without merit" and that the firm will "vigorously contest" the action. Methvin declined further comment "until our attorneys have had an opportunity to review the complaint" and file a response.

## Amda Elects Officer Slate

SAN DIEGO — The 1981 annual meeting of the Accounting Machine — Mini-computer Dealers Association (Amda) concluded last month with the election of officers and directors.

Elected were: Ken Wilson, chairman of the board; Bob Burgener, president; Larry Finch, first vice-president; Don Mulvey, second vice-president; Louis Love, treasurer; and Bill Ewell, executive secretary.

Directors elected to serve a three-year term were James Smith, Charles Parsons and Ray Breaux, Amda reported.

# Adapso Mum on New Position Paper on IBM

By Marcia Blumenthal  
CW Staff

NEW ORLEANS — A new position paper on IBM has been approved by the Association of Data Processing Service Organizations, Inc., but the group is keeping it under wraps until it first

shares it with IBM and the U.S. Justice Department.

vious documents in existence since 1972, was made during

## CW at Adapso

Approval for the position paper, which rescinded pre-

the organization's management conference held here recently.

"For those who have traced trends in the industry, the contents of the paper will not be surprising but will be significant," reported Jerome Dreyer, Adapso's president. Adapso intends to circulate the position paper this week.

In another move, the industry-organization approved the formation of a political action committee provided for under federal election laws. This will allow the industry to escalate its visibility in government regulatory activity by permitting Adapso to make contributions to key senators and

congressmen who have an interest in the software and services industry, Dreyer said.

By law, contributions to political campaigns can be made in the name of the trade association but can only be contributed by individual members of those associations.

In other business, Adapso continued its discussion of a possible merger with the Computer & Communications Industry Association. Dreyer said, however, that a decision would not be final for about a year.

## Mills Urges New Track

(Continued from Page 83)

ment, he added. Product and service strategies must be pointed to specialized markets and vendors must know what specific value they are adding to IBM's products and be able to demonstrate that value to users. IBM is now supplying tools, and last year the company introduced 207 pieces of applications development software, Mills said. This new tack shows that IBM is responding to the user's need to develop systems fast.

While IBM may not offer the best products in the marketplace, it does offer users a "warm blanket," Mills suggested, adding that other mainframers are taking the same stand as IBM.

### Reaction to Views

Reaction to Mills' not-too-distant-future view of IBM's impact on the independent software market was met with outspoken opposition. There are other views of the DP environment besides IBM's. Although not denying that response, Mills said the proliferation of software offerings is creating confusion among users who are tempted to run to IBM for a blanket solution. And IBM is now intent on offering that solution, he asserted.

One attendee from National Advance Systems noted his firm had the most difficult time selling to a new IBM DOS user.

While making a strong position for IBM's increased presence in a major portion of the market in which independent software vendors have been dominant, Mills said independent vendors would be able to compete with IBM and other mainframers effectively. However, they must be able to demonstrate the value-added features of their products.

As the MIS organization has become larger, more complex and more prominent in the corporate structure, software vendors will find themselves selling to more people in the organization. One of these will be the MIS specialist, who Mills termed the "technocrat of the organization."

## Preventive Measures Advocated Parties to Lawsuits Finding Courts Expensive

By Marcia Blumenthal  
CW Staff

NEW ORLEANS — Although the number of users suing their hardware equipment and software suppliers is mounting, the parties are finding the court route lengthy and expensive, according to participants at a meeting held here recently

by the Association of Data Processing Service Organizations, Inc. (Adapso).

Rather than allowing cases to drag on, some lawyers specializing in computer law are advocating not only speedier means of resolving disputes, but also preventive measures to avoid litigation altogether.

The newer methods are far more creative than the usual

full-blown lawsuit, suggested Miles Gilburne, a partner

cause the prospect of terminating an existing relation-

from the user's business being heavily structured around the computer system, he said, and until recently the marketplace did not offer a lot of realistic alternatives to the system already in place.

Today's DP managers are in a particularly vulnerable position in the organization.

(Continued on Page 88)

### CW at Adapso

in the law firm of Blanc, Gilburne, Peters, Williams and Johnston.

In the past, users have been reluctant to sue vendors be-

ship with a vendor was horrifying, Gilburne told executives attending the Adapso management conference. This hesitation results

### Arbitration Held Limited

By Marcia Blumenthal  
CW Staff

NEW ORLEANS — Arbitration between a computer user and vendor is one way of avoiding time-consuming lawsuits, but its use has limited creativity.

NCR Corp. has been writing arbitration clauses into its contracts since 1976, Ben Olive, the firm's associate general counsel for commercial legal matters, noted at the recent management conference sponsored here by the Association of Data Processing Service Organizations.

Although arbitration can be a quick, inexpensive means of resolving friction between users and vendors, the arbitrator does not explain how his decision was formulated, Olive explained. Moreover, there is no chance for appeal if the arbitrator errs.

Arbitrators appointed by the American Arbitration Association (AAA) are not investigated or certified by the AAA. They merely apply to become arbitrators, presenting their credentials to the AAA.

Despite the possible drawbacks of the arbitration process, arbitrators tend to be less judgmental than juries, Olive said. The use of the technique is a way of quickly settling disputes in an inexpensive manner, he added, noting that a major cost of litigation is educating lawyers.

If an arbitration clause exists in a contract, the dispute can still be settled in court, but only if both parties agree to proceed with litigation instead of arbitration.

"It has worked perfectly everytime!"

Richard Ruth  
Shippensburg, PA

"I like the thicker protective cover."

David Hendel  
Lititz, PA

"Great! I have had no problems!"

Timothy Roscoe  
Mechanicsburg, PA

"So far my Verbatim disks have been performing flawlessly. Not always so with other disks."

Chris Otis  
Hoffman Estates, IL

"Runs quieter in the disk drive."

Richard Cannova  
Los Angeles, CA

"Verbatim disks are super. They're our standard for quality."

Bob Mills  
Mission, KS

"Anything that prolongs the life of a diskette is a plus. Thank you Verbatim for an excellent improvement."

Steve Toth  
Piscataway, NJ

"Of the 130-plus Verbatim disks I have, I'm not aware of any problems. I'm sure the improvements will give your disks an even longer life."

Gerald Janas  
Warren, MI

"FANTASTIC. Not a single registration problem. Much more reliable than what I had been using."

Gary Sandler  
Playa Del Rey, CA

"Verbatim is much more reliable. I wouldn't trust anything else."

Howard Chin  
Pomona, CA

"Thank you for the improvements. Just another reason why I'll always use Verbatim."

James Hassler  
Cheyenne, WY

We introduced Verbatim Datalife mere months ago. And it's already playing to rave reviews like these.

But don't take anybody else's word for it. Try it yourself, and see if you don't agree it's the best media you've ever tried. For the name of your nearest Verbatim dealer, call (800) 538-1793, in California call (408) 737-7771 collect.

**We play it back, Verbatim!**

# Parties to Lawsuits Finding Courts Expensive

(Continued from Page 87)

They have picked the vendor and negotiated whatever contract exists and, as a result, are accountable, which gives incentive for suits, Gilburne said.

But suits can be disruptive to the firm's business. As an attorney, Gilburne said, he does not want to see litigation disappear entirely, but users and vendors would often be better off if they

worked out potential legal hassles in the contract process.

Today, a great deal of "inarticulate risk" is built into DP contracts, he added. Most contracts do not address specific risks the user faces in purchasing the vendor's equipment or software. When objections to the products eventually arise, vendors often disclaim warranties on the products.

The user has a "magical view" of what the product will do, Gilburne continued. To avoid litigation, vendors should articulate the risks inherent in the product prior to contracting a sale with a user.

The vendor should also be expected to let the user know if the product will function appropriately for a particular user's business by including a detailed set of functional

specifications in the contract.

For example, if users expect a terminal response time of three or four seconds and the vendor determines this is not always possible because there are too many environmental variables to guarantee such a response time, the vendor will be free from liability if he refuses to guarantee this in the contract, he said.

While ambiguity in the

contract has worked to the vendor's advantage in the past, legal suits ensuing from this lack of specificity are very expensive, and creative contract writing is an attractive way of preventing lawsuits, Gilburne urged.

## Consider 'Minitrial'

But what if the user and vendor are already involved in a lawsuit? In this case, they may consider trying what has become known as a "minitrial," noted attorney Ronald L. Olson, a partner in the firm of Munger, Tolles and Rickshauser.

One of the keys to the minitrial — which is really not a trial — is developing a means of getting key executives of the litigants' firms to communicate, something they probably haven't done since the suit was filed, he continued.

The technique was originally used to settle a case involving a patent lawsuit against TRW, Inc. when it tried to enter the automatic credit-checking business, Olson said.

In a minitrial, the parties agree to such constraints as limiting discovery proceedings, waiving rules of evidence and using only one expert witness apiece. Critical to the process is the employment of a neutral party, according to Olson.

After the lawyers plead their case to the chief executives and the third party over a two-day period, the third party states how he feels the court would decide the case and why. The chief executives then go off to discuss the case alone.

In TRW's case, the executives reached an agreement in principle within about half an hour, Olson reported.

The minitrial technique works, he said, because the third party helps to keep the arguments focused on the merits of the case, and the chief executives bring to the proceedings their skills for assessing the risks of outcomes and of negotiating.

"Too often, lawsuits are overly litigated because corporate management walked away from the case and left problems to the lawyers," Olson said.

## Will the auditor love your new structured system as much as you do?

You know that your new system will have to be audited. And that the results of the audit may be unpleasant. But until now, there's been no easy way to learn about what auditors look for in system audits or how to build effective internal controls into your systems right from the start. (Just how do you show audit controls in Data Flow Diagrams, Structure Charts or Pseudocode?)

We can help. Yourdon has the first seminars specifically designed to show you how to plan, document and implement internal controls in your struc-

tured systems. If you design or build systems — or if you have to audit them, these courses can help you to do your job right!

**1. AUDITING STRUCTURED ANALYSIS AND DESIGN WORKSHOP:** A 5-day seminar which teaches both the tools of structured analysis and design and shows how to build in and document proper controls. Next sessions are scheduled for NEW YORK: June 1-5. SAN FRANCISCO: June 22-26. CHICAGO: July 6-10. SAN FRANCISCO: August 10-14.

**2. INTERNAL CONTROLS WORKSHOP:** A 3-day seminar for those familiar with structured analysis and design. An intensive review of the audit and control implications of structured systems development. Next sessions are scheduled for: NEW YORK: June 8-10. BOSTON: July 15-17. LOS ANGELES: August 5-7. NEW YORK: August 26-28.

For detailed course outlines and registration information, call us toll free at 800-223-2452. Canadian and NYS residents call collect at (212) 730-2670.

## Earnings Jump 48%

## Wang Quarterly Revenues Up 54%

LOWELL, Mass. — Wang Laboratories, Inc.'s third fiscal quarter revenues totaled \$212.3 million, a 54% increase from the \$137.9 million reported for last year's third quarter.

Net earnings were \$17,555,000, up 48% from the \$11,883,000 reported last year; per share earnings rose

from 23 cents to 32 cents.

Revenues for the nine months ending March 31 were \$570.5 million, an increase of 60% from the \$357.5 million reported for the similar period last year. Net earnings were \$48,458,000, up 61% from the \$30,060,000 reported last year; per share earnings rose from 58 cents to 86 cents.

For the four fiscal quarters

ending March 31, the firm's revenues were up 62% from \$466.1 million to \$756.2 million. Net earnings increased from \$42,302,000 to \$70,511,000, a 67% increase; per share earnings rose from 83 cents to \$1.26.

In April 1981, the company officially entered the "Fortune 500" list as No. 457, a position based on fiscal 1980 revenues of \$543 million.

## Burroughs Revamps Group

DETROIT — As part of a new marketing tack for the '80s, Burroughs Corp. has restructured its three-year-old OEM Division.

The restructuring is meant to provide greater sales and marketing support for the company's three main OEM product lines: memory products, displays and printers.

As part of the restructuring, the following personnel appointments have been made: Brian Esher, director of mar-

keting; David Tovey, product manager of peripherals and manager of technical support; and Richard Nikiel, product manager of displays and manager of customer services.

In addition, D. Barry Donahue was named manager of national sales, and Myles Frischer was appointed manager of international sales. William McDowell's position as product manager, printers, will be expanded.

## Nickels &amp; Dimes

An eight-year convertible, subordinated, \$1.2 million loan has been received by Evolution Computer Systems Corp. from a consortium headed by the Marwit Capital Corp. of Newport Beach, Calif. The funds will be used to increase Evolution's manufacturing inventories and services.

\$\$\$

**Management Science America, Inc.** has announced a public offering of 1.5 million shares of its common stock at \$16 per share.

\$\$\$

**Microcomputer Systems Corp.** has signed a \$4.5 million loan agreement with the Bank of the West to support continued growth activities.

\$\$\$

The board of directors of **Dicomed Corp.** have declared a three-for-two stock split in the form of a 50% dividend payable May 15 to stockholders of record on May 1.

\$\$\$

**Bolt Beranek and Newman, Inc.'s** shareholders have approved a proposal to increase the authorized stock of the company from 2.5 million shares to 6 million shares and approved a three-for-two stock split.

\$\$\$

## Magnetic bubbles: Packing them in by the millions.

The more magnetic bubbles we can put on a chip, the more attractive this technology becomes as a mass memory. This means an inexpensive, reliable, and nonvolatile alternative for storing large amounts of data in telecommunications and information management systems.

We recently stored 8,798,406 bits in a single experimental chip. This indicates the potential for storing the equivalent of a 600-page novel in an area the size of a postage stamp. We did this by using simple, easily resolved patterns to guide the bubbles. To create these patterns, we implant high-energy ions directly into the magnetic bubble material through a mask. The result: smaller patterns, which permit smaller bubbles, and thus more bubbles per chip than in commercial bubble memories.

We're also studying how to manipulate bubbles by means of two wafer-thin conducting sheets instead of a pair of external coils.

With this technique, we'll be able to cut the overall size of bubble devices by a third, move the bubbles 10 times faster, and also put far more bubbles on a chip than in today's commercial devices.

A group of Bell Labs scientists and engineers working on magnetic bubble technology holds over 150 patents in the field. About half of them have been awarded to Andrew H. Bobeck, a co-holder of the basic patent for the 1966 invention. Among our inventions:

- Magnetic bubble concepts and devices
- Garnet materials for bubble devices
- Method of growing epitaxial garnet films from a supercooled solution
- Basic technology for device manufacture
- Ion implant method of propagating bubbles
- Dual-conductor sheet method of propagating bubbles

In the Bell System, bubble memories are already at work in equipment that provides recorded voice announcements and in systems that administer and test digital networks. Eventually, the memories could be used in electronic switching systems, and in advanced home and business telephones.

Our goal is to make this technology even more economical and versatile for storing data electronically. Ultimately—through our partnership with AT&T, Western Electric and the Bell telephone companies—this translates into better service to Bell System customers.

# Informatics Making Plans to Offer Hardware

(Continued from Page 83) translate those requirements into complementary software and hardware offerings.

"Software, not hardware, is the key element in differentiating between various computer systems. Users want to know their supplier really understands their industry. Programs are increasingly oriented towards certain industries and the user wants

the software tailored to his specific applications," he said.

Bauer cited several ways in which Informatics was attempting to snatch a bigger share of this growing market. Among these was a research and development plan aimed at mini and micro systems.

Informatics, he said, was especially interested in the concept of using micros as

workstations to help get information into and out of large computers. To this end the company was currently testing a workstation, known as Informaticom II, to be used in conjunction with the company's Mark IV product for batch processing.

"We think there is going to be a very big market in workstations. We will sell more software products if we have a workstation to accompany

them, and we believe this project is one of the first entries into this area," he added.

The company said it was also interested in acquiring companies with specialist industry applications to take advantage of the growing need for total systems solutions. Accordingly, its recent acquisition of Transportation Computing Sciences Corp. and its principal subsidiary,

Computer On-line Systems, was a portent of things to come.

Bauer said Informatics' stated intention to acquire Professional Software Systems (PSS) of Phoenix was also very important. PSS supplies minicomputer-based turn-key systems for financial and administrative processing in law firms. "We believe PSS can become the leading supplier for law firm data processing in the U.S.," he said.

Informatics said it also planned to take some of its proprietary software and put it into hardware as chips to produce greater efficiency. This it was now doing with Taps — a newly acquired microcomputer product for screen and data base software.

But despite these innovations, Informatics, the country's sixth largest independent services company, said it had not yet achieved full profitability.

## Slow Climb

First-quarter profits climbed only slowly to reach \$4.46 million, compared with \$4.41 million in the equivalent period last year. Revenues in the first quarter were \$30.9 million, a 6.7% increase over 1980.

Bauer predicted the revenue and profit weakness would continue in the second quarter before picking up later in the year.

The goal was to establish 10% to 15% profit margins in the software and information processing areas of the company and an 8% to 12% margin in professional services. Currently the company is only breaking even in software.

Bauer said that the disappointing profit figures were due, in large part, to pressure applied by the Reagan administration on federal government agencies to curtail their spending.

## Orders & Installations

Docutel Corp. has been awarded a contract by People's Savings Bank of Bridgeport, Conn., for 10 of the company's Total Teller 2300 model automated teller machines.

Computer Sciences Corp. has received a \$4.1 million contract to supply the communications extension of Atlanta's new rapid transit system. The contract from the Metropolitan Atlanta Rapid Transit Authority calls for the company to design, furnish and install the system.

## Add total graphics capability to your computer

Different plotting, and printing applications often require different instruments. At Houston Instrument we're aware of your computer graphics needs. We listen to your evaluation and then recommend the plotter, printer, or plotter/printer that's exactly tailored to your specific application. Nobody else can do it, because nobody has such a broad selection of graphic output devices.

COMPLØT® pen plotters are available in fourteen different models with X-Y plotter sizes of 8½ x 11" (DIN A4) or 11 x 17" (DIN A3) and drum plotter sizes of 11" (28 cm) to 42" (107 cm). Pen speeds range from 240 to 4,000 steps/sec. Prices begin at a low \$1,085.\*

COMPLØT electrostatic plotters and plotter/printers are available with models for printing (up to

2,400 lines per minute), plotting (up to 2" per second), or simultaneous plotting and printing.

COMPLØT electrostatic CRT copiers provide fast, quality hardcopies from Hewlett Packard Series 2640 terminals or Tektronix® 4010 family terminals for just a few cents per copy. Prices for the Houston Instrument electrostatic products range from \$3,950 to \$6,550.\*

Our Model 6000 TISPP (Thermal/Intelligent/Strip/Plotter/Printer) allows superior quality graphics output from either an analog or digital source and provides

the continuity and clarity of a continuous trace with alphanumeric annotations under intelligent control. It's the versatile graphic output device for the new generation of microprocessor controlled instrumentation. Available in one or two pen versions. Prices start at \$1,795.\*

When you think of hardcopy graphics, think of Houston Instrument. We offer you the best selection . . . the Houston way.

Examine our selection yourself by getting complete information and descriptive literature. Contact Houston Instrument, One Houston Square, Austin, Texas 78753, (512) 837-2820. For rush literature requests, outside Texas call toll-free 1-800-531-5205. For technical information ask for operator #5. In Europe contact Houston Instrument, Rochesterlaan 6, 8240 Gistel, Belgium. Phone 059/27-74-45. Telex Bausch 81399.

# New Datapro Directory of Microcomputer Software

The first complete objective directory service for the identification, evaluation and selection of microcomputer software.

- ☐ Over 2,000 software products — detailed descriptions including data on vendor, system requirements, pricing, maintenance, documentation, training, etc. — in a new easy-to-use, easy-to-compare format.
- ☐ Over 1,000 software vendor profiles, including product line, applications emphasis, and sales volume.
- ☐ Four major indices, all generated from a single database:
  - Applications Index: 27 key areas covering commercial, financial, industrial, medical and many others.
  - Product Name Index with abbreviations and acronyms.
  - Vendor/Product Name Index with the name of the vendor who markets each software product.
  - Computer System Index with system name or type, major application categories, and product name.
- ☐ Current price list, updated regularly for hundreds of vendors.
- ☐ Your subscription includes two loose-leaf volumes, 12 monthly supplements (up to 100 pages each), 12 monthly newsletters, and Datapro's popular Telephone Inquiry Service.

See us in  
Booth 1401  
at the National  
Computer Conference

## Take a look at what's in the new directory...

### User's Guide

A concise narrative that quickly familiarizes you with all aspects of the Directory Service, and helps you get even more for your money.

### Applications Index

Helps you locate everything in the service relevant to each of 27 major application areas and several sub-categories within the major areas. Included are:

- Accounting
- Banking and finance
- Computer management aids
- Data communications
- Data and database management
- Education
- Energy management
- Engineering and scientific
- Entertainment
- Facilities security and protection
- Government
- Insurance
- Legal
- Management sciences
- Manufacturing
- Mathematics and statistics
- Media (publishing, broadcasting, etc.)
- Medical and health care
- Payroll and personnel
- Programming language processors
- Programming aids
- Sales and distribution

### System programs

- Transportation
- Utility programs
- Word processing and text editing
- Miscellaneous products

### Product Name Index

Organized by the full name of each software product and also by abbreviations or acronyms, this index points you quickly to the proper page in the software profile section of the service.

### Vendor/Product Index

This index is organized by vendor name. It associates each product profiled in the service with the vendor's name and directs the user to either the product profile page or the vendor profile page, depending on the user's need.

### Computer System Index

Organized by computer name or type of computer system, this index tells you on which each software package will run.

### Software Product Profiles

Over 2,000 uniform, objective and easy-to-read descriptions of individual software packages — plus more arriving with each monthly supplement. Each profile includes:

- Product name and acronym
- Vendor name, address, telephone number and person to contact
- Software developer's name, address

### and telephone number

- Who sells the software in other countries, listed by vendor name and city

### Product description

- Functions
- Capabilities
- Features
- Advantages
- Key Reports Generated
- Industry Suitability

### Host computer systems supported

- Required operating environment
- Minimum and recommended main memory size

Auxiliary storage requirements

Operating system requirements (including version number)

Plus other requirements such as previously installed packages, special peripheral devices, etc.

### Operating mode

- Local batch
- Remote batch
- Real-time transaction-based
- Interactive...and more

### Source language name and availability

- Number of programs in package

### Ownership options

- Purchase
- Lease
- Rent
- License

### Pricing and usage details

- Precise and detailed terms — dollar, usage or time-related terms
- Special terms, including pricing for additional installations

### Maintenance availability

- If different from marketing company, the name, address and telephone number are listed

### Maintenance provisions and pricing

- Optional features and prices

### Custom package modifications

- (pricing and availability)

### Training and installation services

- (pricing and availability)

### Specific documentation

- (pricing and availability)

### Date package first installed

- (or scheduled for installation)

### Number of packages installed to date

### Vendor Profiles

Over 1,000 uniform, easy-to-compare descriptions of companies involved in the design, marketing and servicing of microcomputer software — plus additional profiles with most monthly supplements.

Each profile includes:

- Company name
- Address
- Telephone
- Principal business
- President
- Director of marketing
- Date founded
- Number of employees
- Sales volume
- Primary customers

### Sales concentration

- Product line description

### Vendor Directories

In addition to an alphabetical listing of company names, principal addresses, sales locations, and telephone numbers, the service provides a geographical listing by state and zip code.

### User Ratings of Software Products

This measure of what current users think of their software will greatly assist you in making your evaluation and eventual purchase.

### Feature Reports

In-depth discussions of important topics that help you select, purchase, and use microcomputer software.

### Vendor Listing Forms

Special forms will enable you to make certain appropriate information on your company is included in the service.

### Newsletter

Important monthly news service that will include a "software company of the month," plus color and insight on the industry.

### Inquiry Service

By phone or mail, Datapro analysts are at your service to help with your microcomputer software questions. Convenient mail-in forms are included.

## Datapro Directory of Small Computers

The perfect hardware-oriented companion to the new *Directory of Microcomputer Software* because it helps you...

- ☐ Identify cost-effective computers, peripherals and services by comparing specs and prices.
- ☐ Budget more accurately for your systems needs.
- ☐ Eliminate mistakes in product selection.
- ☐ Make buying decisions on actual user product ratings.

For complete details on the *Datapro Directory of Small Computers*, check the appropriate box in the coupon.

SAVE  
\$50

**datapro**

☐ Please enter my no-risk subscription to *Datapro Directory of Microcomputer Software* at \$290. That's a \$50 savings off the regular subscription price of \$340. I understand you will begin shipping volumes in July and if, for any reason, I am not satisfied with the materials after I receive them, I may return them within 10 days and pay nothing.

# China Now Major Communist Market for U.S.

(Continued from Page 83)

liberal criteria that now apply in granting U.S. licenses to export high-technology goods to China did not become effective until July 1980."

Turning to U.S.-Soviet trade, the ITC reported total American exports declined from \$3.6 billion in 1979 to \$1.5 billion in 1980, a 58% decrease. Most of the remaining sales were in agricultural

commodities, the agency said.

Computer sales in 1980 to the Soviet Union were valued at only \$400,000, a striking downturn from the 1979 figure of \$22.6 million, according to the ITC statistics. Until last year, such sales had shown a steady increase every year since the Nixon administration began U.S. emphasis on detente between the two countries.

Carter imposed the trade ban last January following the Soviet invasion of Afghanistan. Although the concurrent grain embargo was recently lifted by the Reagan administration, high-technology trade is still severely restricted.

"Business contacts between U.S. companies and Soviet officials have largely been maintained," the ITC noted, "but uncertainty about the

trade policy of both governments depressed business activity. It was reported in May that the overall workload of U.S. firms in Moscow had fallen by some 50%."

In a further discussion of the trade restrictions' impact, the ITC said "an increase in Soviet imports from the industrial West during the year [1980] suggests that Western technology continued to be available to the Soviets and

that an undetermined amount of U.S. business has been diverted to West Germany, France and other developed countries."

The restrictions on transfer of important technology to the Soviet Union "caused some disruption in Soviet programs" and "introduced uncertainties" in Soviet economic planning, the ITC added.

The agency also noted U.S. exporters have complained of "inconsistencies" in the government's export license administration. "The entire subject is presently under consideration by the new administration as part of a comprehensive review of the U.S. position concerning the trade sanctions," the ITC report said.

## "I (for once) was speechless."

— Dave Mallory, March, 1981 issue of RSTS PROFESSIONAL

To tell the truth, so are we. We knew DISKIT would amaze RSTS users, but, frankly, we were unprepared for the response. Phone calls, letters, and now the RSTS PROFESSIONAL — all saying what we want you to know:

DISKIT is a remarkable software tool!

Listen to what else Dave has to say:

"...using DISKIT, I created 130 accounts and fully extended their centered UFDs in 3 minutes and 40 seconds (a job that used to take 4 to 8 hours.)"

"I then copied the full contents of a 300 MB RM05 equivalent to this new 'well-structured' disk in 45 minutes, optimizing clustersize and contiguity in the process..."

### DISKIT IS A DISK STRUCTURING UTILITY

As Dave discovered, DISKIT's disk structuring utility, DSU, is fast. It also:

- Optimizes file clustersizes
- Places and pre-extends UFDs
- Performs transfers between unlike disks
- Saves all accounting data
- Allows manual file placement
- Provides full logging and statistics
- Includes sophisticated error handling and recovery

### DISKIT IS A DIRECTORY PROGRAM

But DISKIT is more than a disk structuring utility. DISKIT's Macro-11 directory program, DIR, displays directories 12 times faster than before — looking up files by name, extension, and date (with wildcards) at the incredible rate of 250 files/second.

And DIR is smart. It supports all standard DIRECT switches (including backwards, up to 1,000 files) with features you won't find elsewhere — like password lookup, UFD placement, and UFD size.

DIR even works as a diagnostic tool on dismounted disks, detecting bad directory structures and identifying them with comprehensive error messages.

### DISKIT IS AN OPEN FILES DISPLAY PROGRAM

DISKIT's Macro-11 OPEN program displays open files by job — with complete job and file statistics. It even has a "sleep switch", allowing you to dynamically update information at any desired interval.

### DISKIT LETS YOU WRITE YOUR OWN DISK HANDLING ROUTINES

Best of all, the very same routines used in DISKIT are included, with documentation, so you can write your own disk handling routines. In minutes.

### DISKIT IS THE FIRST SOFTWARE TOOL KIT FOR COMPLETE DISK MANAGEMENT

The DISKIT package provides all the tools and utilities you need to create and manage a well-structured disk. The entire DISKIT package, with extensive documentation is available now for only \$1250.

DISKIT, Dave says, "...is the 'final solution' to structured disks, eliminating all of the time and complexity and reducing the job to one of a SAVRES."

What more could we say?

Once again, we've got the answer.

Software Techniques, Inc.

5242 Katella Avenue, Suite 101,  
Los Alamitos, CA 90720

## Contracts

Kennedy Co., Monrovia, Calif., has received several contracts from firms in India, West Germany and England for Winchester disk drives and backup transports. D.C.M. Dataproducts, New Delhi, India, purchased Kennedy's Model 5305, 70M-byte Winchester disk drives along with models 9100 and 9700 .5-in. tape transports. EWH Elektronik, GmbH of Hamburg, West Germany, has ordered Kennedy's Model 5305 disk drives to be used in its add-on disk systems for the PDP-11 market. Micro Consultants, Ltd., Carterham, England, has purchased Model 5305 Winchester drives and Model 6450 cartridge tape transport systems.

AT&T's Purchased Products Division and Tri-Data have signed a contract that provides an alternative for all Bell operating companies to purchase Tri-Data's telecommunications storage unit.

Northern Telecom, Inc., Electronic Office Systems and RCMC (Europe), B.V., have signed a four-year contract for marketing Northern Telecom distributed data processing products in markets including Europe and North Africa.

# 'No Red Tape' Singapore Eager for International Suppliers

By Hal Glatzer  
Special to CW

Singapore wants to be a "global city" of "top-class telecommunications services, software and manpower resources," according to Frank Y.C. Yung, chairman of the city's telecommunications authority (Telecoms).

Yung said that Singapore has invited "international suppliers who are well placed" to become partners in development projects "with no red tape" that will make the strategic Asian

city-state a "shop window" for marketing.

"Singapore is a business-oriented community," he said in a recent interview. S.M. Sung, Telecoms' director of corporate planning, said that France's CITI, Japan's Nippon Electric Co. and Fujitsu, Ltd. and other transnational corporations are among the manufacturers Singapore has "spoken with" about such joint projects as an electronically erasable paper, which could hasten the acceptance of

videotex, facsimile and computer graphics.

But not all Asian, Pacific basin or Latin American nations are as prepared to leap into an international electronic future. Singapore is already a cosmopolitan seaport sheltering banks and other gigantic institutions whose need for transborder data flow and other services collectively called informatics is unquestioned.

Across the China Sea in the Philippines, "We want the multinational corporations to generate money for our own further development," Nestor A. Virata, vice-president for corporate planning in the Philippines Long Distance Telephone Co., said. He added that only "new construction outside Manila will decongest and control pollution" in the capital city.

Connecting new towns, he said, will require microwave networks and satellite earth stations built to withstand the island's frequent typhoons. Fewer than two telephones serve each 100 people, he admitted, noting that the urban average is higher and "sufficient for international needs," but better domestic service — especially direct distance dialing — will require computerized switching from a central facility.

With government subsidies, that facility will serve as a data network, too, "connecting political leaders" and "monitoring the progress of our roads and other development projects."

## Chilean Net

Chile, a long, narrow country whose population clusters in the middle, sees trade-offs against transportation. "It is the best way we can reduce the physical distance along the 4,000 kilometers of the country and seaward to Easter Island," said Julio Polloni, undersecretary of telecommunications. With the "most modern technology possible," Chile will complete a network based on terrestrial microwave towers down the continent and into the fragmented islands of the South, and with high frequency (HF) radio to reach into the Pacific. "Our goal is to bring the average telephone penetration up from two to 13 per 100 people, and to offer direct distance dialing from 12, instead of four cities," Polloni said.

The Cook Islands hold the distinction of having the greatest sea-to-land ratio of any nation on earth. Fifteen islands totaling barely 200 square kilometers dot the southern Pacific; half of their

20,000 people live on only one 17-kilometer island, and nearly as many more of their countrymen live thousands of miles away in New Zealand. A cable connects the two countries.

Stuart Kingan, his government's science adviser, said flatly that only HF radio can reach all the islands, no two of which are within sight of each other. "The government developed HF links free of charge to the public, powered by solar cells that have paid for themselves in less than one year, compared to gasoline generators, and also provide fluorescent lighting," he said.

"The common carriers and telecommunications authorities don't like it, but I don't think we've done them out of any money. You have to value communications by what it achieves, not by what it costs," he added.

Peacesat, the free use of the National Aeronautics and Space Administration's 14-year-old ATS-1 satellite (eight years beyond its design life!), gave the Cook Islands a model for its HF network traffic: medical services, agricultural information, continuing education and trade reports. "Telecommunication pays in

# The Zenith Smart Terminal.

## Compare the features.

Reverse video by character can be used to emphasize words, lines, phrases or paragraphs.

High Resolution CRT reduces eye strain and operator fatigue.

Z80 Microprocessor-control brings easy editing, cursor flexibility and reverse video highlighting to your on-line system.

Professional touch keyboard follows standard typewriter layout with 72 keys, including 12 special function keys, (8 user programmable) plus 12 key numeric pad.

Underline or reverse video blinking cursor is addressable to allow you to edit or correct on the entire screen.

Insert and delete character features allow easy correction or modification of displayed information.

80 character by 24 line format, plus a 25th line for operator messages and prompts.

Cursor and special functions are accessible by keyboard or outside computer.

Displays complete ASCII character set including upper case, lower case with descenders and special graphic symbols.

Professional appearance and compact size looks and fits well in any location.

## Then compare the price.

For under \$1000,\* the Zenith Z19 smart terminal is a very smart buy. It can be utilized with almost all commonly available computer systems and provides the most advantageous features for data entry, editing, inquiry, and transaction processing—wherever you need a top-of-the-line, general-purpose terminal.

The Z19 is ideal for high speed data entry. The 12" diagonal CRT gives you a crisp, clear video image. And the Z19's keyboard follows the standard typewriter keyboard layout for operator ease. Along with this you get ANSI and DEC®-VT52 compatibility. And one other

DEC is a registered trademark of Digital Equipment Company.

important plus: Quality you can depend on, because it's Zenith.

For more information about the Z19 video display terminal, send us the coupon. For fast information, call 800-331-1750, Operator 36, toll free. In Oklahoma call 800-722-3600, Operator 36.

## Oh, the joys of being a dp professional.

Every job has its share of problems, but dp professionals seem to have been blessed with more than their fair share.

And the biggest curse of all has to be software that causes nothing but problems, when it was supposed to be the solution.

We understand the frustrations, the irritations, the agonies of runs gone awry.

For years, we, as users ourselves, shared your joys: the pleasure of hearing hardware vendors insist there is no cure, and the delight of dealing with software houses insisting they had the cure-all.

### **A change for the better**

It was from the impossibilities of such extremes that an extremely novel idea took form:

Form a new kind of software

company. A company comprised of knowledgeable individuals who really know the problems on the inside. Add to that equal amounts of time, talent and backing, and you can produce software that solves the problems.

Our name is Triangle Software Company. And our corporate logo itself reflects our corporate commitment: we will focus all our efforts, from all sides, on solving the problems inherent in software that is supposed to be the solution.

### **The first proof of our promises**

We invite you to consider what our JCLCHECK™ systems utility package could do for you.

For others it is providing savings in excess of \$1,000 weekly in CPU and I/O time.<sup>1</sup>

JCLCHECK identifies runtime abend situations and all job stream JCL errors before submission for test or production runs. In addition, its access to system information enables JCLCHECK to provide complete and comprehensive production JCL documentation.

It is the ideal solution to software that has been too long a problem.

### **We want to wipe out antacids in your lifetime**

JCLCHECK is only the first of many software solutions you will see from us. Because we truly understand your problems; we are intent on helping you solve them.

We welcome the opportunity to get you doing exactly what our other customers are doing: Jumping for joy.

**Triangle Software Company**

2651 Kentworth Way, Santa Clara, CA 95051 (408) 727-4391

### NCM MODEMS AND EMS-ONE: THE UPTIME TEAM

Keeping your network up and running is what Intertel is all about. And that's why Intertel's new NCM series modems and EMS-One provide the latest in microprocessor technology for network management.

The high-performance NCM1200 and NCM2400 modems offer the exclusive feature of an internal spare modem to virtually eliminate modem failure problems. And with the automatic dial back-up option, the NCM series provides instantaneous communications restoration around the clock. Domestic and CCITT compatibility further ensure uptime for datacom users... anywhere in the world.

For comprehensive network control, an optional diagnostic card interfaces NCM modems to Intertel's EMS-One, SIGMA, and NCS4000 systems. This combination provides remote monitoring, test, restore and management functions throughout the network.

To find out more about the Uptime Team, write or call for our brochure. Intertel, Inc., Six Shattuck Road, Andover, MA 01810. 617-681-0600.

## Singapore Out to Be 'Global City'

(Continued from Page 94)  
many ways other than raising revenues," said Kingan.

Amateur radio, too, is encouraged. "It develops a group of technicians at little cost — people who are available, especially during emergencies. A developing country can profit considerably by it." The islands' premier is a radio amateur who keeps a transceiver on his desk so he can talk to anyone in the country any time, said Kingan, adding — in response to a question — that, yes, anyone can call the premier, too.

### 'Peculiar Country'

"Canada is a peculiar country," its deputy minister of communications Douglas Parkhill said, describing Canada as "a mixture of a highly developed country close to the U.S. border and a developing country in the Arctic." It was the first nation to have domestic satel-

lite systems and was an early enthusiast for cable television, but (like Kingan) Parkhill sees the Arctic's communications future in HF radio.

"The ionosphere is free," Parkhill insisted, "and the equipment cost is low. If only a small fraction of the money from satellite development were put into HF, spectacular developments would happen."

The lessons he feels Canada has learned by being a pioneer are that "to receive is not enough; television viewers must also be producers, to have their own languages, cultures and mores respected. Even videotex needs very good-quality pictures that can serve semiliterate populations. And no single technology can do it all."

David Horton agrees. Vice-president for marketing at GTE Communications Network Systems, he warned, "Don't try to protect the old technology. Cost is so great and obsolescence is so fast, even in the U.S., that it's difficult to justify development. Sharing will stimulate world markets."

Horton said he recently spent a day explaining packet switching to representatives of a country with a government telecommunications monopoly. "They listened, and then said, 'It will kill our telex!' So I asked if they would rather lose telex to themselves or someone else. Now I hear they're putting out a bid for a packet-switching network."

"New technology," he admitted, "will happen whether you want it or not."

## WHEW!

Cincom Systems received 14 awards—more than any other software company—at the recent International Computer Programs (ICP) awards ceremony.

And for each and every one, we want to say thank you to our 4,000 customers worldwide. Because ICP awards are based on sales, and sales are based on your confidence in our products.

Cincom products that earned ICP awards include:

**TOTAL.** The world's largest selling data base management system earned eight awards for eight different mainframe and minicomputer applications, evidence of the unmatched portability of TOTAL. In addition, TOTAL is the only

product ever to receive the ICP \$100 Million Award.

**Series 80 MANTIS.** A major breakthrough in application development technology. MANTIS received the ICP Million-in-One Award for achieving \$1 million in sales in its first year on the market. Remarkably, MANTIS achieved this record in only six weeks.

**Cincom Systems, Inc.**

2300 Montana Avenue  
Cincinnati, Ohio 45211

User Information Hotline: 800-543-3010.  
In Ohio: 513-661-6000.

Also receiving awards were:

**MRPS Manufacturing Resource Planning System,** our closed-loop manufacturing application package.

**TIS** directory driven Total Information System.

**Series 80 T-ASK** on-line interactive query system.

**Series 80 SOCRATES** data extraction and report generation system.

**Series 80 ENV-DATA** on-line end-user data entry system.

At Cincom, we're proud of these awards. But we're prouder of what they mean—that Cincom products consistently measure up to your standards of excellence.

Again, thank you.

## Executive Corner

• Patrick Carlin has joined Data Systems Services, Inc. as vice-president of marketing.

• Joseph J. Francesconi has been named vice-president of marketing, U.S. field operations, at Amdahl Corp.

• Hilma Mortell has been named vice-president and project manager at Informatix, Inc.

• Richard J. DiZinno has been appointed vice-president of finance at Software International Corp.

• Lee Adams has joined Western Business Computers, Inc. as vice-president of marketing.

• James C. Nitz has been appointed vice-president of industry marketing at Applicon, Inc. William T. Schaefer has been appointed vice-president of sales and Michael L. Sipsey has been named director of OEM sales.

# Things that are easier to use do more work.

Video terminals are very personal devices. And many people who use them are not familiar with computers.

So we designed the VT100 and VT132 (for smart, block mode applications) to be as easy to use as possible.

Even friendly.

The keys on the detached keyboard are patterned and sculptured to feel like those on your favorite electric typewriter. Smooth scrolling of text onto the screen allows new data to be reviewed easily. You can

display 80 or 132 columns so you can review the data printed on 14-inch wide reports without wraparound.

Crisp, well-defined characters are easy on the eyes. And to make it easier to isolate information, lines can be made larger and characters can be reversed, brightened, underlined, or even made to blink. A line drawing character set makes video forms look like the printed forms you're used to.

You can even split the screen so new material scrolls smoothly, while other important data, such as column headings or status lines, remain stationary.

And best of all, you can easily customize Digital's video terminals to your own personal preferences straight from the keyboard, and save your preferences in a non-volatile memory. Thus you can configure them to suit a wide variety of work situations for any system supporting asynchronous ASCII terminals.

You would think that, designed as they are for easy use, our terminals would lead a life of ease.

They don't. You'll find they work even harder.

To buy a VT100 or VT132, contact your Digital terminals dealer. For the names of dealers nearest you, call 800-225-9378 (outside the Continental U.S. and in Massachusetts call 617-467-7068) between 8:30am and 5:00pm Eastern time, or contact your local Digital sales representative.

Digital Equipment Corporation, Terminals Product Group, MR2-2/M67, One Iron Way, Marlboro, MA 01752. Tel. (617) 467-7068. In Europe: 12 Av. des Morgines CH-1213 Petit-Lancy/Geneva.

In Canada: Digital Equipment of Canada, Ltd.

## DATA PROCESSING PROFESSIONALS

DATA RESOURCE CORPORATION, headquartered in Atlanta, is a leader in quality Contract Programming and Consulting. Our continued growth in the Southeast and Southwest has created opportunities for versatile Professionals with state-of-the-art skills in Programming and Systems Design.

We are currently seeking individuals with at least 3 years of diversified programming experience, strong technical backgrounds, and who possess the desire to work in various, stimulating Data Processing environments. IMS and CICS skills are of special interest, as are the abilities to travel or relocate.

We can offer you competitive salaries and comprehensive benefits programs, including bonuses and profit sharing. If you've been searching for a growth opportunity with a dynamic and progressive company with a Management team that "puts people first," the DRC is your answer.

(312) 346-9400

For immediate consideration, please call BECKY FINLEY COLLECT at (404) 633-9387, or send your resume to:

**DATA RESOURCE  
CORPORATION**  
1649 Tullie Circle N.E.  
Suite 110  
Atlanta, GA 30329

An Equal Opportunity Employer M/F

## The Logical Choice

Bank of America provides banking and financial services on a large — and small — scale. Whether it's transactions for corporations and government entities or producing a monthly statement for a personal checking account, we handle them all. The scope of our operation offers data processing career options hard to beat anywhere else. If you've been looking for unlimited opportunity, we're the logical choice.

### Electronic Banking Systems

Electronic Banking Systems (EBS) is headquartered in San Francisco. We provide the data processing technology that supports these financial transactions in California, the United States and throughout the world. We offer you great diversity of applications, methods and state-of-the-art technology.

Our mainframe hardware consists of multiple IBM 370/3033s, OS/MVS, JES III and a wide range of minicomputers for specialized services, distributive processing and communications applications. We have the latest in systems development methodologies (IMS FASTPATH, IBM 3800 Laser Printer, MAESTRO, TSO/SPE, MFS, BTS, etc.)

With EBS, you'll find opportunities as a Project Manager, Systems Consultant, Systems Programmer or Applications Programmer. You should be a systems professional

with at least two years experience in large-scale IBM COBOL or Assembler applications. Expertise with PANVALET, LIBRARIAN, EASYTRIEVE, MARK IV or the equivalent is also desirable. If you're interested in maintenance and/or new development work, please look over the following areas.

### Deposit Applications

- ◆ Support checking, savings and time deposit accounts, electronic funds transfer and special bank management reporting.
- ◆ Participate in major upgrades to existing deposit systems.
- ◆ Utilize minicomputers for front end data capture.
- ◆ Develop new testing methodologies for large-scale systems.

### Loan Applications

- ◆ Support commercial, consumer and real estate lending functions throughout California.
- ◆ Develop new major systems in the real estate and commercial loan area using data base and on-line banking.
- ◆ Expand services available using structured methodologies for both the consumer lending and on-line collection functions.

### Credit Card Applications

- ◆ Support both Visa® and Master Charge® accounts from authori-

zation, inquiry and entry through cardholder and merchant accounting, collections and more.

- ◆ Develop and expand large-scale batch and on-line systems.
- ◆ Develop and implement state-of-the-art software quality assurance.
- ◆ Work with small-scale applications using Bell and Howell, Burroughs, DEC, IBM and UNIVAC minis.

### Branch Network Systems

- ◆ Support the research, design and development of on-line banking services delivered to customers and our California branches.
- ◆ Develop IMS on-line application systems in the areas of customer account inquiries, administrative message services, automated tellers and other electronic banking services.

### Additional Applications

- ◆ Support the research, design and development of a wide variety of other applications including personnel/payroll, stock transfer, lease accounting, trust accounting and money transfers.

### We're worth your time

We offer competitive salaries and benefits, outstanding training facilities and an excellent relocation package. If you're looking for a challenging and rewarding professional environment, you can see why we're the logical choice.

Send your resume to the EBS Recruitment Department #3442-A, Bank of America, P.O. Box 37000, San Francisco, CA 94137. We are an equal opportunity employer.

Responsibilities will include the design, development and troubleshooting of various software packages for data communication equipment and systems.

#### Software Customer Support Engineers

BS in Electrical Engineering, Computer Science, Math or Electronic Technology. 1-3 years experience in assembly language and cobol programming required. Experience with IBM operating systems in a large scale IBM system a definite plus. Must be able to travel and enjoy customer interface. Responsibilities include customer support and troubleshooting of data communication equipment and systems.

### PRODUCTION/QUALITY ENGINEERS

#### Production Engineers

BSEE ET with 2 years experience in the design and development and writing of various test methods and procedures for digital and analog equipment. Familiarity with modern test and data communication equipment highly desirable. Responsibilities include the development of test methods, procedures and documents for various data communication equipment.

#### Quality Engineers

BSEE ME with 2 years experience in the development of systems to measure the quality level of procured material and manufactured items. Responsibilities include the definition of methods to be used by inspection personnel to assure conformance to standards.

#### ATE Programmers

BSET CS EE with 2 years experience in the test, test development, troubleshooting and repair of circuit board assemblies using Gen Rad 1795 or 2270 Automatic Test Equipment. Must have behavioral knowledge of TTL, CMOS and linear circuit devices. Responsibilities include the development of computer programs for various Automatic Test Equipment.

### DESIGN ENGINEERS

B3 MS EE with 3 to 5 years experience in digital logic design including experience in microprocessor hardware software design. Knowledge of communication protocols required. Responsibilities include design and development of key loader module, logic and software design for end to end encryption devices.

BSEE with 3 years experience with bit slice architecture and microprogramming. Knowledge of IBM mainframe environment with some communication interface desirable. Responsibilities include the design, development and support of various data communication equipment.

BSEE with at least 2 years experience of digital design TTL LS S and/or processors TI 990 or 9900. Responsibilities include circuit design for various data communications equipment.

BSEE with 4 years experience in digital design. Additional experience with microprocessor at both a hardware and software interface level required. Responsibilities include the design and development and support of various developmental data communications equipment.

BS MS EE with 1-3 years experience in digital and analog design of communication and signal processing equipment and systems. Knowledge of modern operation and application helpful. Familiarity with common digital and analog IC chips required. Fundamentals of microprocessor application desirable. Responsibilities include the design and development of various data communication and signal processing equipment.

BSEE ET with 1-3 years experience in troubleshooting at system circuits and component level. Experience with the redesign or modification of digital/analog circuits also required. Responsibilities include the troubleshooting and modifications of various data communication equipment and systems.

You'll work in an atmosphere of professional freedom where only your imagination may turn the key to tomorrow's systems. You...and your family...will live in one of the most pleasant, safe, clean and affordable communities in America, enjoying an average year 'round temperature of 74°.

Whether your recreational interests include major sports, art, theatre, boating, fishing or just plain relaxing in a climate where much of America pays to vacation, you'll find it all...and...more in the Tampa Bay area.

Because of Paradyne's phenomenal growth, we also have exciting career positions open for technicians, drafting, administrative and administrative support, plus other related openings typical to the electronic industry.

Rush your resume in confidence today to:

James C. O'Kelly  
Paradyne Corporation

# BE PART OF THE SOLUTION

As we look to available resources for the years to come, the country's need to develop safe and economically feasible energy is obvious and we're doing something about it. The Seabrook Nuclear Power Station, a 2-unit PWR station currently under construction in Seabrook on the New Hampshire coastline presently has openings for the following degreed professionals. Seabrook Station is currently in the early design stage for a large on-line, integrated system to support the operational information needs of the Plant. If you're one of the best in your business, come and talk with us about your future.

## SENIOR SYSTEMS ANALYST

Define user requirements for EDP systems. Responsible for all facets of assigned project scheduling and personnel management of Systems Analysts, task members from various disciplines and outside consultants. Individual must be able to manage the activities of multiple projects and associated staff. Position requires 3 to 6 years' analytical and programming experience.

## TRAINING COORDINATOR/DOCUMENTATION SPECIALIST

Use independent judgement in determining training objectives, course content/organization and best media for presentations. Will develop handouts and exercises, conduct seminars and teach pilot courses on application systems and development methodologies. Responsible for preparing and maintaining systems and operations documentation and for supporting a current documentation library. Position requires 2 to 4 years' experience, a solid knowledge of systems and design concepts, and background in educational training.

## SENIOR DATA BASE ANALYST

Assist the DBA with the establishment and maintenance of the Seabrook Station Data Base. Responsibilities include security controls, user training/interface, operational guidelines and integration of systems through data base design. Position requires 1 to 3 years' experience in the design and development of large data base systems. IDMS/IDB/CICS experience very desirable.

We are prepared to offer competitive starting salaries, full benefits and relocation assistance. Please send resume outlining education, experience and salary details in confidence to:

## ACADEMIC COMPUTING CENTER DIRECTOR

The University of California, Riverside, invites applications and nominations for the position of Academic Computing Center Director. Responsibilities include (1) directing the activities of the Center — a campuswide organization providing diversified computing services in support of instruction and research, including real-time instrumentation; (2) interacting closely with faculty in the operation, design, and development of academic computing facilities and programs; (3) providing liaison between the Center and computing activities in individual academic departments; and (4) developing and implementing plans to meet future computing objectives of the campus.

**Qualifications:** B.A., B.S. or higher degree required. Experience and broad interest in hardware and software applications in a University environment required. Demonstrated communication, managerial, and planning skills. Salary range approximately \$32,700 to \$46,000, depending on experience and background. Excellent benefits package.

Submit resume and the names of three references by June 12, 1981, to:

Eleanor Montague  
Vice Chancellor —  
Administration

4115 Administration Building  
University of California  
Riverside, CA 92521

## Data Processing Professionals

### Career Opportunities

Ernst & Whinney, the international public accounting firm, is expanding its National Data Processing Group to develop a firmwide Management Information System. This on-line database system, which will service our staff of over 9000 people in 112 U.S. offices, is currently in the very early stages of design - there is ample time for you to become involved on the "ground floor".

We seek creative professionals who are motivated to excel and who crave constant challenge and diversity in their work. These are career opportunities which will expand your skill base and will provide you the chance to develop your individual interests. To accomplish our tasks we have implemented IMS/DC, on-line programming, and Mark IV on dual IBM mainframes, one devoted to a test environment.

These are career opportunities with a firm whose reputation is stability and continuous growth. If you have five or more years appropriate experience and a Bachelors Degree, please send a resume, or call Mr. Jon Briney (COLLECT) - (216) 861-5000, Ext. 5133 to confidentially discuss these opportunities in more detail.

## WASH. D.C. TELOS

We are a nationwide company which provides on-site technical support to organizations engaged in developing complex computer based systems. Our Washington, D.C. requirements are expected to commence around July, 1981. The following areas of expertise are desired:

- Burroughs 7807
- Internals
- Systems design
- Application development
- ALGOL
- Realtime systems
- Database/DMS II
- Automated Text
- Message Handling
- Data analysis, reduction, report generation
- Communication (NDL)

If you are interested in working in the Washington, D.C. area and have one or more of the above areas of expertise, give us a call. We have many challenging positions with excellent salaries and benefits. Please call Dick Brewer (collect) or send resume to:

### TELOS CONSULTING SERVICES

3420 Ocean Park Blvd., Suite 3050  
Santa Monica, California 90405  
(213)450-2424

An Equal Opportunity Employer M/F

Four states account for two-thirds of the manufacture of U.S. electronic computing equipment. Minnesota is one of them, and the Major Systems Division of Sperry Univac, with the 1100-product line, has played a key role in the growth of the Twin Cities as a major electronics center.

Engineers &amp; Programmers:

## WE WANT TO HEAR FROM YOU.

As a recognized leader in the design and manufacture of large-scale computer systems, we can offer you technical challenges and career growth. Excellent opportunities are available for engineers and programmers to join in state-of-the-art development at Sperry Univac Major Systems Division.

### LOGIC DESIGN ENGINEERS

Positions are available in several development programs for experienced Logic Designers from associate to principal levels. A BS degree in Electrical Engineering or Computer Engineering or equivalent is required plus 3 or more years of relevant experience in one of these areas:

#### I/O Design:

Design experience in I/O channels, control units, communications or related equipment is required. Experience in VLSI logic design or microprogramming is desirable.

#### Processor Design:

Design experience in main frame processors, logic and gate arrays or micro-coding is required. Experience in simulation and test checkout is desirable.

Advanced Degrees in both areas are desirable.

### PRINCIPAL PROGRAMMERS

Several top level positions in the systems design and definition of computer system products are available in the areas described below. A BS degree in Computer Science, Math, Electrical Engineering or equivalent is required plus 7 or more years of applicable experience. Advanced degrees and additional experience is desirable.

**Computer Architecture** experience is required in the design and implementation of computer hardware or software systems plus a detailed knowledge of series 1100 hardware and software or equivalent systems.

**Performance Evaluation** experience is required in computer related analysis including modeling, analytical or simulation language, capacity planning systems design, software development/evaluation or hardware design.

**Software Systems Design** experience is required in operating systems or data management software development or support. Desired experience includes data base administration, time sharing, transaction processing, query languages, end-user facilities and performance and modeling.

### TEST PROGRAMMERS

Our 1100 design team has current openings for programmers or engineers who will generate Design Verification Routines for large scale, state-of-the-art data processing equipment.

If you have a BSEE, BSCS or equivalent background plus relevant experience or comprehension of computer hardware/software relationships, you will find these positions offer challenging work, excellent resources and an atmosphere of creativity.

### QUALITY ASSURANCE ENGINEERS

Several positions are available to individuals with at least 2 years experience in quality assurance/control. A degree in Mechanical Engineering, Chemical Engineering, Physics or equivalent is required. Responsibilities include developing incoming inspection procedures, sampling plans, and special quality programs unique to incoming material. In addition the incumbent will develop procedures for evaluating thermal conductive paste plastics and PC board laminates.

### PRINCIPAL FACILITIES ENGINEER

This key position requires a BS in Mechanical Engineering plus 8 years professional experience in HVAC systems design. In addition to designing mechanical environmental systems the incumbent will prepare related specifications, cost estimates, and implementation schedules. Additional responsibilities will involve establishing programs to advance plant engineering methods and techniques and keeping abreast of the latest developments in the field.

(214) 867-0030

NOTE: Additional considerations made to those who are capable of extended or frequent travel.

Experience in other nonprocedural type languages such as RAMIS II and FOCUS would also be of interest in our NY/NJ operation.

## INTERESTED IN "TOMORROW'S TECHNOLOGY TODAY"?

If you answered "NO"  
Disregard these opportunities!

However, if your response is positive, we urge you to read on. We're ANACOMP, the innovators who in just 12 years have become one of the largest publicly held corporations in the competitive computer services industry. Specializing in software development, on-line services, facility management, minicomputer systems, and micrographics; we answer the ongoing needs of both government and private industry sectors. While our scope is already extensive, our potential is virtually limitless. Yours may be, too!

Right now, we're seeking bright, ambitious and aggressive data processing professionals for the following locations and positions:

### SARASOTA, FLORIDA

divisional headquarters for financial services and software development

### CAN YOU DESIGN AND IMPLEMENT A SYSTEM WITH:

- Several million accounts • A million transactions a day
- Real time • Distributed Processing • Data Base
- Data Communications • On-line

### Software Simulation Modeler

Minimum 2 years experience in software simulation. We desire background in some of the following: "Best 1" performance monitor experience, Data Base access time, MVS overhead, T.P. network and forecasting exposure "Crystal."

### Analysts/Programmers

Minimum requirements are 3 years IBM COBOL with some experience with IMS, IDMS, or CICS.

### Software Specialists (IMS or MVS)

Minimum 3 years experience in the generation, installation and support of IMS or MVS. We desire a background in some of the following: G.I.S., strong T.P., Performance Tuning, SMP-4 and OS JCL.

### Metacolib Specialists

Entry level requires a minimum 1 year Metacolib and some Data Base experience. Advanced positions require a minimum 3 years Metacolib experience and at least 1 year developing complex macros.

### KANSAS CITY, KANSAS

### Project Managers

A minimum of 7 years experience in managing projects, preferably hospital applications, administration functions, and management of analysis and programmers in a dynamic environment.

### Systems Analysts

Experience in designing and installing hospital applications, preferably on large scale computers.

### Analysts/Programmers

A minimum of 3 years experience designing or developing systems. On-line or hospital systems helpful.

Individuals selected for the above positions will design and implement a hospital information system in our new facility.

ANACOMP, INC. recognizes the talents of each employee with highly competitive salaries plus merit bonus plan. Our benefits include: relocation expense plan, dental/medical insurance, life insurance, tuition reimbursement and profit sharing plan (with 120% company contribution). As we expand, you can expect unprecedented professional and personal growth opportunities with a company that is on the way to the top... If qualified or interested in any of the above positions, please respond to:

Frank Divito  
813-366-2600  
(collect calls accepted)

### Assistant Director for User Services Colorado School of Mines Golden, Colorado

**Duties & Responsibilities:**  
Assist students and faculty in making effective use of computer resources in instruction and research. Position involves managing a small group of professionals providing consulting to faculty and students concerning software problems, conducting user training seminars, and maintaining computer program libraries and related user documentation. The person selected for this position will report to the Director of the Computing Center. Additional appointment as a faculty member in an Academic Department is available.

**Qualifications:**  
Possession of an advanced degree required in Engineering, Math, Science or closely related field. Background in FORTRAN applications required.

**Experience:**  
Preferably two or more years of academic experience. Knowledge of interactive computing utilizing a timesharing system (DECsystem-10 helpful). Demonstrated experience managing a small group of technical staff within an academic computer center desired. Data base management experience would be helpful but not essential.

University Computing Equipment: DECsystem-1091, DECsystem 2020.

This is a 12 month position. Salary based on experience and qualifications. Position available July 15, 1981. Please send resume in confidence to Dr. Michael B. McGrath, Computing Center Director, Colorado School of Mines, Golden, CO 80401. Application deadline is June 15, 1981.

Equal Opportunity/  
Affirmative Action Employer

## Data Processing

Tri-State, a wholesale supplier of electric power located just north of Denver, has the following career opportunities immediately available.

### PROGRAMMING COORDINATOR

Will plan, organize and monitor programming projects and supervise programmers and programmer/analysts. Requires a B.S. in Management Information Systems or related field, and four years programming and/or systems design experience. Project leader experience desirable. Strong FORTRAN programming skills a must.

### ENGINEERING SYSTEMS ANALYST

Analyzes and evaluates user requirements and designs and implements systems and procedures for engineering applications. Requires a B.S. degree in Computer Science or related field and three years systems programming experience.

Along with growth potential, we offer competitive salaries and educational reimbursement. Be sure to inquire about our outstanding combination of benefits, including fully paid medical, dental and life insurance, retirement and savings program. Submit your resume today to:

## LOCAL INTERVIEWS FOR CAREER OPPORTUNITIES IN CALIFORNIA

Northrop Aircraft Division is responsible for research, design, development, and manufacturing of tactical aircraft that will meet the ever-changing national and international defense requirements. We are located in Hawthorne, California in Los Angeles County. You can be a part of Northrop's future and advance your own. Several positions are available in the following areas:

### SIMULATION SOFTWARE ENGINEER/PROGRAMMER

Senior persons experienced in the development of real-time simulation for testing and evaluating avionic systems. This simulation uses the latest processors (VAX 11/780) and graphics equipment to completely simulate an aircraft in dynamic flight, the environment in which the aircraft flies, various math model representations of radar, inertial navigation and other avionic elements. Must have knowledge of FORTRAN, VAX/VMS, PDP-11/RISX and experience in real-time programming. BSEE or equivalent and 5 years experience is required.

### SOFTWARE ENGINEER

Requires broad background in design and development of real-time software for embedded computer networks as related to advanced integrated avionic systems. Responsibilities include translation of systems/software requirements into a practical but effective design, and mechanization of this design using current techniques and well-defined standards and procedures. Experience with medium scale computer and military standards such as 1589 (J73 Compiler), 1750 (Instruction Set Architecture), and 1553 (Communication Protocol) is desired. These positions requires a degree in CS, EE or related field.

Now is the time for you to become part of our success. We will fly you to California (travel & accommodations paid) for your interview, or we will send a representative to your location. Please send your resume including salary history to:

### ASSOCIATE DIRECTOR

**ADMINISTRATIVE DATA PROCESSING**  
East Tennessee State University is searching to fill a key position in its Department of Computer Services. This position reports to the Director of the Department and is responsible for all administrative software development and production for the 10,000 student university; direct supervision of the management of all applications for ADP as well as the development and planning is centralized in this position. The Department of Computer Services supports a heavy on-line IBM software environment and this position includes the responsibility of moving toward a database system environment.

Requirements include a Bachelor's degree in a field related to computing and at least six years experience in administrative data processing software development, two of which should have been in a supervisory capacity. IBM software experience is a plus. ETSU has a hardware center with an IBM 4341 operating under VM/370, DOS/VSE, OS/VSI (soon), and supporting CICS and IMS. Review of applications will begin June 15, 1981 and continue until the position is filled. Send resume to:

Personnel Office  
Box 24070A  
East Tennessee State University  
Johnson City, TN 37614  
An Equal Opportunity-Affirmative Action Employer (M-F).

## Come Join BUNKER RAMO in Connecticut

Ideal for those interested in growth, challenge and diversity plus all the pleasures of delightful New England living.

Increasing growth has created outstanding technical career opportunities. We are a leading manufacturer of sophisticated on-line real-time distributed data processing equipment and systems for the world's banks and security exchanges.

Based at our modern Trumbull facility, all positions offer excellent starting salaries commensurate with background and qualifications plus a comprehensive program of employee benefits including generous relocation expenses and NO STATE INCOME TAX.

### Senior & Lead Programmer Analysts

Minimum of 3 years solid COBOL programming experience for large-scale IBM hardware i.e., 370, 303X and 43XX. Some CICS and/or DL1 experience preferred. All applicants should possess the capability of assuming project leader responsibilities on specific assignments.

### Senior Systems Programmers & Systems Programmers

At least 2 years experience on large scale IBM hardware, exposure to CICS DL1 systems and possess a working knowledge of DOS/VS, ALC, macro coding and VSAM. Most importantly, all candidates should have the desire to work and succeed in this highly technical systems area.

### Software Instructors

The candidates we seek will have a thorough working knowledge of Assembly language programming, ideally for mini computers, and good exposure to hardware and operating systems. Prior technical teaching experience is especially important as is the ability to communicate effectively in both written and oral form. Fluency in Spanish a plus. You will be responsible for developing and implementing training materials and courses for in-house personnel and customers alike, and enjoy superior access to engineering support and management.

### BSCS (or equivalent experience) is required for all openings

For prompt consideration, call M. Gilbert Lawrence

**203-377-4141**

## SOFTWARE ARCHITECTS

# Make a career of innovation with NCR/San Diego.

Innovation is the sole charter of the NCR Systems Engineering Group at Scripps Ranch, San Diego. That makes it a highly rewarding environment for professionals who can take responsible roles in helping unify interactive and transaction processing, distributed data processing and data base management into a single, comprehensive operating system. And San Diego and its surroundings offer a broad range of housing options and living environments.

As NCR Systems Architects you will work on advanced software architecture and chart the course for our operating systems products through the 1980s. Immediate openings for the following positions:

### Interactive Systems Architect

Participate in defining the architecture for advanced transactional and interactive processing systems for the 80s. Key areas: OS Kernel, performance modeling, VLSI based hardware.

### Secure Operating Systems Architect

Participate in planning and specification of advanced operating systems architecture including high level interfaces, layered structuring and certifiable security.

### Distributed Data Processing Architect

Participate in designing the functionality, the architecture and the protocols for distributed data processing systems.

### Systems Program Manager

Function as a focal point for systems and software product development. Perform planning, coordination and monitoring through the product development.

Background should include an advanced degree in CS or equivalent and 6 or more years of system design/development experience. Salaries will be commensurate with experience and responsibilities. Benefits, including relocation assistance, are what you would expect from an expanding \$3 billion computer company.

For prompt confidential consideration, please send resume and salary history to: Doug Sjoberg, Personnel Resources, Dept. F-54, NCR Corporation, Systems Engineering/Scripps Ranch, 9900 Old Grove Road, San Diego, CA 92131.

### TAKE ANOTHER LOOK AT SAUDI ARABIA

You have most likely been noticing our ads over the past couple of years and been wondering if it's all as good as it sounds. Well, now is the time to stop the speculation and give us a call to really check it all out.

Our client company can offer you the best overseas salary and benefit package going, as well as, participation in one of the premier Data Processing installations in the world.

If you have proven experience in any of the following areas, we would like to hear from you.

---- SYSTEMS PROGRAMMERS - MVS, VTAM, TSO and IMS  
---- DATA BASE ANALYSTS - IMS, ADF, BFS, HSD, HIDAM  
---- SCIENTIFIC PROGRAMMERS - FORTRAN or PLI  
---- COMMERCIAL PROGRAMMERS - PL1 and COBOL  
---- TELEPROCESSING ANALYSTS - ACF, NCP, ACF/VTAM, NOSF or NCCF

If an overseas assignment does not appeal to you, the same types of positions are available in the Houston office of this oil and gas giant.

For further information, please contact Ada Edwards, or Cliff Reilly at (713) 445-8484 or Ron Timm at (713) 858-8888.

## CAREERS IN DP MANAGEMENT CONSULTING

Nolan, Norton & Company is a rapidly expanding Boston-area consulting firm specializing in the management of data processing in large organizations. We are seeking several professionals with combinations of analytical, data processing, and administrative backgrounds.

At NNC, you will have the opportunity to work with the senior management of FORTUNE 500 companies in addressing top DP management issues:

- DP Strategy & Control
- Data Resource Management
- Distributed Processing
- Technology Planning
- Office Automation

Career positions are available on our consulting staff for candidates with strong analytical and conceptual skills plus an ability to communicate at the senior management level. Positions are available for:

- Management Consultants who work directly with senior client management. An MBA or CPA is highly desirable.
- Senior Management Consultant positions with immediate project management responsibilities are also available for candidates having extensive data processing/consulting experience.

Extensive training in NNC proprietary methods and techniques will prepare you for rapid growth in the firm. Career paths lead to responsibilities in:

- Client Management
- Product Development
- Research Programs
- Project Management

The NNC compensation package includes liberal benefits and performance bonus opportunity. If you are interested in pursuing a career opportunity with us, please forward your resume in confidence to:

Benjamin S. Porter, Principal  
Room 223

Commonwealth of Virginia  
An Equal Opportunity Employer, M/F/H

### Approximately \$45,000

In 1978, the Department of Health Services of the State of California contracted with Computer Sciences Corporation to design, develop, install, and operate its Medicaid claims processing system. The current system results in payment of approximately six million claims per month totaling several billion dollars annually. On February 28, 1981, that \$130 million contract will expire. To prepare for that day, the Department has created a new position to direct the activities related to: 1) management of a consultant contract for evaluation of the feasibility of alternative methods of performing Medicaid claims processing; and 2) development of a plan for and management of the implementation of the selected method. If you are interested in this challenging position, send your resume with references to:

State of California  
Department of Health Services  
714 P Street, Room 1293  
Sacramento, CA 95814  
Attn: Deputy Director for Administration

Applicants should have at least five years of progressively responsible management experience related to: 1) competitive facilities management procurement processes; 2) facilities operation utilizing service contracts; 3) development of bid packages, evaluation of bidder proposals, and contract negotiation; 4) automated systems management; or 5) administration of Medicaid claims processing systems.

### SYSTEMS PROGRAMMER

## COMPUTER PROFESSIONALS

Rensselaer Polytechnic Institute, located in upstate NY, is expanding its computing center staff in support of continuing improvements in academic computing and seeks experienced professionals in the following areas:

### ASSISTANT DIRECTOR FOR ACADEMIC COMPUTING

Will provide innovative organizational and technical leadership in planning and resource management for a large academic center, utilizing an IBM 3033 with Michigan Terminal System (MTS) Software. Coordination through managers of a strong professional staff of academic computing consultants and systems programmers who support instructional and research computing. Plans and monitors evolution of progressive areas such as microcomputers, textprocessing and electronic mail in support of university programs. This senior position requires significant management experience and sensitivity to broad aspects of academic computing, and ability to interact effectively with faculty, students and staff. University teaching research and knowledge of MTS highly desirable.

### MANAGER, ACADEMIC SERVICES

Reports to Assistant Director for Academic Computing, manages highly professional staff of academic computing consultants who provide support with special emphasis in mathematics, engineering, and other areas of high technology educational and research use of computing. Advanced degree; teaching, and experience in academic computing desirable.

### MICROPROCESSOR CONSULTANT

Will provide technical support to develop the use of microprocessors in the academic and research programs. Required background includes strengths and experience in both hardware and software with a variety of personal computers and microprocessors. Considerable contact with faculty and students.

### SYSTEMS SUPPORT SPECIALIST

Will enhance and support major areas of the 3033 operating system and related software. Prior experience with the internals of an operating system is required.

### NETWORK AND COMMUNICATIONS SPECIALIST

Will participate in the design, implementation and support of a communications network using a mixture of "ether" and X.25 technologies using the IBM 3033 as one of several hosts. Previous communications and network design experience is required.

### COMMUNICATIONS SYSTEMS PROGRAMMER

Will participate in the support and enhancement of communications software interfacing high speed asynchronous terminals and computers to the 3033 and in the extension of the software to serve as a local multi-node packet switching network supporting several intelligent hosts and network interface machines. Knowledge of DEC PDP-11 assembler language and previous experience with communications hardware and software is required. Familiarity with pascal and IBM 370 assembly language is desirable.

Related degree desirable for all positions. RPI offers salaries commensurate with experience and a complete benefits package which includes advanced educational opportunities.

For immediate consideration, interested and qualified applicants should submit a resume, 3 professional references and salary requirements by June 1, 1981, to:

Thomas F. Malloy, Employment Manager  
Rensselaer Polytechnic Institute  
Troy, NY 12181

Job Opening Notice

## Systems Analyst-Project Leader

Analyzes business procedures and problems to refine data and convert it to programmable form for electronic data processing. Studies existing data handling systems to evaluate effectiveness and develop new systems to improve production or work flow as required. Conducts special studies and investigation pertaining to development of new information systems to meet current and projected needs. Operates IBM 8080, 81700, 86800. Masters degree, with major field of study Electronic Data Processing, required. Two years experience required. \$18,000/year. Programmed Closing System, INC., 3920 Atlanta Street, Smyrna GA 30080.

## Data Processing Faculty Position

Teach courses in computer languages and data processing. Masters degree in related field required. Preference given to those who can also teach basic accounting or math and have had some business and/or teaching experience. Academic year position available 9/14/81. Rank and salary dependent upon background and experience. Send resume by June 1 to

Dr. William Bockley  
Albany Jr. College  
Albany, Georgia 31707

AA/EDE

## SYSTEMS PROGRAMMER

The Department of Computer Services at East Tennessee State University is seeking a Systems Programmer with a degree in Computer Science and experience with IBM operating systems, preferably DOS/VSE and/or VM/CMS. The position is part of a three (3) member team responsible for support of VM, DOS, OS and other software on an IBM 4341. Review of applications will begin June 15, 1981 and continue until the position is filled. Send resume to:

**MISSISSIPPI CENTRAL DATA PROCESSING AUTHORITY**

Sealed proposals will be received by the CDPA, 508 Robert E. Lee Building, Jackson, MS 39201 for the following data processing equipment and services:

**Request for Proposal Number 648:** due 3:30 p.m., Wednesday, June 3, 1981 for the acquisition of a controlled-access security system for a teaching hospital complex.

**Request for Proposal Number 649:** due 3:30 p.m., Tuesday, May 26, 1981 for the acquisition of a disk upgrade for an Amdahl 470/V8-II and IBM 370/158 shared DASD system currently configured with 12.8 gigabytes of CDC disk storage.

**Request for Proposal Number 650:** due 3:30 p.m., Tuesday, June 2, 1981 for the acquisition of an upgrade to an existing CDC mass storage system operational in an IBM System 370 environment.

**Request for Proposal Number 651:** due 3:30 p.m., Tuesday, May 26, 1981, for the acquisition of disk, memory, diskette magazine, and peripheral components upgrade for an existing IBM System 34 installation at a junior college.

Detailed specifications may be obtained from the CDPA office. The CDPA reserves the right to reject any and all bids and proposals and to waive informalities.

## SPACED OUT?

Show time? Current booth  
 cramming your style? Try ours  
 on for size. A luxurious 20' display,  
 it is ideal for a "contemporary"  
 company looking to match its  
 sophisticated image. Framed by  
 two large cylindrical columns of  
 brushed aluminum and paneled  
 in Royal Blue Splush, it comes  
 with backlit headers, 2 light  
 boxes with 3 "eyeball" lights  
 each, positioned at the base  
 of the booth; a 10' x 20' match-  
 ing plush carpet, 2 literature  
 stands with plush covering  
 and brushed aluminum trim, and  
 brushed aluminum railings. Just  
 change the header graphics and  
 it's yours. With accessories (fully  
 crated), it's available for \$15,000.  
 Color pictures available upon re-  
 quest. Contact Mr. Slater, Market-  
 ing Director, Charles River Breed-  
 ing Laboratories, Inc., 251 Ballard-  
 vale Street, Wilmington, MA  
 (617) 658-6000.

## BIDS & PROPOSALS

### NOTICE TO BIDDERS

Notice is hereby given that sealed proposals to furnish the following:

SALE OF SURPLUS DATA PROCESSING EQUIPMENT 1981/82: #18  
1) COMPONENTS OF A DEC SYSTEM 10  
2) ASR-33 TELETYPES

will be received by the Board of Cooperative Educational Services of the Third Supervisory District of Suffolk County at their offices at 507 Deer Park Road, Dix Hills, Suffolk County, New York 11748 on

Thursday, May 28, 1981 @ 2 P.M.

time in effect, and then at said time and place publicly opened and read aloud.

"PROPOSAL FORMS" showing specifications and "INSTRUCTIONS TO BIDDERS" may be obtained on and after May 1, 1981 at the offices of the Board of Cooperative Educational Services at the above location Monday through Friday between the hours of 9 am and 4:30 pm.

The Board of Cooperative Educational Services reserves the right to reject any or all proposals and to waive any informalities. All proposals must be made in full accordance with the "INSTRUCTIONS TO BIDDERS" and on designated "PROPOSAL FORMS."

Frederick J. Ricker, Purchasing Agent  
Board of Cooperative Educational Services  
Third Supervisory District-Suffolk County

### IBM-GSD APPLICATION SOFTWARE SWAP

We at Harris Data Service, Inc. are seriously seeking cross-marketing distributorship arrangements for quality business application software products. We wish to locate distributors for our products as well as become a distributor for others. We offer a fine national organization with nine years of reputation in the service support role of IBM-GSD products. Our service bureau, data entry, programming support, systems consultation, package sales and business forms divisions offer a full-service advantage to the IBM-GSD public and to fellow software firms who are searching for an effective marketing outlet.

Serious associates should please call or write in confidence to us. Let us help each other rise to the demands of the public marketplace. Thank you.

## NEW LIFE FOR 1401 PROGRAMS

CS-TRAN converts your 1401 object programs to COBOL for the main-frame or mini of your choice.

CS-TRAN is the only translator that accepts your object programs, patches and all, yet allows you to include actual COBOL paragraph names and record definitions.

If you'd like more details about new life for your 1401 programs just call or write Russ Sandberg.

C-S Computer Systems Inc.

90 John Street, New York, NY 10038  
212-349-3535

## RFX-11

### REMOTE SITE MAINTENANCE

#### \* REMOTE SITE FILE TRANSFER

RFX-11 provides OEMs with an RSX-11M Utility to maintain and upgrade turnkey systems over a computer-computer modem link. Files are encoded, transmitted, and re-created with identical attributes.

#### \* REMOTE SITE MONITORING

RFX-11 establishes a transparent path from any home site terminal to any remote computer or terminal capable of serial ASCII communication.

#### \* ROBUST UTILITY

Familiar command structure. All terminal types supported. No special interfaces or drivers. No remote site assistance needed. Home site on-line HELP command. Error detection. Re-transmission.

#### \* USEFUL OPTIONS

RT-11 remots. Bootstrap (self installation) onto a remote. VAX emulation mode. Source Code

#### \* LOW PRICE

Basic package price is \$475.

# Financial software so advanced that Marriott wants to keep it a secret.

Marriott. And over 1,000 McCormack & Dodge users.  
Their software is so far ahead they'd prefer we kept the subject  
under wraps.

So let's just say that Marriott uses their McCormack & Dodge  
fixed asset package to control a worldwide asset base, to simplify tax  
processing under the complex Asset Depreciation Range  
regulation, and to pinpoint the most profitable combina-  
tion of depreciation method and IRS regulation.

The rest of the story is public record.

In McCormack & Dodge, Marriott found a soft-  
ware vendor with proven success in the highest eche-  
lons of the hotel and resort industry. Whose client list  
includes no less than 100 of the *Fortune* 500. Plus over  
900 other leading companies, ranging from the oldest  
and biggest to the youngest and fastest growing.

McCormack & Dodge. Where F/A Plus has won  
world acclaim as the ultimate fixed asset system.  
Where only specialists in fixed asset accounting  
are authorized to present and sell the F/A  
Plus package.

And where, in seven out of ten cases,  
prospects who sit down and talk do more than  
just talk. They become customers.

We'd like to show you why.

Please send schedule of free seminars, plus  
information on: ☐ General Ledger,  
☐ Purchase Order, ☐ Accounts Payable,  
☐ Fixed Assets, ☐ Capital Project Analysis
